Silikon (essigsäurefrei!)

Dank der Safety Function lässt sich die gewünschte Höchsttemperatur von z. B. max. 42 °C voreinstellen.

Einjustieren

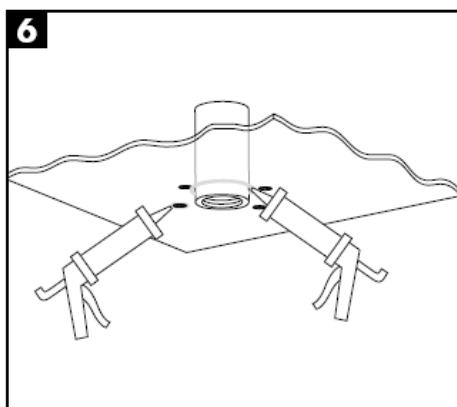

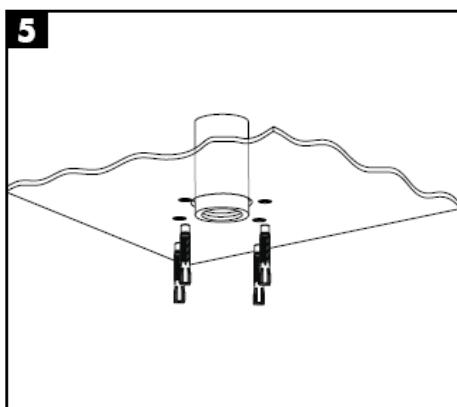

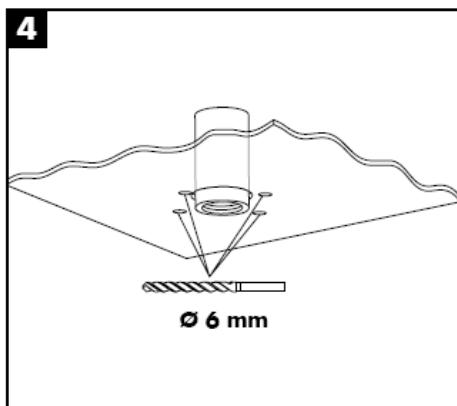

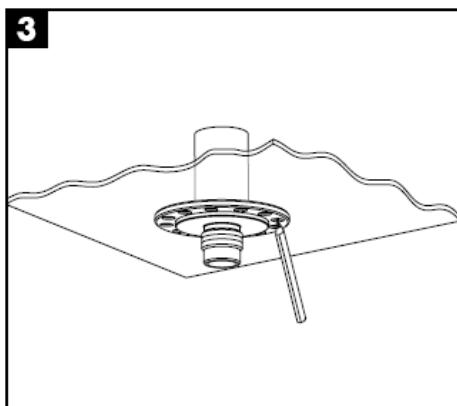

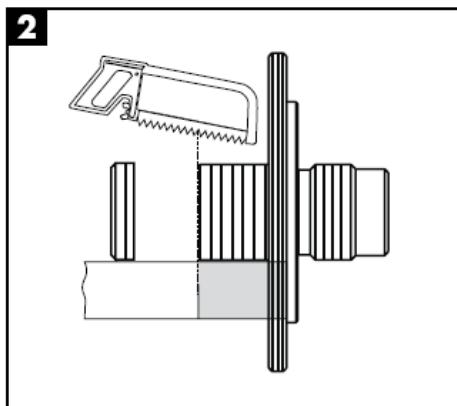

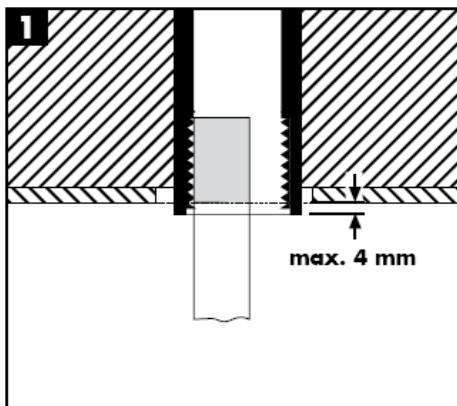

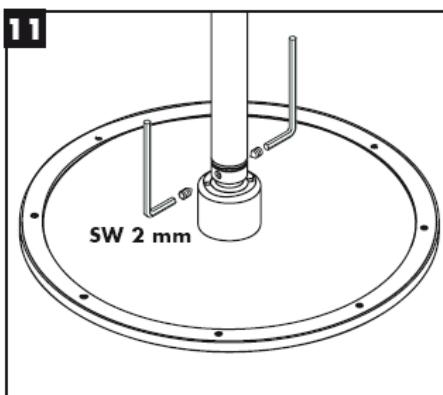

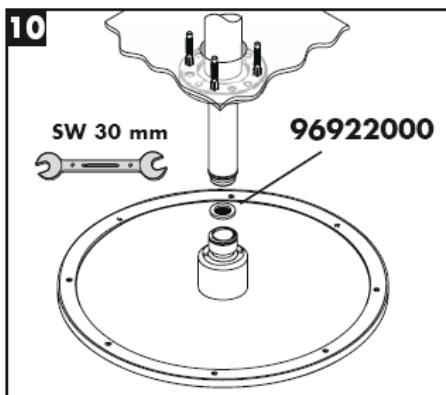

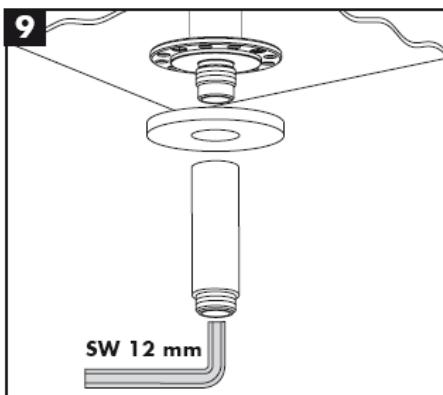

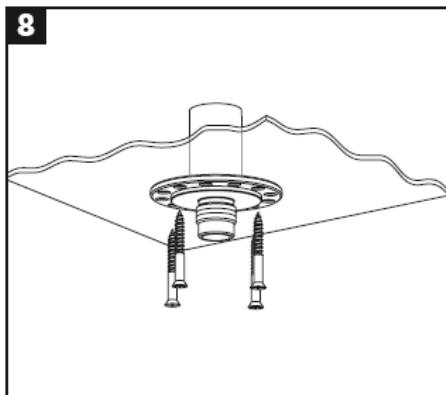

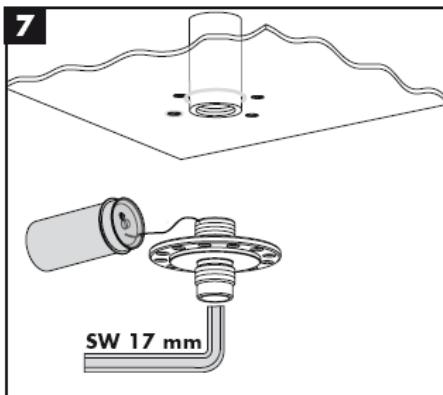

Ist die Brause in Funktion, hat diese zusammen mit dem Brausearm ein Gewicht von ca. 10 kg. Darum darf nur für das Mauerwerk geeignetes Befestigungsmaterial verwendet werden! Die beigelegten Schrauben und Dübel sind nur für massives Mauerwerk.

Es darf nur für das Mauerwerk geeignetes Befestigungsmaterial verwendet werden! Die beigelegten Schrauben und Dübel sind nur für massives Mauerwerk.

Die Ablaufleistung muss ausreichend dimensioniert werden.

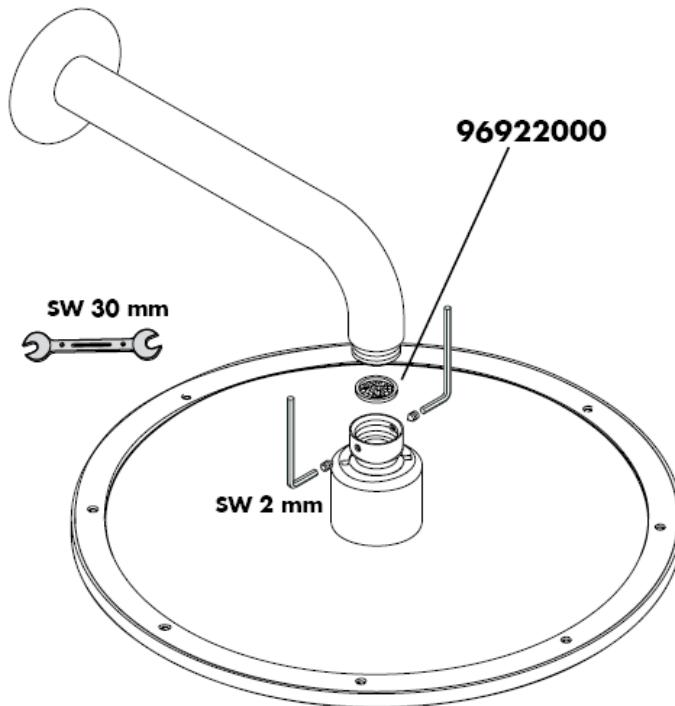

Optimale Funktion nur in Verbindung mit Hansgrohe High Flow Thermostaten garantiert.

---

Die der Brause beigegebene Siebdichtung muss eingebaut werden, um Schmutzeinspülungen aus dem Leitungsnets zu vermeiden. Schmutzeinspülungen können die Funktion beeinträchtigen und/oder zu Beschädigungen an Funktionsteilen der Brause führen, für hieraus ergebende Schäden haftet Hansgrohe nicht.

## Montage

**Achtung!** Die Armatur muss nach den gültigen Normen montiert, gespült und geprüft werden!

### Einjustieren

Eine Korrektur ist erforderlich, wenn die an der Entnahmestelle gemessene Temperatur von der am Thermostat eingestellten Temperatur abweicht. Dabei ist folgendes zu beachten:  
 Skalengriff drehen, bis an der Entnahmestelle Wasser mit 38 °C austritt. Griffschraube lösen, Griff zurückziehen und bis Stellung 38 °C drehen. Griff aufstecken und Griffschraube festziehen (siehe Seite 22).

### Temperaturbegrenzung

Der Temperaturbereich wird durch die Sicherheitssperre auf 38 °C begrenzt (Verbrühschutz).

Wird eine höhere Temperatur gewünscht, so kann durch Eindrücken des Sicherheitsknopfes die 38 °C Sperre überschritten werden.

### Safety Function

Dank der Safety Function lässt sich die gewünschte Höchsttemperatur von z. B. max. 42 °C voreinstellen. siehe Seite 21.

### Technische Daten

Betriebsdruck:	max. 1 MPa
Empfohlener Betriebsdruck:	0,1 – 0,5 MPa
Prüfdruck:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Heißwassertemperatur:	max. 80 °C
Empfohlene Heißwassertemperatur:	65 °C
Durchflussleistung:	ca. 58 l/min 0,3 MPa

## Wartung

Thermostate bedürfen keiner besonderen Wartung. Rückflussverhinderer müssen gemäß DIN EN 1717 regelmäßig in Übereinstimmung mit nationalen oder regionalen Bestimmungen (DIN 1988 einmal jährlich) auf ihre Funktion geprüft werden. Überprüfen Sie bei dieser Gelegenheit auch die Schmutzfänger, welche sich auf der MTC-Regeleinheit (6.1) befinden. Nach Montage der MTC-Regeleinheit (6) unbedingt die Auslauftemperatur überprüfen, wie unter Punkt "Einjustieren" beschrieben. Überprüfen Sie unbedingt zuvor, ob die Warmwasserversorgung eingeschaltet ist und die max. Warmwassertemperatur an der Zapfstelle anliegt.

Um die Leichtgängigkeit der Regeleinheit zu gewährleisten, sollte der Thermostat von Zeit zu Zeit auf ganz warm und ganz kalt gestellt werden.

Silicone (sans acide acétique!)

Grâce à la fonction Safety, il est possible de prérégler la température maximale par exemple max. 42 °C souhaitée.

#### Réglage

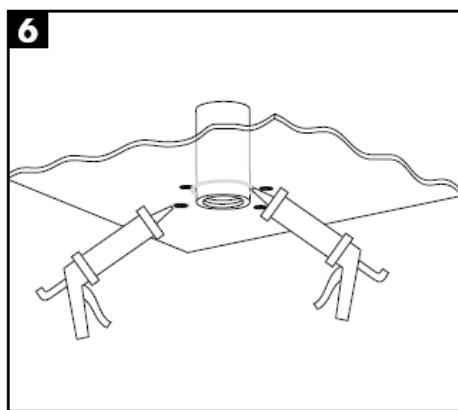

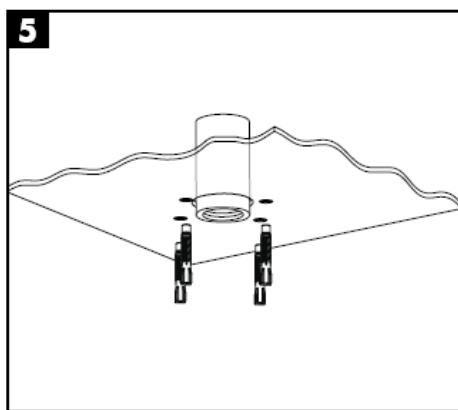

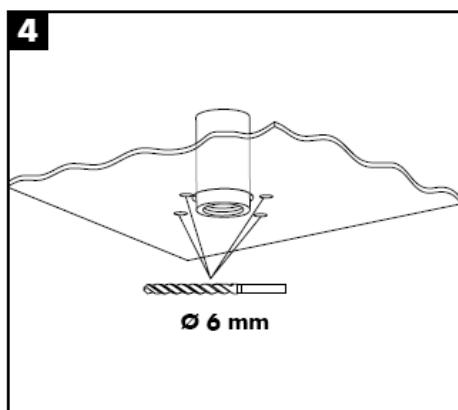

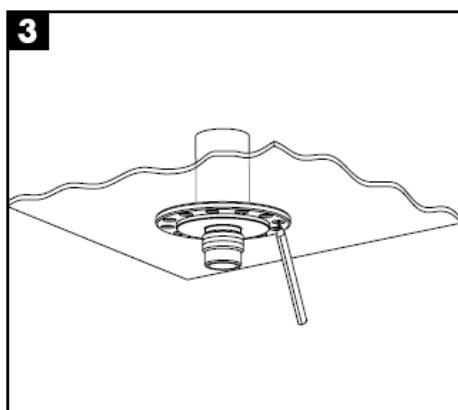

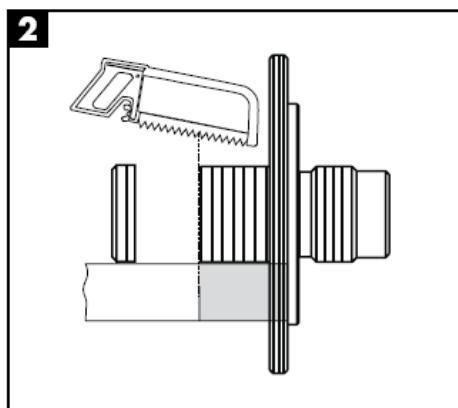

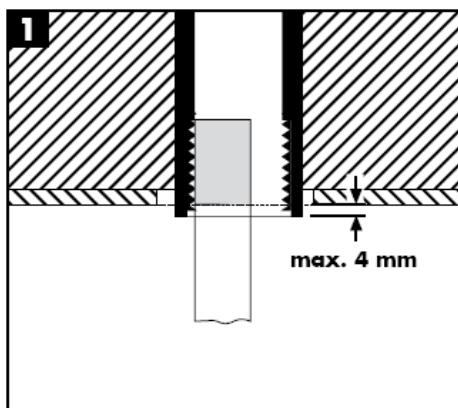

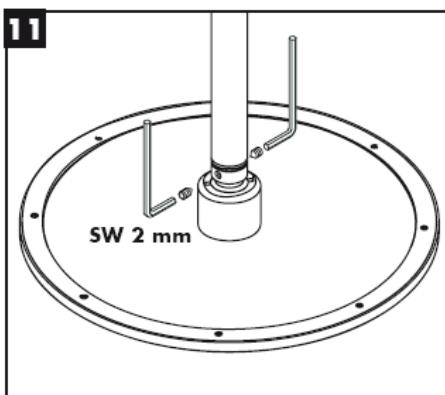

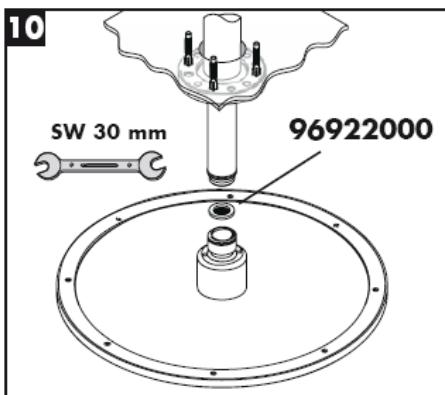

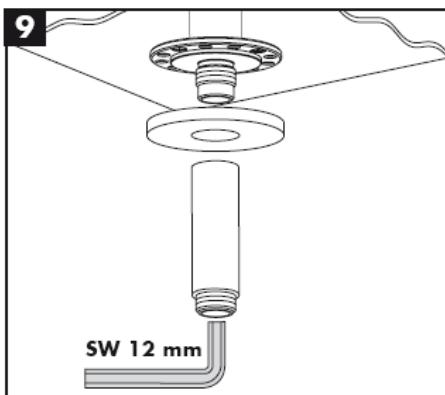

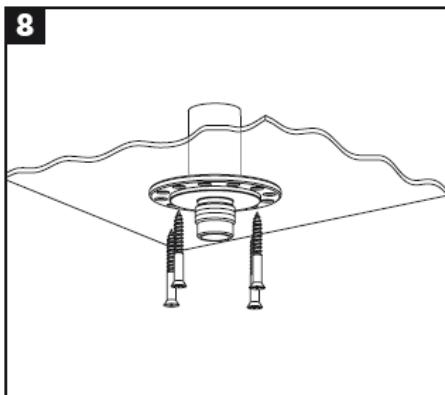

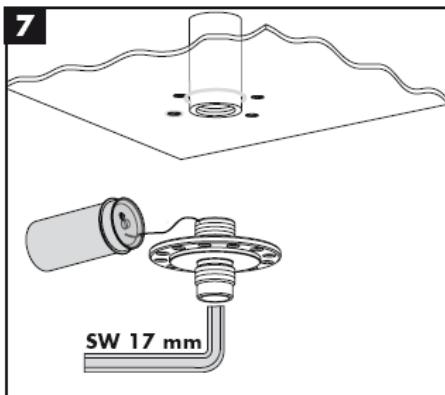

If the shower is in function, it has a weight of approximately 10 kg together with the shower arm. So only use fastening material suitable for the brickwork! The enclosed screws and dowels are only for solid brickwork.

N'utiliser qu'un matériel de fixation adapté à la maçonnerie en place ! Les vis et chevilles incluses dans la livraison ne conviennent qu'aux maçonneries pleines.

Le débit du vidage doit être suffisamment dimensionné.

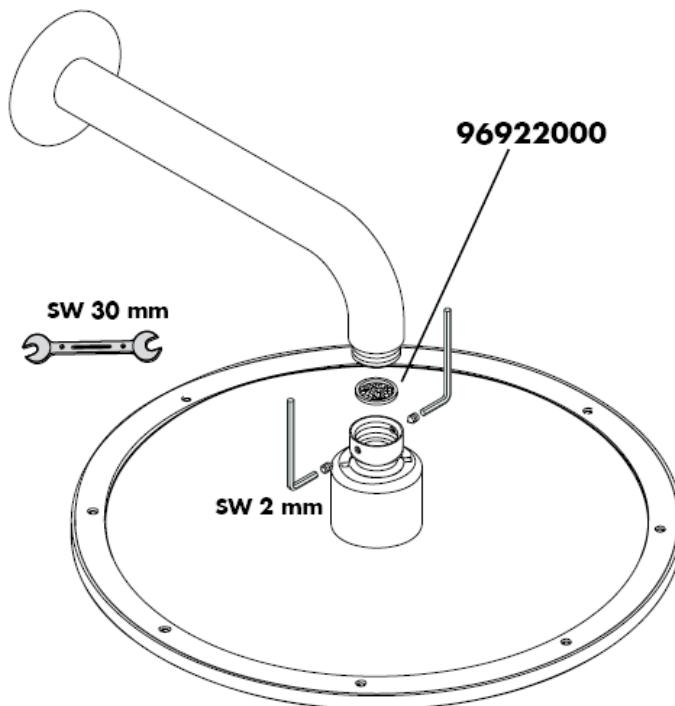

Une fonction optimale est seulement garantie en combinaison avec de Hansgrohe High Flow thermostats.

---

Le joint à filtre fourni avec la pomme de douche à main doit être installé afin de retenir des impuretés du système de conduites. Ceux-ci pourraient influencer le fonctionnement de ce produit et même endommager des pièces mobiles. Des réclamations à la suite de l'usage de la pomme de douche sans joint-tamis de hansgrohe ne peuvent pas faire partie de notre garantie.

## Montage

**Attention!** La robinetterie doit être installée, rincée et contrôlée conformément aux normes valables!

## Réglage

Une correction est nécessaire, lorsque la température mesurée au point de vidange diffère de la température de réglage du thermostat. Dans ce cas, faites la démarche suivante: Tourner la poignée thermostatique jusqu'à ce que vous obteniez une température de 38 °C au point de vidange. Dévisser la vis de la poignée, tourner la poignée jusqu'à la marque de 38 °C, remettre la poignée et vissez la vis de la poignée (voir page 22).

## Limitation de température

La plage de température est limitée à 38 °C par le verrou de sécurité. Quand on désire une température supérieure, on peut dépasser 38 °C en appuyant sur le bouton de sécurité.

## Safety Function

Grâce à la fonction Safety, il est possible de pré régler la température maximale par exemple max. 42 °C souhaitée. voir pages 21.

## Informations techniques

Pression de service autorisée: max. 1 MPa  
 Pression de service conseillée: 0,1 – 0,5 MPa  
 Pression maximum de contrôle: 1,6 MPa  
 (1 MPa = 10 bar = 147 PSI)  
 Température max. d'eau chaude: max. 80 °C  
 Température recommandée: 65 °C  
 Débit: ca. 58 l/min 0,3 MPa

## Entretien

Les thermostats n'ont pas besoin d'un entretien spécial. Les clapets anti-retour doivent être examinés régulièrement conformément à la norme EN 1717 ou conformément aux dispositions nationales ou régionales quant à leur fonction (au moins une fois par an).

Contrôler par la même occasion les filtres qui se trouvent sur la cartouche thermostatique MTC (6.1). Après le montage de la cartouche thermostatique MTC (6) vérifier obligatoirement la température au point de vidange, comme il est décrit pour le réglage. Vérifier absolument auparavant si l'alimentation d'eau chaude et la température maximale se trouvant au point de vidange.

Pour assurer le mouvement facile de l'élément thermostatique, le thermostat devrait être placé de temps en temps en position très chaude et très froide.

## Pièces détachées voir pages 3

Silicone (free from acetic acid!)

The desired maximum temperature for example max. 42 °C can be pre-set thanks to the safety function.

#### Adjustment

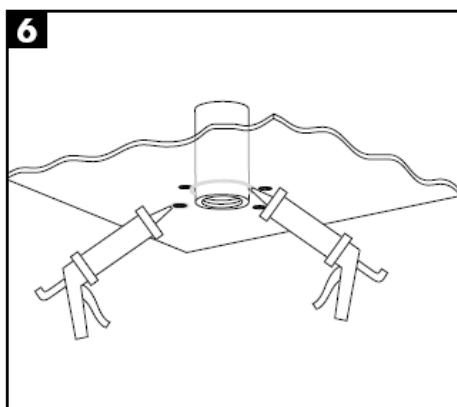

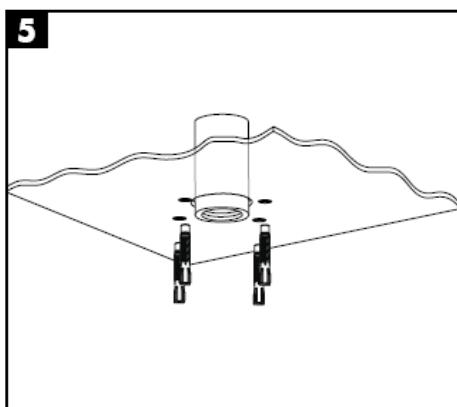

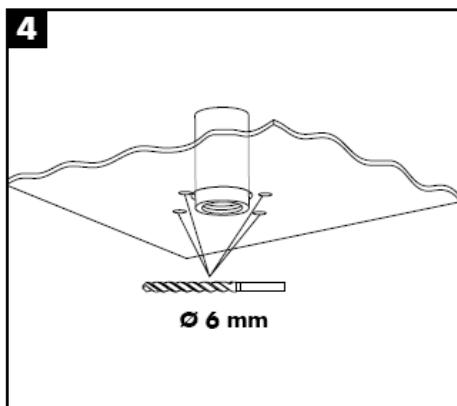

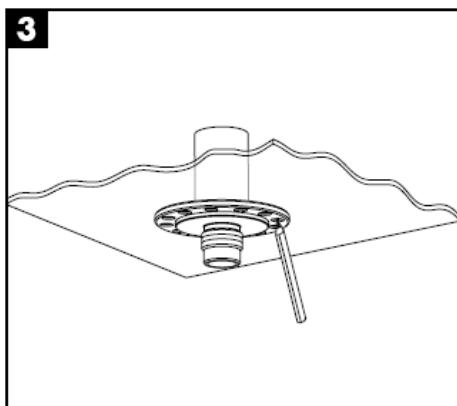

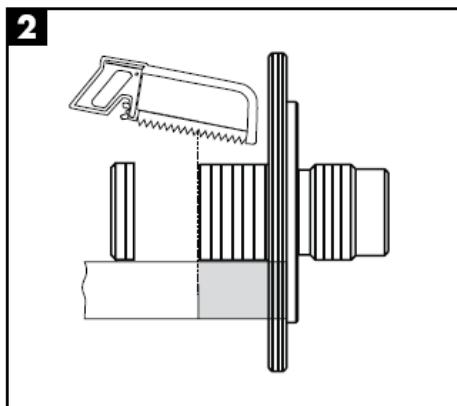

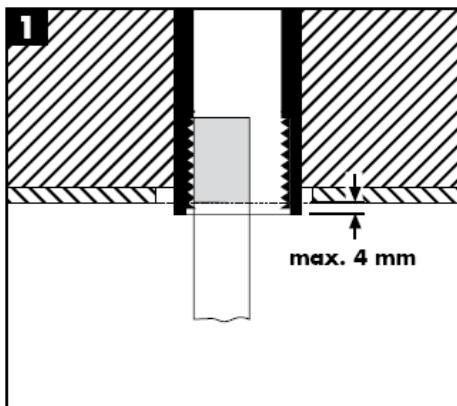

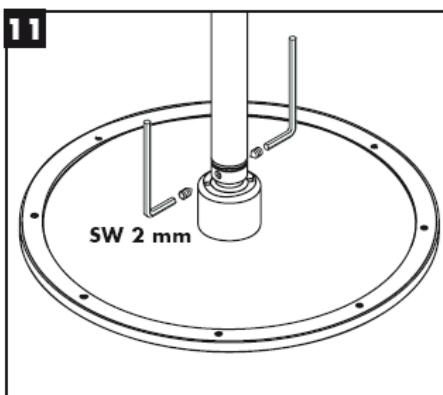

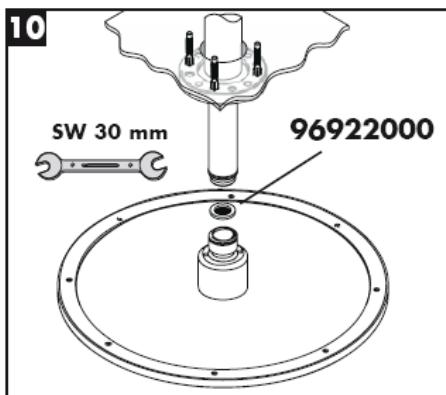

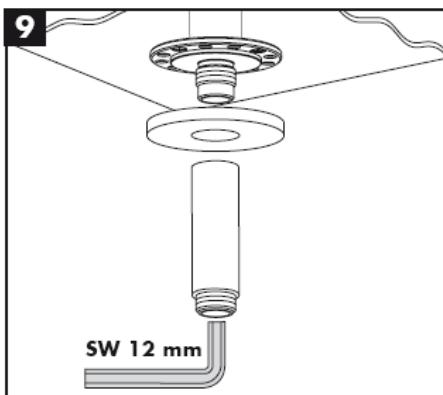

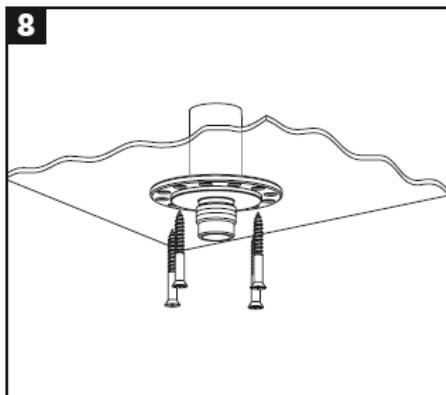

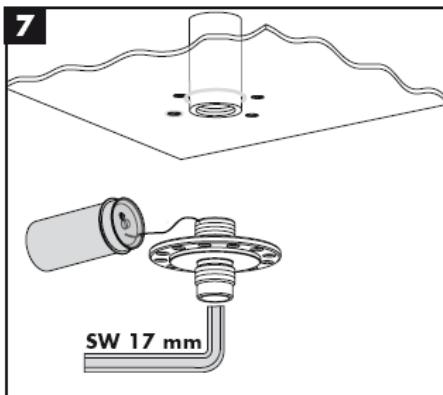

If the shower is in function, it has a weight of approximately 10 kg together with the shower arm. So only use fastening material suitable for the brickwork! The enclosed screws and dowels are only for solid brickwork.

Only use fastening material suitable for the brickwork! The enclosed screws and dowels are only for solid brickwork.

The performance of the waste must be of sufficient size.

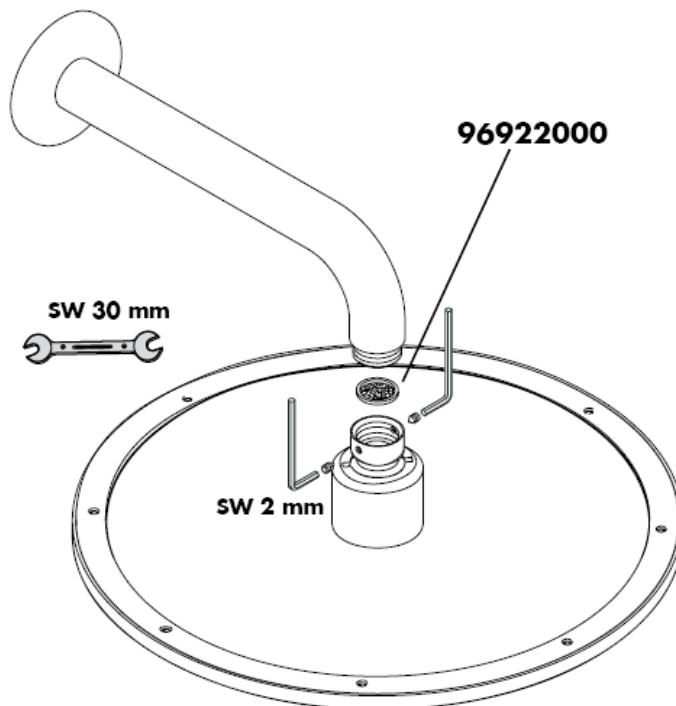

Optimal functioning is only guaranteed with the combination of Hansgrohe High Flow thermostats.

---

The mesh washer must be insert to protect the overhead shower against incoming dirt by pipework. Incoming dirt leads to defects or/and can damage parts of the shower; such caused faults voids all liability and guarantee claims.

## Assembly

**Important!** The fitting must be installed, flushed and tested after the valid norms!

## Adjustment

Correction is necessary if the temperature measured at the take off point differs from the temperature set on the scale. To adjust temperature proceed as follows: Turn the setting knob until water at a temperature of 38 °C comes out of the outlet. Loosen screw of setting knob. Remove setting knob and turn to the 38 °C position. Attach setting knob again and tighten the screw (please see page 22).

## Temperature limitation

The temperature is limited by the safety check to 38 °C (100 °F). If a higher temperature is required, it is possible to override the safety stop by depressing the safety button.

## Safety Function

The desired maximum temperature for example max. 42 °C can be pre-set thanks to the safety function. see page 21.

## Technical Data

Operating pressure:	max. 1 MPa
Recommended operating pressure:	0,1 – 0,5 MPa
Test pressure:	1,6 MPa (1 MPa = 10 bar = 147 PSI)
Hot water temperature:	max. 80 °C
Recommended hot water temp.:	65 °C
Rate of flow:	ca. 58 l/min 0,3 MPa

## Maintenance

There is no special maintenance for thermostats. The non return valves must be checked regularly according to DIN EN 1717 in accordance with national or regional regulations (at least once a year). At this time, please also check the filter (6.1) situated on the MTC-thermo-element (6). After assembling the MTC-thermo-element, it is necessary to check the water temperature at the take off point as described under the headline „adjustment“. Before the adjustment, please check, if the warm water supply is activated and the maximum temperature of the warm water is available at the take off point.

To guarantee the smooth running of the thermostat, it is necessary from time to time to turn the thermostat from total hot to total cold.

Silicone (esente da acido acetico!)

Grazie alla funzione antiscottature Safety la temperatura massima per esempio max. 42 °C desiderata è facilmente regolabile.

#### Taratura

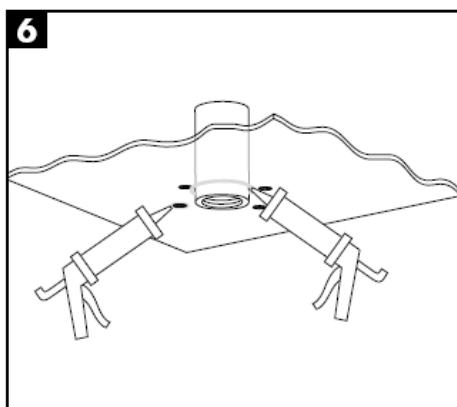

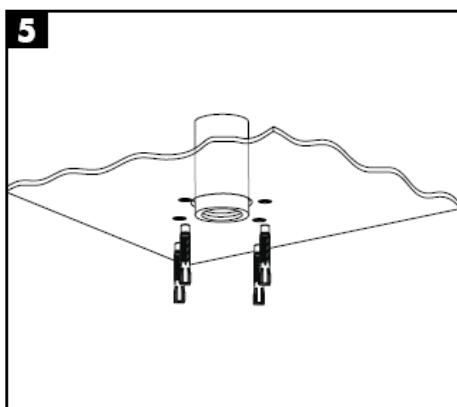

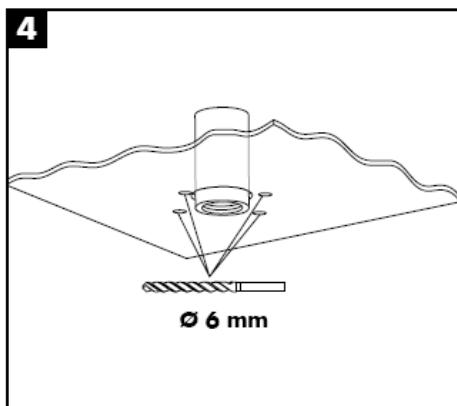

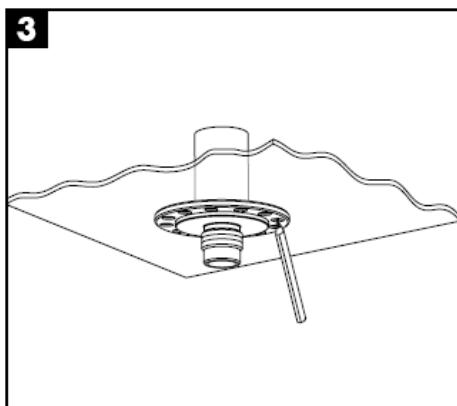

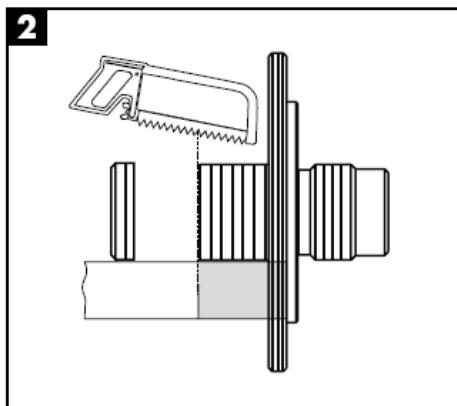

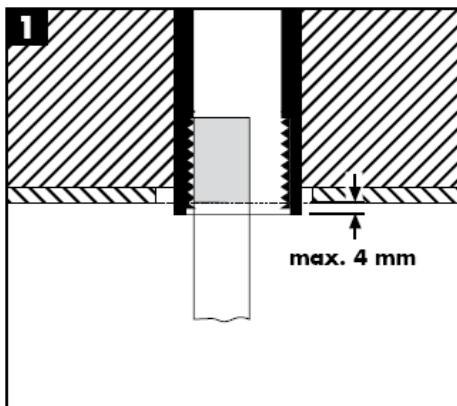

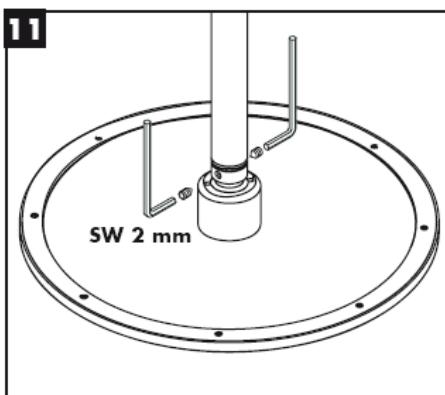

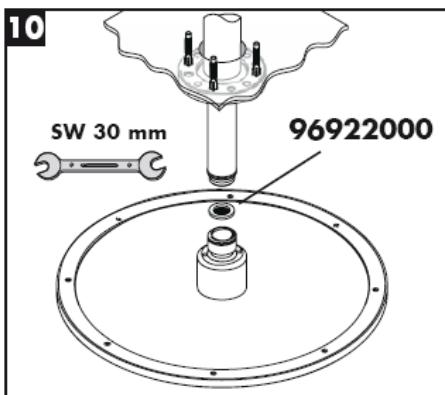

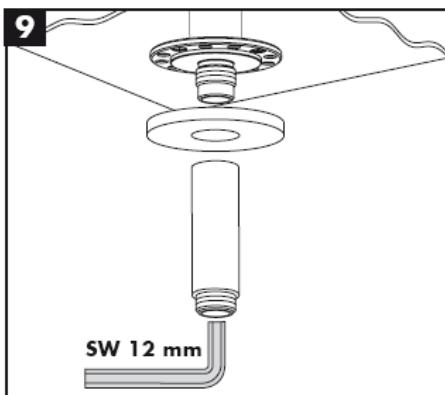

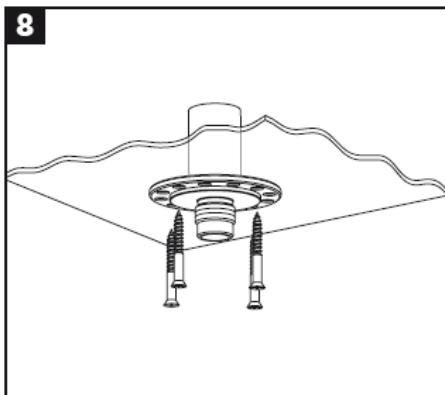

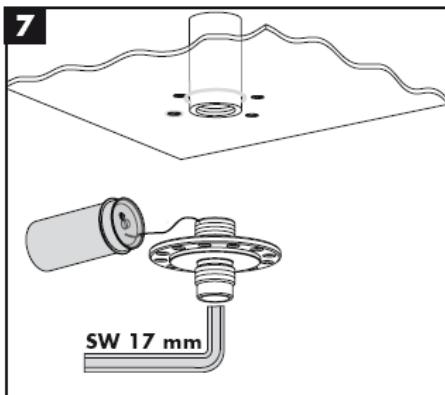

Una volta in funzione il soffione doccia insieme al braccio doccia possono raggiungere un peso di circa 10 kg. Per questo motivo è permesso utilizzare soltanto materiale di fissaggio adatto alla rispettiva muratura! Le viti ed i tasselli allegati sono pre

È permesso utilizzare esclusivamente materiale di fissaggio adatto alla rispettiva muratura! Le viti ed i tasselli allegati sono previsti solo per muratura compatta.

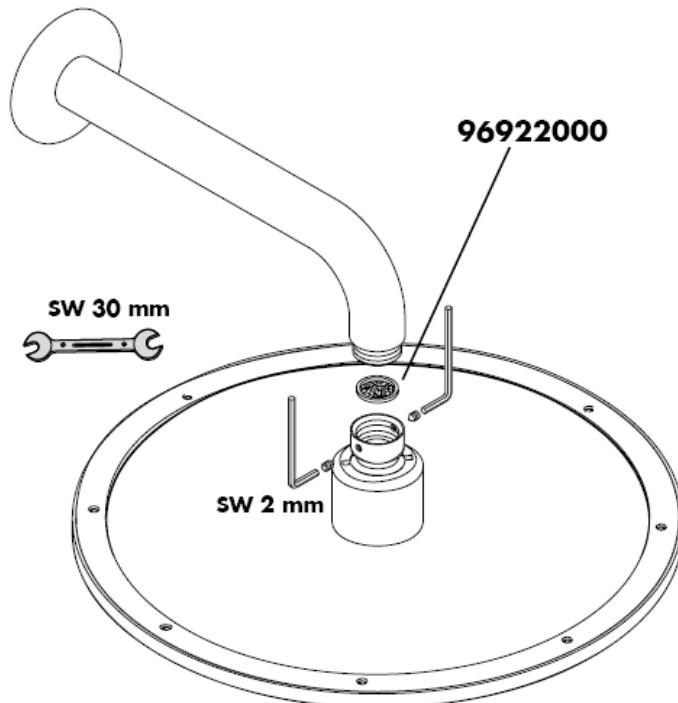

Lo scarico deve essere sufficientemente dimensionato.

Funzionalità ottimale solamente in combinazione con High Flow termostatici Hansgrohe.

Per proteggere la soffione doccia da eventuali impurità provenienti dalle tubazioni dell'acqua, deve essere inserito il filtro nell'impugnatura della doccia stessa. Tali impurità possono infatti causare difetti e/o danneggiare parti della doccia; in questo caso la Hansgrohe non risponde dei danni.

## Montaggio

**Attenzione!** La rubinetteria deve essere installata, pulita e testata secondo le istruzioni riportate!

## Taratura

Una taratura è necessaria quando la temperatura dell'acqua misurata sul punto di prelievo non corrisponde a quella registrata sul termostatico. Operazioni di taratura: Girare la manopola graduata sino al punto di arresto. Uscita d'acqua a 38 °C. Allentare la vite della manopola. Ritrarre la manopola e girarla sino alla posizione 38 °C. Inserire la manopola ed avvitare la vite della manopola (vedere pagina 22).

## Limitazione della temperatura

La gamma di temperatura è limitata a 38 °C con un blocco di sicurezza. Se si desidera una temperatura più alta di 38 °C, il blocco di sicurezza può essere superato premendo sul pulsante.

## Safety Function

Grazie alla funzione antiscottature Safety la temperatura massima per esempio max. 42 °C desiderata è facilmente regolabile. vedi pagg. 21.

## Dati tecnici

Pressione d'uso:	max. 1 MPa
Pressione d'uso consigliata:	0,1 – 0,5 MPa
Pressione di prova:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Temperatura dell'acqua calda:	max. 80 °C
Temp. dell'acqua calda consigliata:	65 °C
Portata di erogazione:	ca. 58 l/min 0,3 MPa

## Manutenzione

I termostatici non necessitano di una particolare manutenzione. La valvola di non ritorno deve essere controllata regolarmente come da DIN EN 1717, secondo le normative nazionali e regionali (almeno una volta all'anno). In tale occasione controllate anche i filtri che si trovano sulla cartuccia termostatica MTC (6.1). Dopo aver montato la cartuccia termostatica MTC (6), è necessario controllare la temperatura di erogazione come descritto nel paragrafo "Taratura". Prima controllate assolutamente se l'alimentazione di acqua calda funziona e che la temperatura massima non superi i valori consigliati.

Per garantire la scorrivolezza dell'elemento di regolazione, di tanto in tanto si dovrebbe regolare il termostatico passando da tutto caldo a tutto freddo.

## Parti di ricambio vedi pagg. 3

Silicona (¡libre de ácido acético!)

Gracias al tope de temperatura se puede graduar la temperatura máxima por ejemplo max. 42 C.

#### Puesta a punto

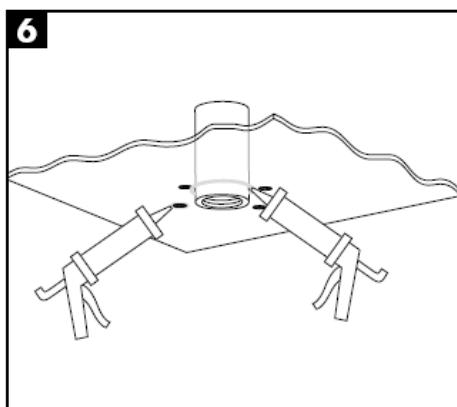

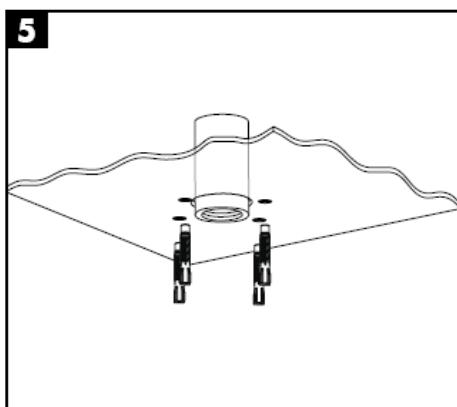

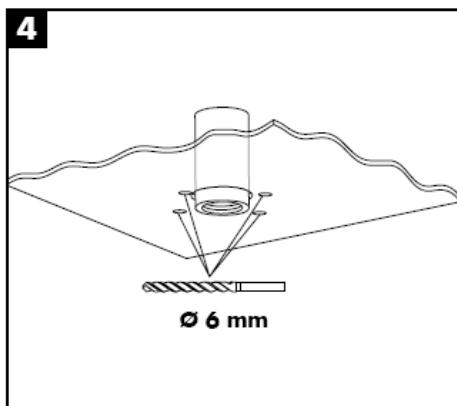

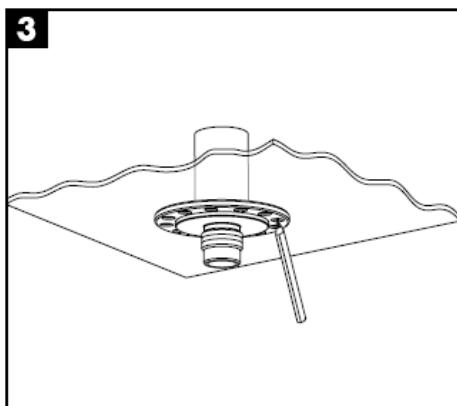

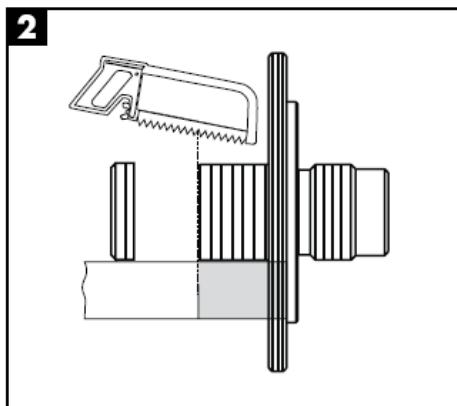

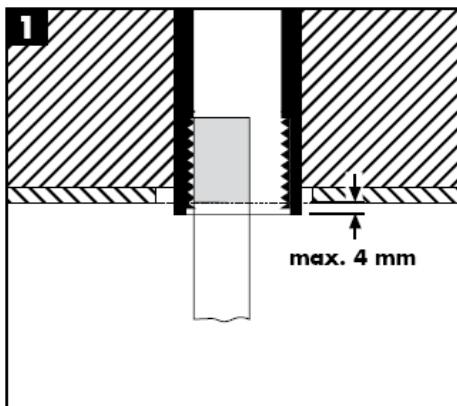

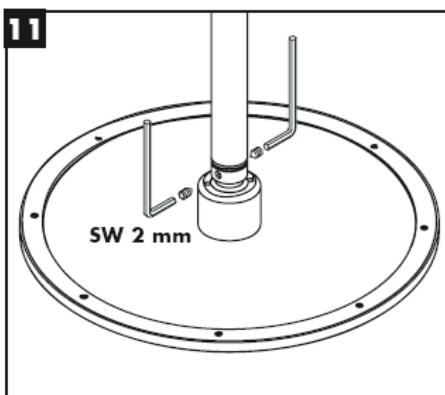

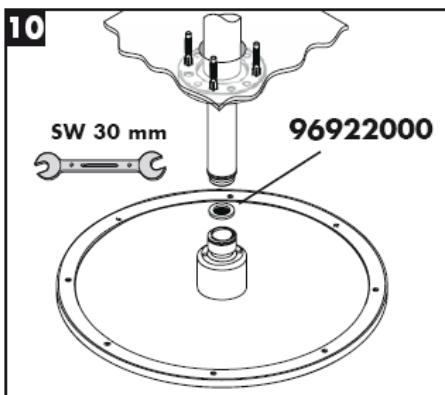

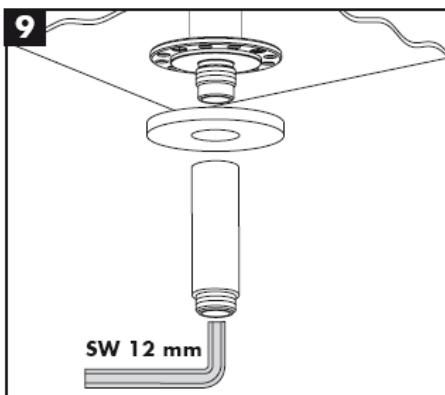

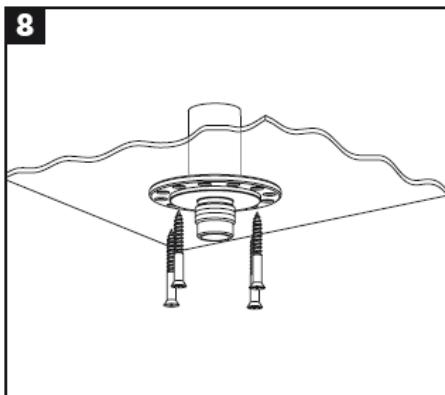

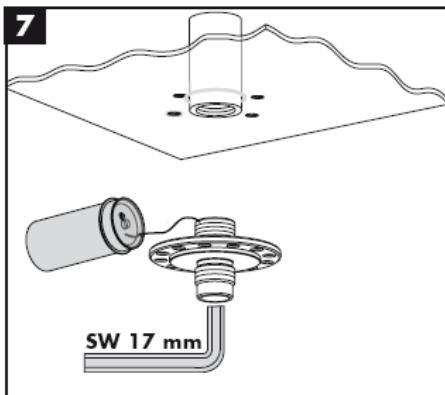

Si la ducha está en funcionamiento, tiene ésta junto con el brazo de la ducha un peso de aprox. 10 kg. Por este motivo, sólo se puede utilizar un material de fijación apropiado para la mampostería! Los tornillos y tacos adjuntos sólo son apropiados para m

¡Sólo se puede utilizar un material de fijación apropiado para la mampostería! Los tornillos y tacos adjuntos sólo son apropiados para mampostería maciza

La tubería de desagüe ha de tener una dimensión suficiente.

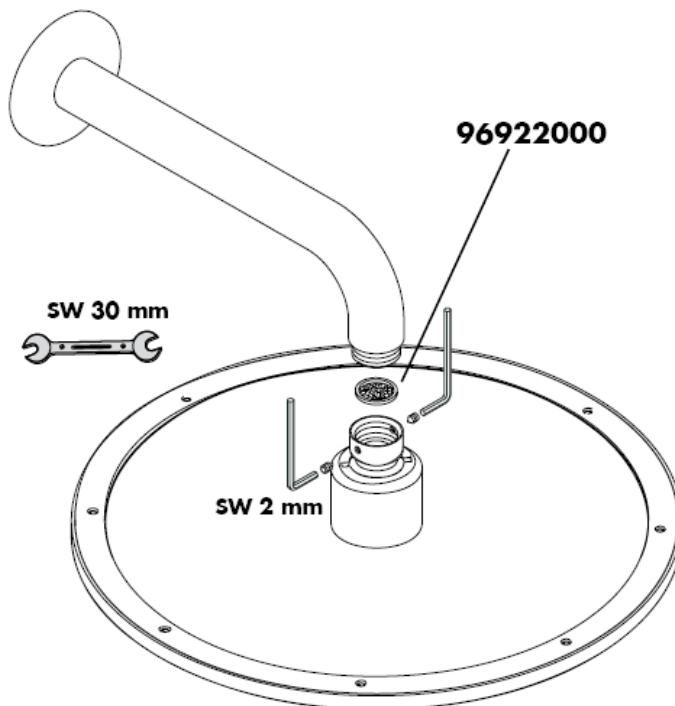

Sólo se garantiza una función óptima en combinación con High Flow termostato Hansgrohe.

---

La junta de filtración que se suministra con la ducha mural evita que las partículas de suciedad procedentes de las tuberías lleguen a la ducha mural. Debe colocarse entre el flexo y la ducha mural. Infiltraciones de suciedad deterioran el funcionamiento de la ducha mural y pueden causar daños en el interior de la misma que no están cubiertos por la garantía de Hansgrohe.

**Montaje**

**¡Atención!** El grifo tiene que ser instalado, probado y testado, según las normas en vigor.

**Puesta a punto**

Un ajuste de temperatura deberá efectuarse siempre y cuando la temperatura del agua tomada en la salida no coincida con la que marque el mando. Al hacerse el ajuste se debe tener en cuenta lo siguiente: girar el mando (con la indicación de los grados) hasta que la temperatura del agua en la salida sea de 38 C. Desenroscar el tornillo que sujet a el mando. Retirar el mando y girar hasta la posición de 38 C. Volver a colocar el mando y atornillarlo (ver pagina 22).

**Limitación de la temperatura**

El radio de giro del volante está bloqueado a los 38 C. Para rebasar esta temperatura basta con oprimir el botón (tope de seguridad).

**Safety Function**

Gracias al tope de temperatura se puede graduar la temperatura máxima por ejemplo max. 42 C. ver página 21.

**Datos técnicos**

Presión en servicio:	max. 1 MPa
Presión recomendada en servicio:	0,1 – 0,5 MPa
Presión de prueba:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Temperatura del agua caliente:	max. 80° C
Temp. recomendada del agua caliente:	65° C
Caudal máximo:	ca. 58 l/min 0,3 MPa

**Mantenimiento**

Los termostatos no precisan ningún tipo de mantenimiento especial. Las válvulas anti-retorno tienen que ser controladas regularmente según la norma DIN EN 1717, en acuerdo con las regulaciones nacionales o regionales (una vez al año, por lo menos). Conviene comprobar al mismo tiempo el filtro del termoelemento (6.1). Después de poner el termoelemento se ha de ajustar el termoelemento a la temperatura (ver "Puesta a punto"). Asegúrese de que el agua caliente esté conectada.

Para garantizar el funcionamiento duradero del termostato, el mando del mismo debería girarse de vez en cuando del extremo frío al extremo caliente.

**Repuestos ver página 3**

Silicone (azijnzuurvrij!)

Dankzij de Safety Function kan de gewenste maximale temperatuur van bijv. max. 42 °C van te voren worden ingesteld.

Correctie

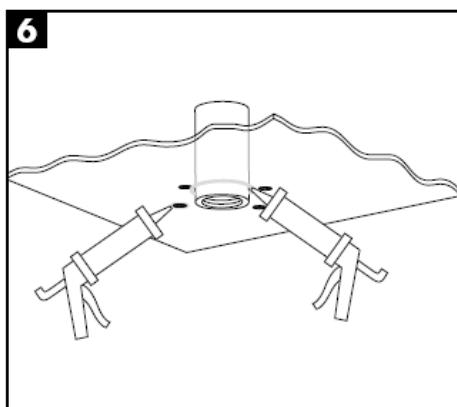

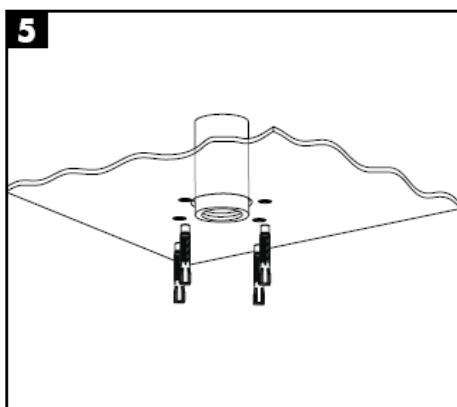

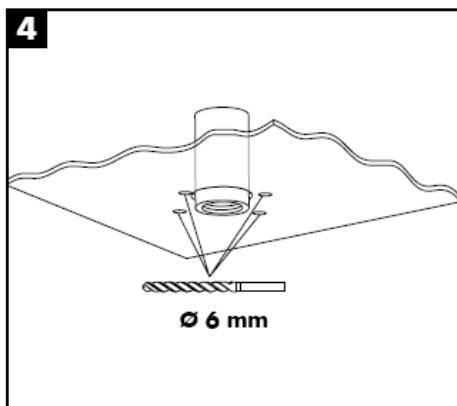

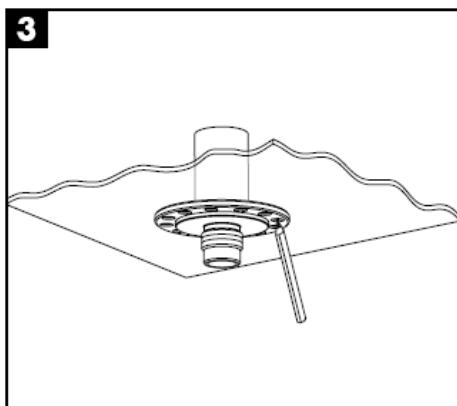

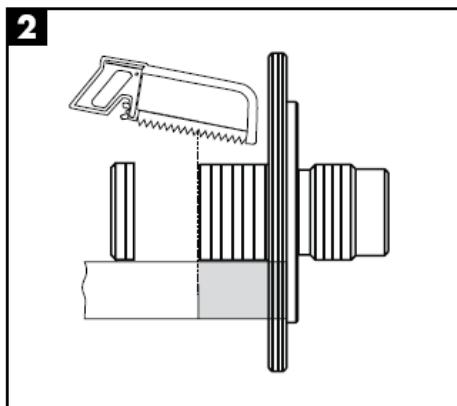

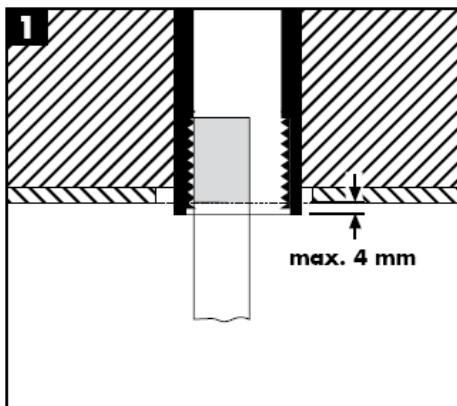

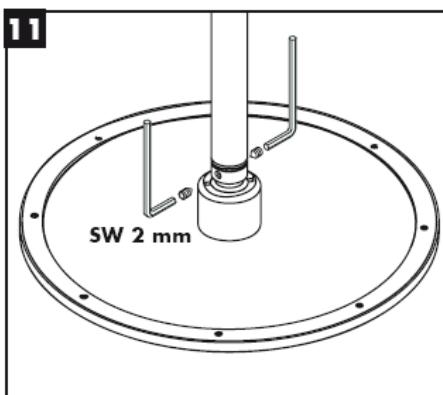

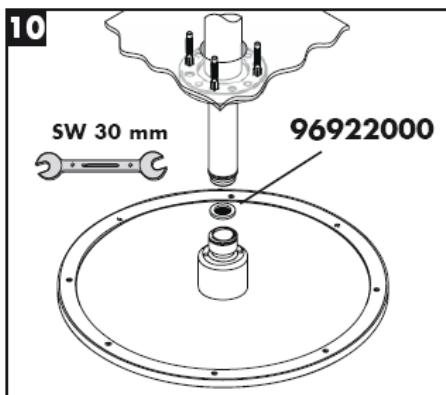

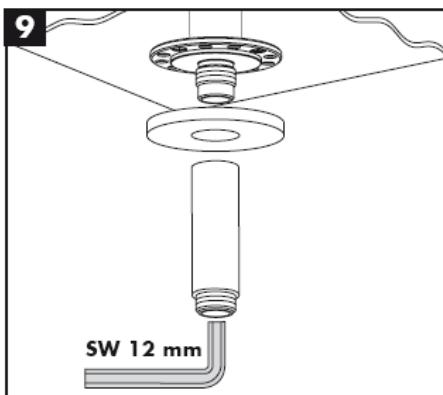

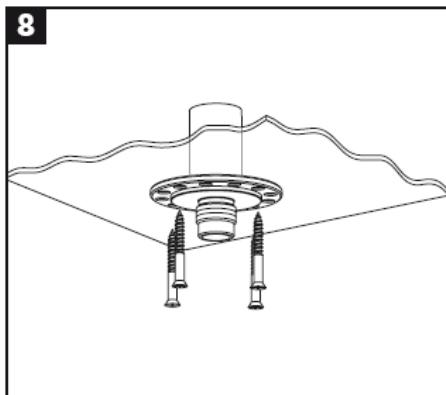

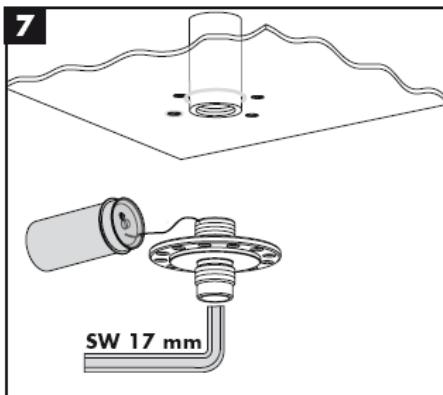

Als de douche in werking is, heeft hij samen met de douchearm een gewicht van ongeveer 10 kg. Daarom mag alleen bevestigingsmateriaal worden gebruikt dat geschikt is voor metselwerk! De bijgeleverde schroeven en pluggen zijn alleen geschikt voor massief m

Er mag alleen bij het wandmateriaal passend bevestigingsmateriaal gebruikt worden! De bijgeleverde schroeven en pluggen zijn alleen bestemd voor massief wandmateriaal.

De afvoercapaciteit moet voldoende gedimensioneerd worden.

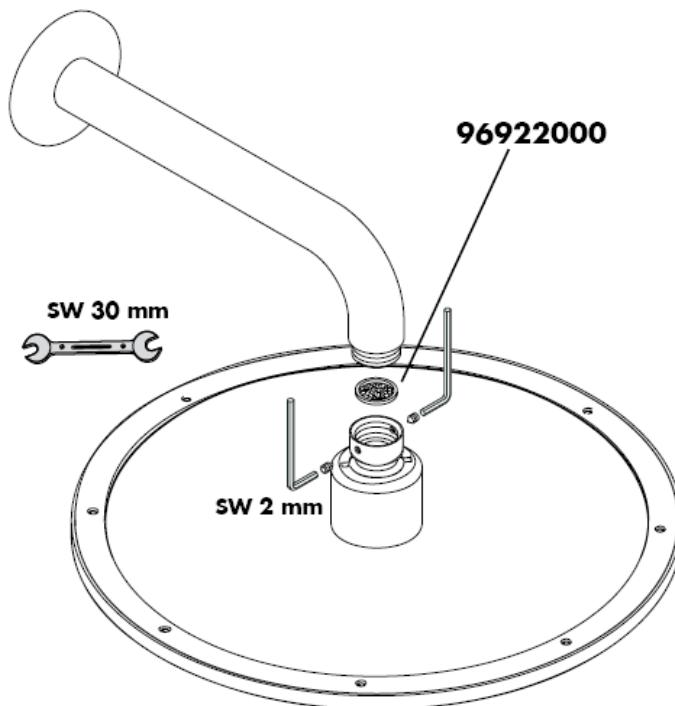

Optimal funktionieren gegarantiert bei Kombination mit Hansgrohe High Flow Thermostaten.

---

Het bij de hoofddouche verpakte zeefje moet worden ingebouwd om vuil uit de waterleiding te weren. Vuil uit de leidingen kan de werking van de hoofddouche negatief beïnvloeden en/of de hoofddouche beschadigen. Voor deze schade is Hansgrohe niet verantwoordelijk.

**Montage**

**Attentie!** Leidingen doorspoelen volgens Norm. De mengkraan vervolgens monteren en controleren!

**Correctie**

Een korrektie is noodzakelijk als de temperatuur aan het aftappunt afwijkt van de ingestelde temperatuur. Daarbij dient het volgende in acht genomen te worden:  
Greep draaien tot het water bij het aftappunt een temperatuur heeft van 38 °C. Greepschroef losdraaien, greep terugtrekken en tot stand 38 °C draaien. Greep terug plaatsen en greepschroef vastdraaien (zie blz 22).

**Temperatuurbegrenzing**

Het temperatuurgebied wordt door de veiligheidsblokkering tot 38 °C begrensd. Als er een hogere temperatuur gewenst wordt, kan de blokkering van 38 °C door het indrukken van de veiligheidsknop overschreden worden.

**Safety Function**

Dankzij de Safety Function kan de gewenste maximale temperatuur van b.v. max. 42 °C van te voren worden ingesteld. zie blz. 21.

**Technische gegevens**

Werkdruk: max.	max. 1 MPa
Aanbevolen werkdruk:	0,1 – 0,5 MPa
Getest bij:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Temperatuur warm water:	max. 80 °C
Aanbevolen warm water temp.:	65 °C
Doorstroomcapaciteit:	ca. 58 l/min 0,3 MPa

**Onderhoud**

Thermostaten behoeven geen speciaal onderhoud. Keerkleppen moeten volgens DIN EN 1717 regelmatig en volgens plaatself geldende eisen op het functioneren gecontroleerd worden. (Tenminste een keer per jaar). Tevens moeten de zeefjes op het thermoelement worden gecontroleerd (6.1). Na montage van het MTC thermo-element moet de uitstroomtemperatuur gecontroleerd worden. Zie hiervoor 'correctie'. Controleer vooraf of de warmwater voorziening functioneert en wat de maximale watertemperatuur bij het tappunt is.

Om het soepel lopen van de regeleenheid te garanderen moet de thermostaat van tijd tot tijd op heel koud en heel warm worden ingesteld.

Silikone (eddikesyre-fri)

Takket være Safety varmtvands-begrænsningen kan maksimaltemperaturen forudindstilles eksempel max. 42 C.

#### Justering

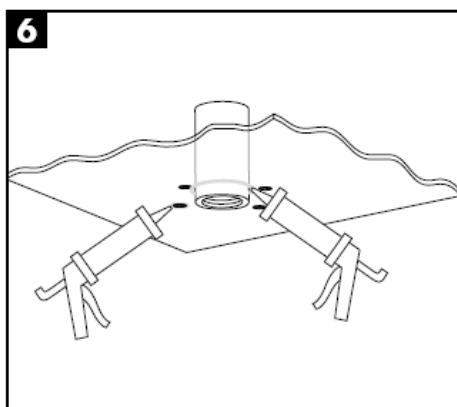

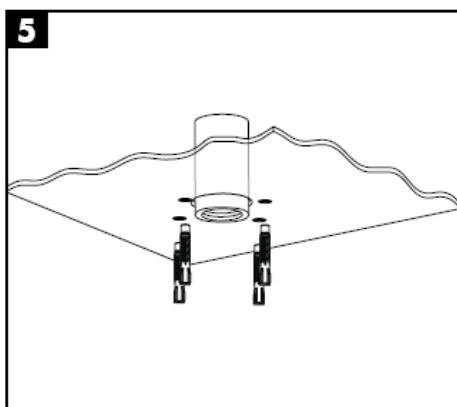

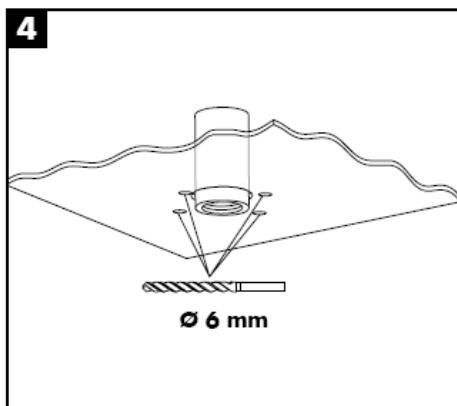

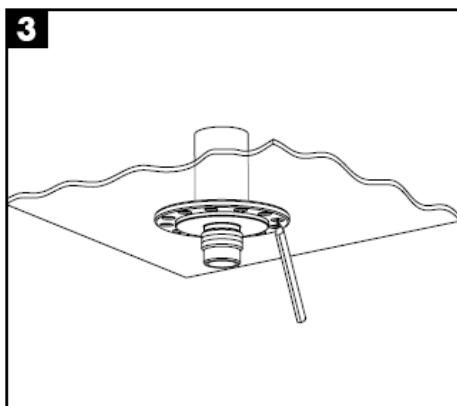

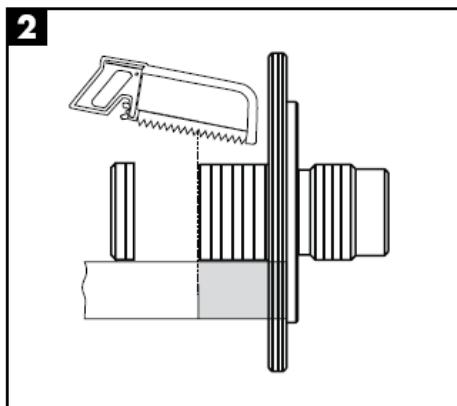

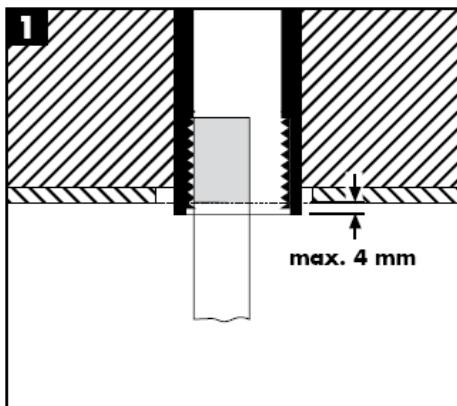

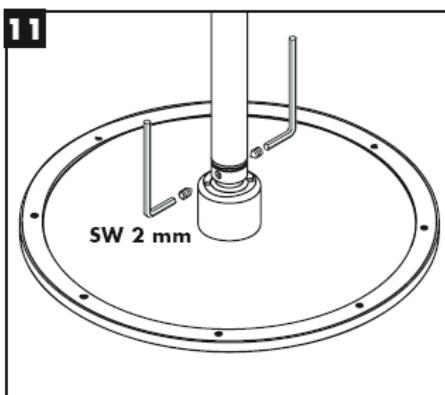

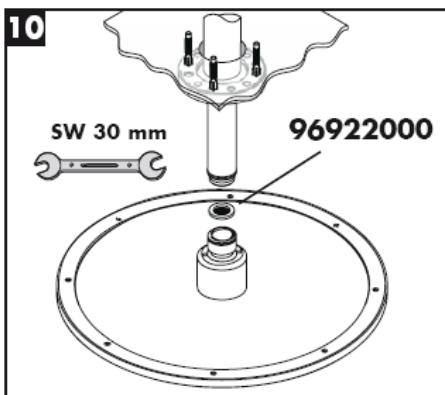

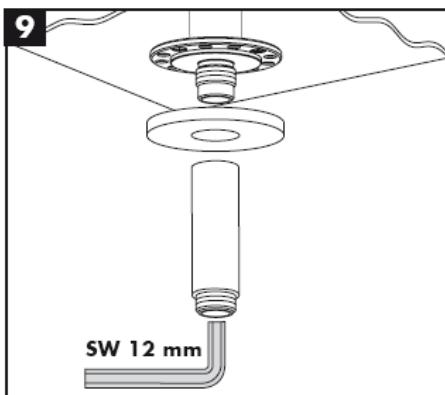

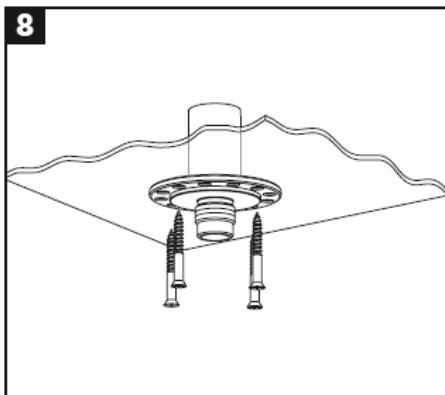

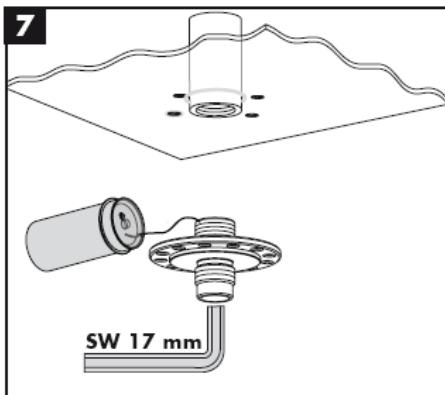

Hvis bruseren er i brug er vægten sammen med bruserarmen ca. 10 kg. Derfor må der kun anvendes befæstelsesmateriale som er velegnet til murværket! De vedlagte bolte og dyvler er kun beregnet til massivt murværk.

Benyt kun fastgørelsesmateriale, der er egnet til murværk! De vedlagte skruer og dyvler er kun beregnet til massivt murværk.

Afløbet skal være i en tilstrækkelig størrelse.

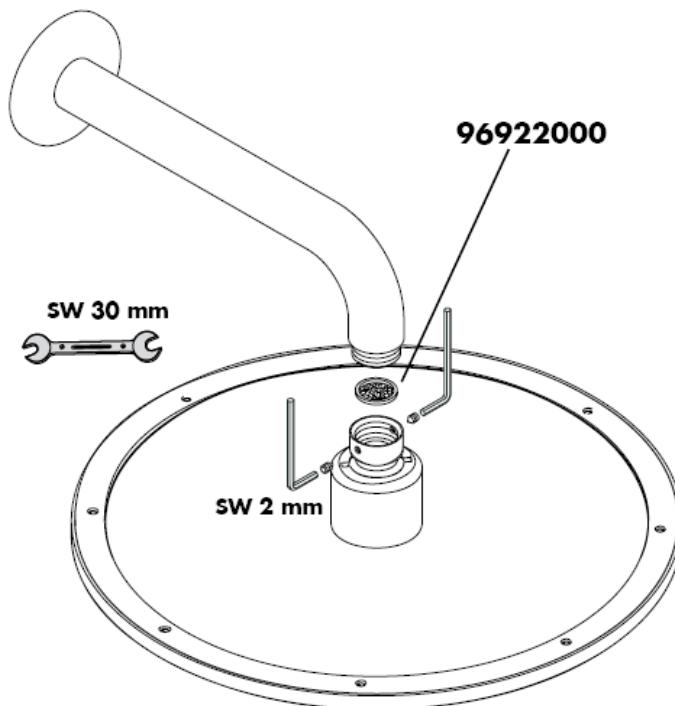

Optimal funktion garanteres for anvendelse i forbindelse med Hansgrohe High Flow Termostaten.

---

Den vedlagte smudsfangssi skal indsættes i bruseren for at undgå snavs fra rørsystemet. Indskyldet snavs kan have indflydelse på bruserens funktion og/eller føre til beskadigelser på håndbruserens funktionsdele.

## Montering

**Advarsel!** Leidingen doorspoelen volgens Norm. De mengkraan vervolgens monteren en kontrolleren!

## Justering

En justering er nødvendig, hvis udløbstemperaturen og den angivne temperatur ikke stemmer overens. Justering sker på følgende måde: Skalagrebnet drejes så vandet er 38 °C. Skruen i grebnet løsnes, grebnet trækkes tilbage og drejes til stilling 38 °C. Grebnet sættes på og skrues fast (se side 22).

## Temperaturlimitation

Temperaturområdet er begrænset opad til 38 °C ved hjælp af sikkerhedsspærren. Ønskes en højere temperatur, kan denne spærre overskrides ved at trykke den sikkerhedsknap ind.

## Safety Function

Takket være Safety varmtvands-begrænsningen kan maksimaltemperaturen forudindstilles eksempel max. 42 °C. se s. 21.

## Tekniske data

Driftstryk:	max. 1 MPa
Anbefalet driftstryk:	0,1 – 0,5 MPa
Prøvetryk:	1,6 MPa (1 MPa = 10 bar = 147 PSI)

Varmtvandstemperatur:	max. 80 °C
Anbefalet varmtvandstemperatur:	65 °C
Gennemstrømningsskapacitet:	ca. 58 l/min 0,3 MPa

## Service

Termostaten behøver ikke nogen speciel service. Ifølge DIN EN 1717 skal gennemstrømningsbegrensere i overenstemmelse med nationale regler afprøves regelmæssigt (mindst en gang om året). lejlighed bør smudsfangsien efterses – den befinner sig på termostatelementet (6.1). Efter montering af termostatelementet (6) er det vigtigt, at udløbstemperaturen kontrolleres (se under punktet "Justering"). Kontrolér at varmtvandsforsyningen er tilsluttet, og at temperaturen ikke overstiger max. temperatur. OBS! Det er vigtig at motionere termostaten jævnligt ved at dreje termostatgrebet skiftevis på kold og varm.

For at sikre optimal funktion af termostaten, bør termostaten fra tid til anden motioneres (stilles skiftevis helt varm og helt kold).

Silicone (sem ácido acético)

Graças à função de segurança pode-se regular a temperatura máxima por exemplo max. 42°C.

#### Afinação

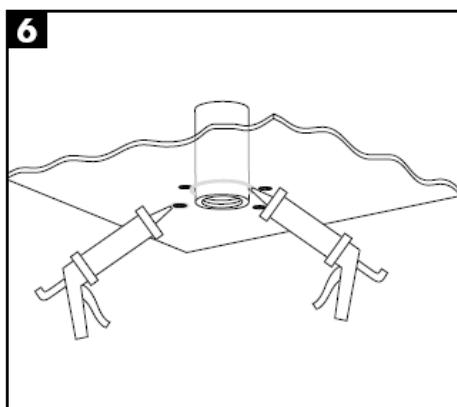

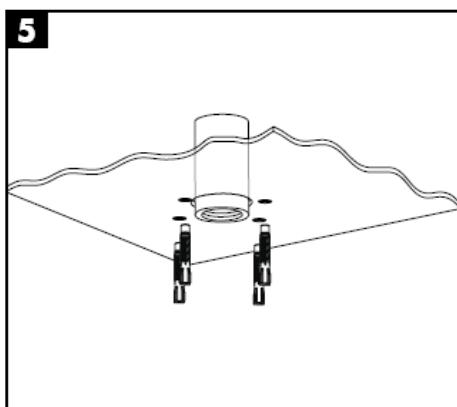

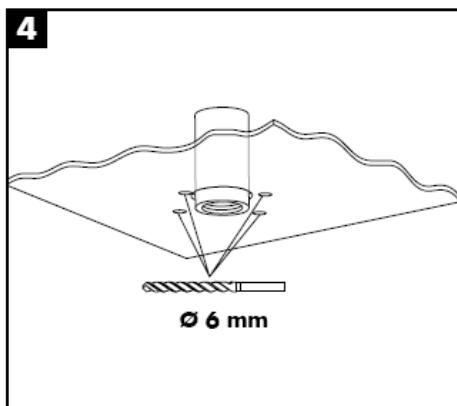

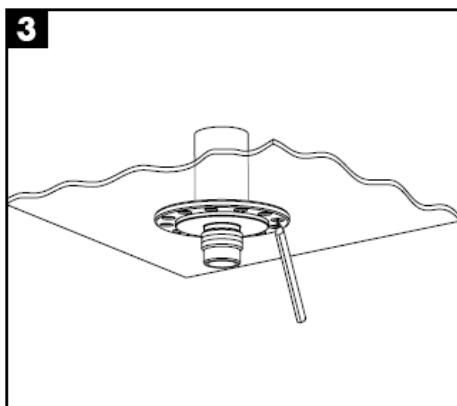

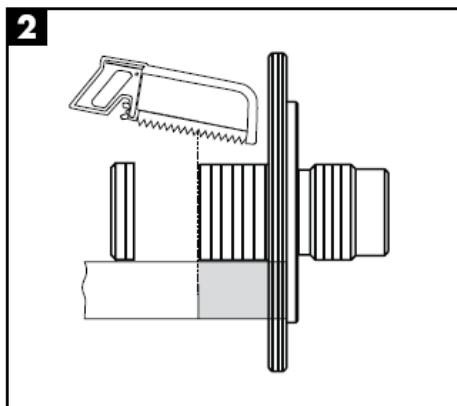

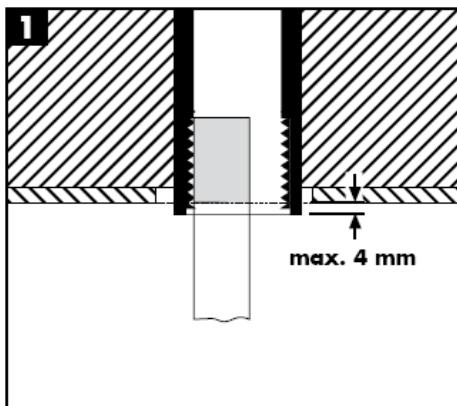

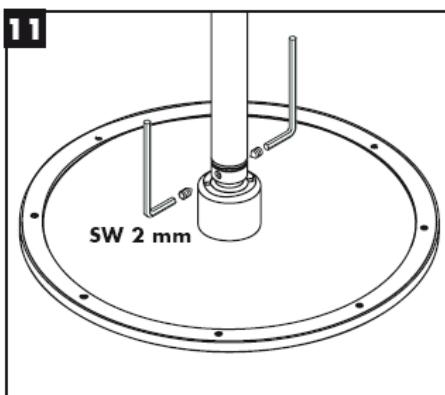

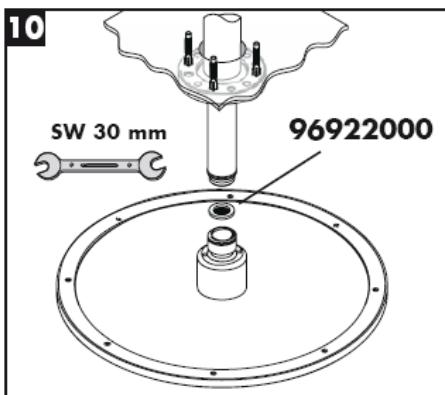

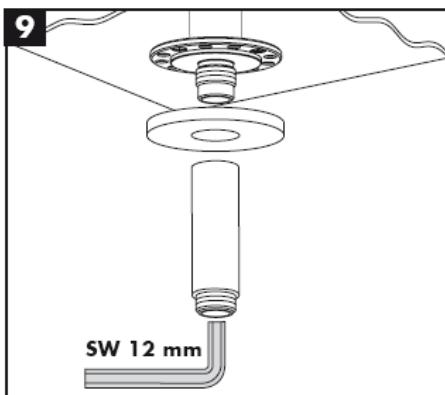

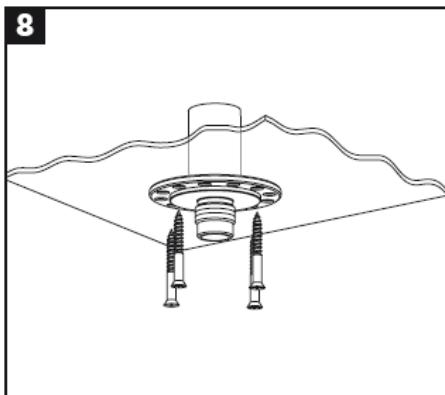

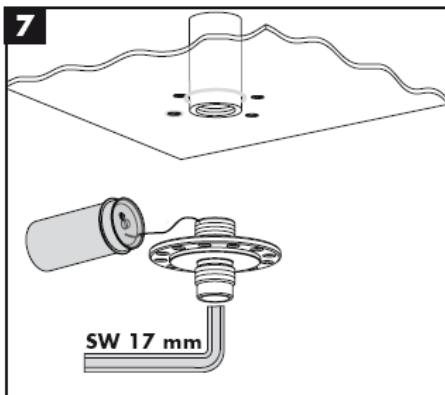

Assim que o chuveiro estiver em funcionamento este tem, juntamente com o braço do chuveiro, um peso de aprox. 10 kg. Por esse motivo, só pode ser utilizado material de fixação adequado para o respectivo tipo de parede! Os parafusos e buchas incluídos no v

Use apenas material de fixação adequado para alvenaria! Os parafusos e buchas incluídos são apenas para alvenaria macia.

A capacidade de escoamento deve ser devidamente dimensionada.

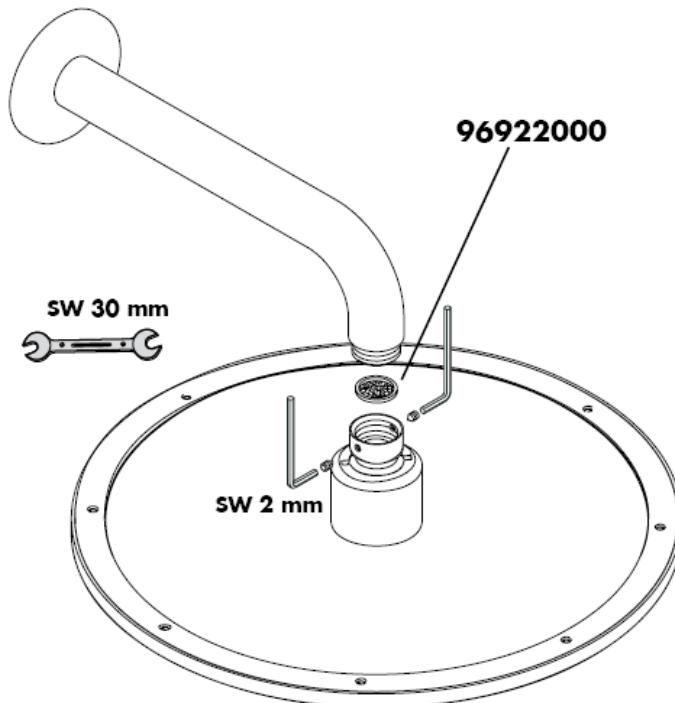

O bom funcionamento é apenas garantido em combinação com a termostática High Flow da Hansgrohe.

---

O filtro de rede deve ser colocado para proteger o chuveiro de areias e resíduos provenientes da tubagem. Resíduos e areias podem danificar componentes, ou provocar mau funcionamento do chuveiro; as avarias assim provocadas anulam a nossa responsabilidade e anulam a nossa garantia.

## Montagem

**Atenção!** A misturadora deve ser instalada, purgada e testada de acordo com as normas em vigor!

## Afinação

Torna-se necessário afinar a misturadora se a temperatura da água não condiz com a indicada na escala graduada. Para afinar a temperatura proceder assim:

Rode o manípulo até a água sair à temperatura de 38 °C. Desaperte o parafuso do manípulo graduado e rodeo até a posição de 38 °C.

Encaixe de novo o manípulo e aperte o parafuso (ver página 22).

## Límite de temperatura

A temperatura é regulável até 38 °C, altura em que intervém o ressalto de segurança. Quando se desejar uma temperatura superior, pode fazê-lo, premindo o botão vermelho de segurança e rodando o manípulo.

## Safety Function

Graças à função de segurança pode-se regular a temperatura máxima por exemplo max. 42°C. ver página 21.

## Dados Técnicos

Pressão de funcionamento:	max. 1 MPa
Pressão de func. recomendada:	0,1 – 0,5 MPa
Pressão testada:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Temperatura da água quente:	max. 80 °C
Temp. água quente recomendada:	65 °C
Caudal:	ca. 58 l/min 0,3 MPa

## Manutenção

A misturadora termostática não necessita de manutenção em especial. As válvulas anti-retorno devem ser verificadas regularmente de acordo com a DIN EN 1717 segundo os regulamentos nacionais ou regionais (pelo menos uma vez por ano). Verifique nesta ocasião também a sujidade e o estado do cartucho (6.1). Depois da montagem do cartucho (6) testar a temperatura da água, como descrito no ponto "Afinação". Verifique previamente se o abastecimento de água quente está ligado e se está no máximo da temperatura.

Para garantir um funcionamento suave do elemento termostático é necessário de vez em quando rodar totalmente o manípulo da termostática da posição quente para a fria.

## Peças de substituição ver página 3

Dzięki funkcji zabezpieczającej można przestawić żądaną maksymalną temperaturę np. na maks. 42 C.

#### Regulacja

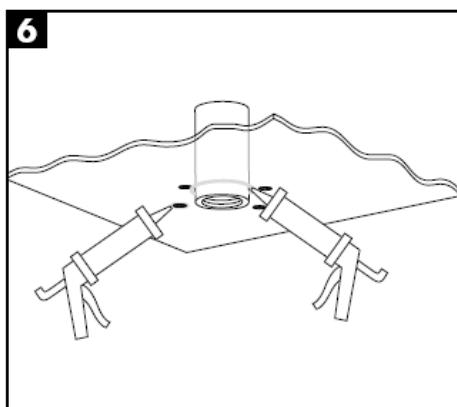

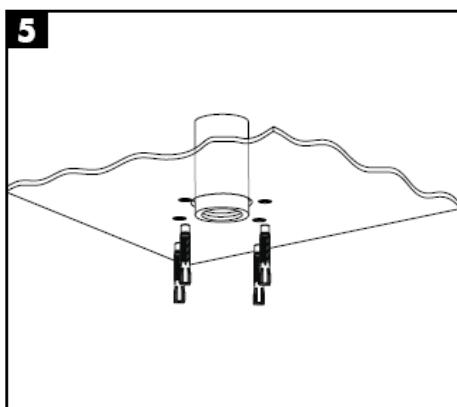

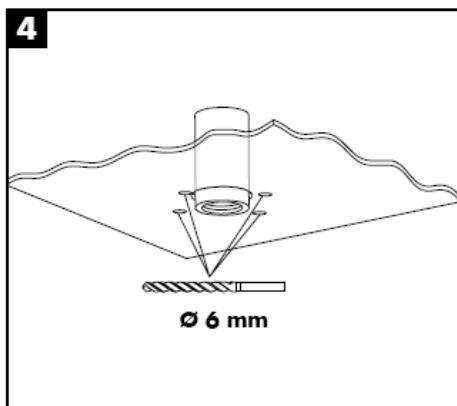

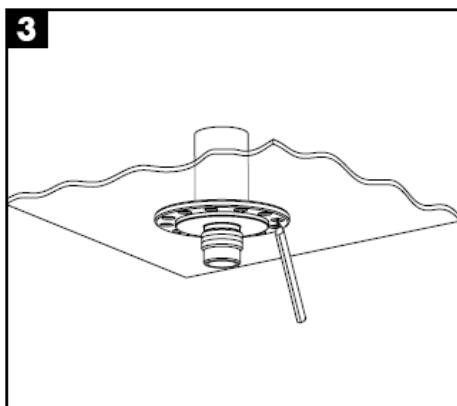

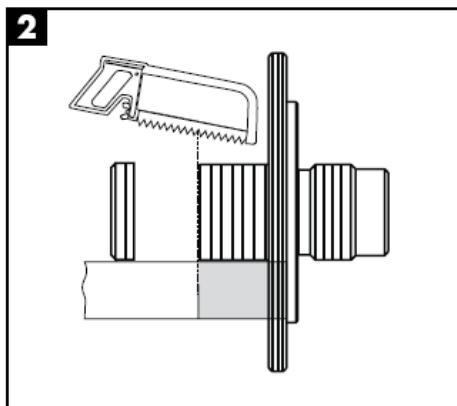

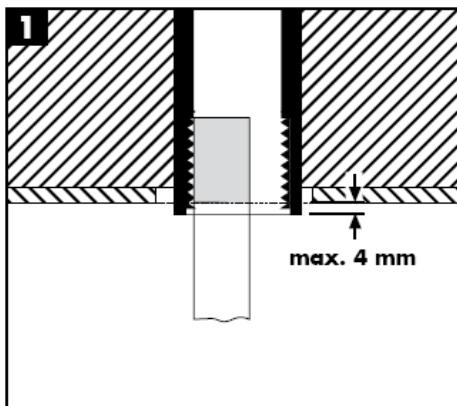

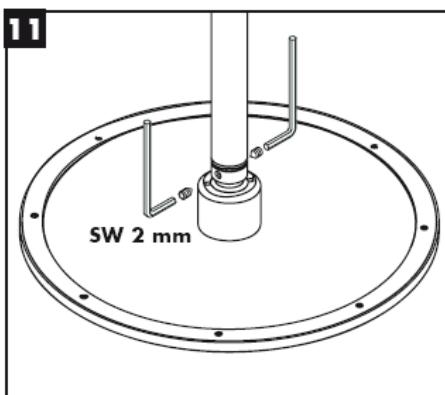

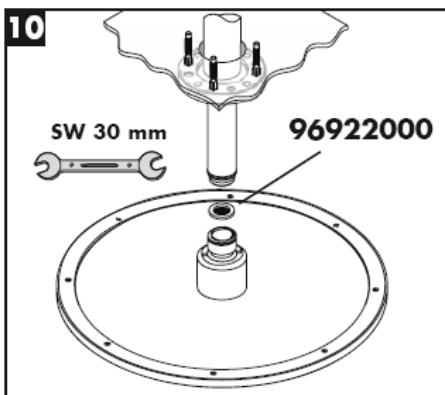

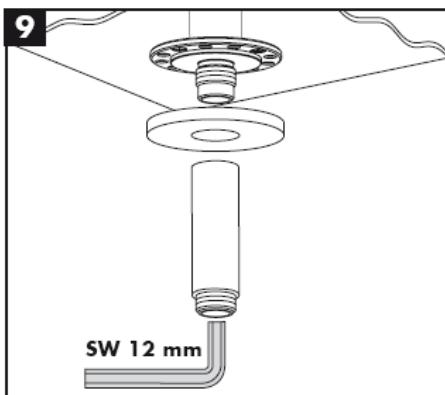

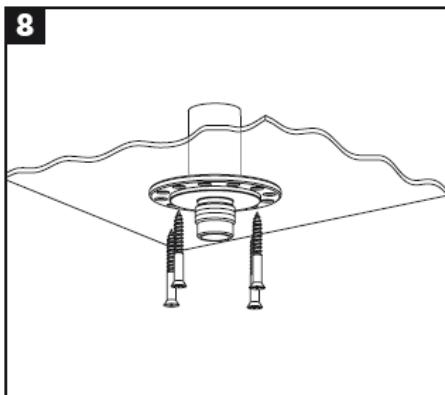

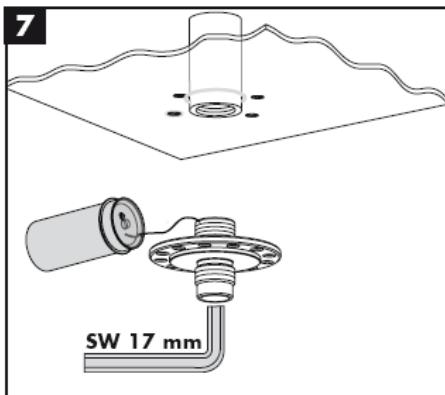

W czasie działania prysznica, waży on wraz z ramieniem prysznica ok. 10 kg. Z tego względu, w murze można użyć tylko odpowiedniego materiału mocującego! Umieszczone w dostawie śruby i kołki rozporowe są przeznaczone tylko do muru masywnego.

Należy stosować tylko elementy mocujące odpowiednie do muru! Dołączone śruby i kołki nadają się tylko do masywnego muru.

Odpływ musi mieć wystarczające wymiary.

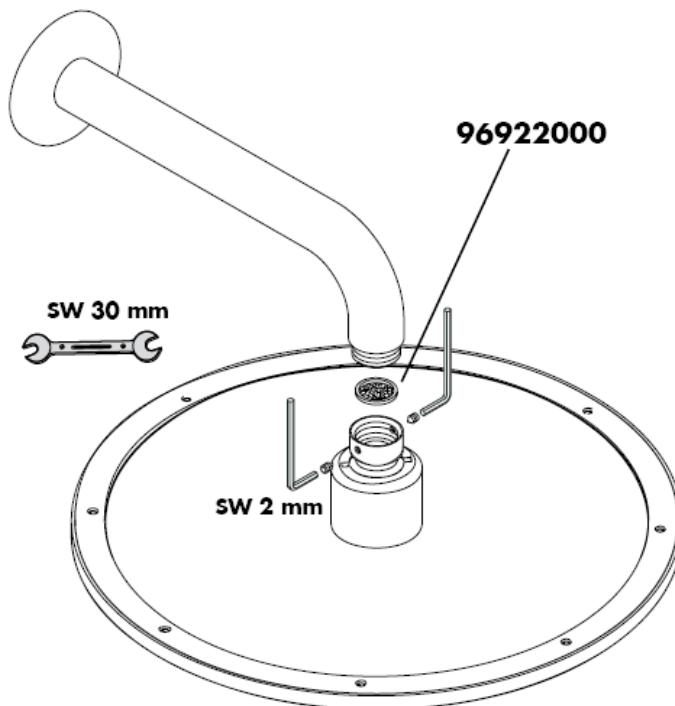

Poprawność funkcjonowania gwarantowana tylko przy użyciu termostatów High Flow firmy Hansgrohe.

---

Znajdujące się przy prysznicu sitko musi zostać zainstalowane, aby zatrzymać zanieczyszczenia z instalacji. Przedostojące się zanieczyszczenia mogą mieć ujemny wpływ na działanie i/lub prowadzić do usterek w działaniu elementów prysznicu. Za powstałe z tego tytułu szkody firma Hansgrohe nie ponosi odpowiedzialności.

**Montaż**

**Uwaga!** Armatura musi być zamontowana, przepłukana i wypróbowana według obowiązujących norm!

**Regulacja**

Jeżeli po ustawieniu termostatu, temperatura na wylocie jest inna niż ustawiona, to wymagana jest korekta. Należy przy tym zwrócić uwagę na następujące kwestie:

Przekręcić pokrętło z podziałką, aż na wylocie pojawi się woda o temperaturze 38 C.

Poluzować śrubę rączki, następnie śrubę tę ponownie dokręcić aż do pozycji 38 C. Naloży rączkę i dokręcić śrubę rączki (patrz str. 22).

**Ogranicznik temperatury**

Zakres temperatury ogranicza się za pomocą blokady zabezpieczającej do 38 C (ochrona przed poparzeniem).

Jeżeli pożądana jest wyższa temperatura, wówczas można przekroczyć blokadę 38 C przez naciśnięcie przycisku zabezpieczającego.

**Safety Function**

Dzięki funkcji zabezpieczającej można przestawić żądaną maksymalną temperaturę np. na maks. 42 C. patrz strona 21.

**Dane techniczne**

Ciśnienie robocze: max. 1 MPa

Zalecane ciśnienie robocze: 0,1 – 0,5 MPa

Ciśnienie próbne: 1,6 MPa

(1 MPa = 10 bary = 147 PSI)

Temperatura wody gorącej: max. 80° C

Zalecana temperatura wody gorącej: 65° C

Wydajność przepływu: ca.58 l/min 0,3 MPa

**Konserwacja**

Termostaty nie wymagają szczególnej konserwacji. Działanie zabezpieczeń przed przepływem zwrotnym, zgodnie z normą DIN EN 1717 i miejscowymi przepisami, musi być kontrolowane (DIN 1988, raz w roku). Przy okazji należy także sprawdzić łapacze zanieczyszczeń, które znajdują się na termostacie MTC (6.1) Po montażu termostatu MTC (6) należy koniecznie sprawdzić temperaturę wypływającą wody w sposób opisany w punkcie "Regulacja".

Przedtem należy koniecznie sprawdzić czy włączone jest zasilanie ciepłej wody i czy w miejscu poboru jest maks. temperatura ciepłej wody.

Aby zachować łatwość obsługi termostatu, od czasu do czasu należy go przekręcić na całkiem zimną i na całkiem ciepłą wodę.

Silikon (bez kyseliny octové!)

Díky Safety Function je možné předem nastavit nejvyšší požadovanou teplotu, např. max. 42 C.

#### Nastavení

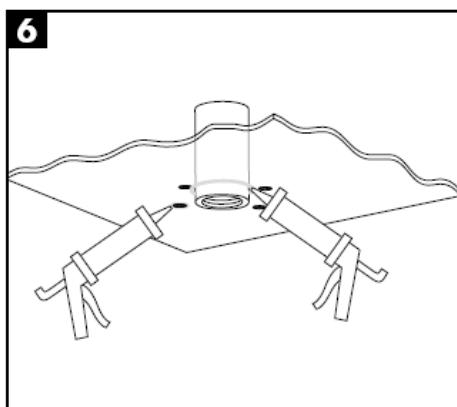

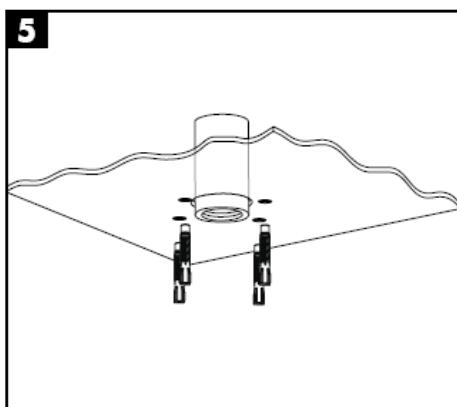

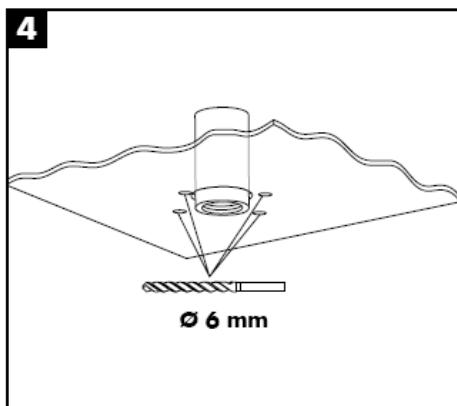

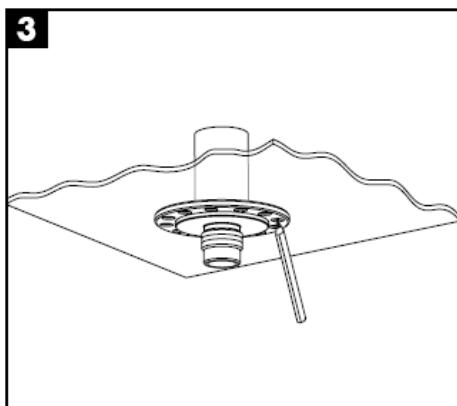

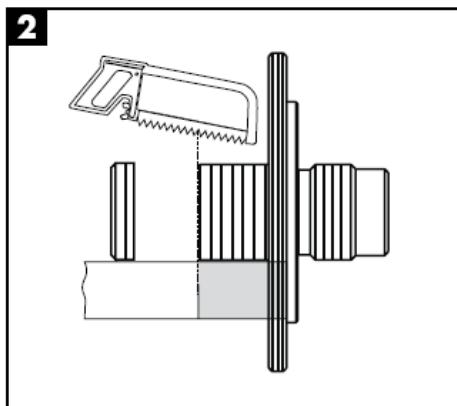

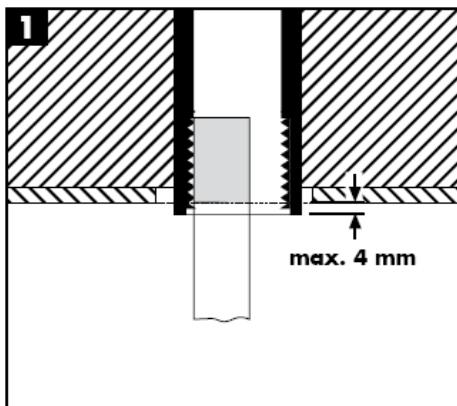

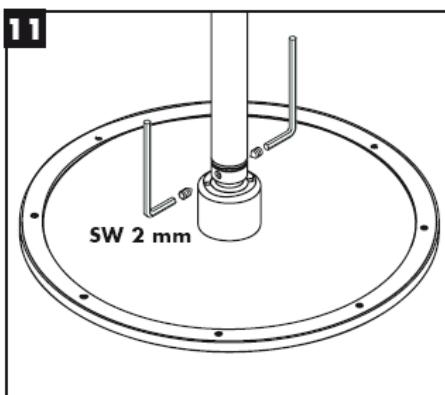

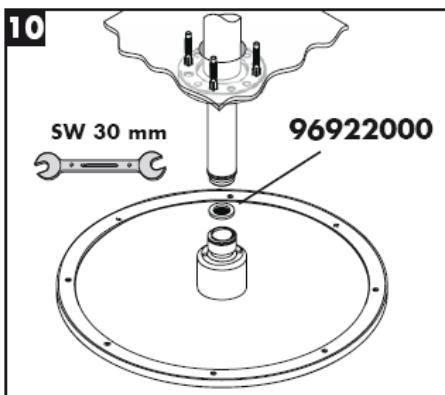

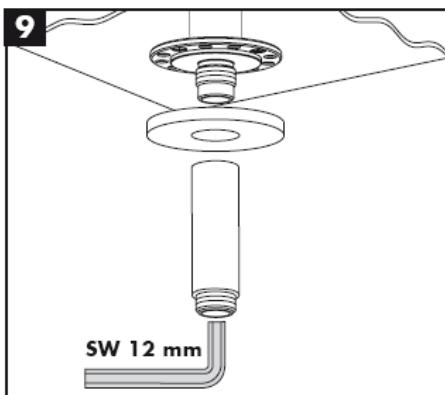

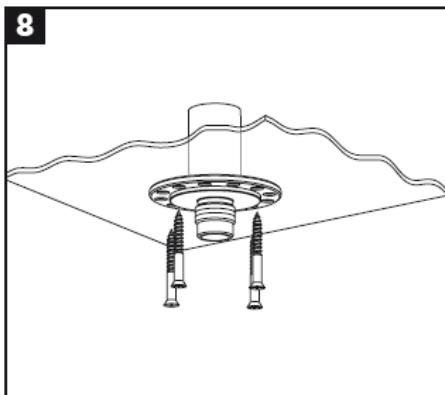

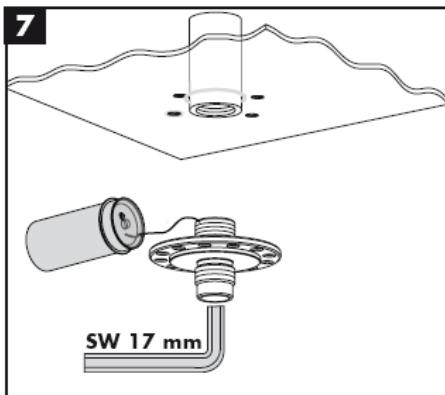

Jestliže je sprcha ve funkčním stavu, má spolu s ramenem sprchy hmotnost cca 10 kg. Proto smí být používán upevňovací materiál vhodný pouze pro zdivo! Přiložené šrouby a hmoždinky jsou určeny pouze pro masivní zdivo.

Smí se použít pouze takový upevňovací materiál, který je pro zdivo vhodný! Přiložené vruty a hmoždinky jsou určeny pouze pro plné zdivo.

Propustnost odpadu musí být dostatečně dimenzována.

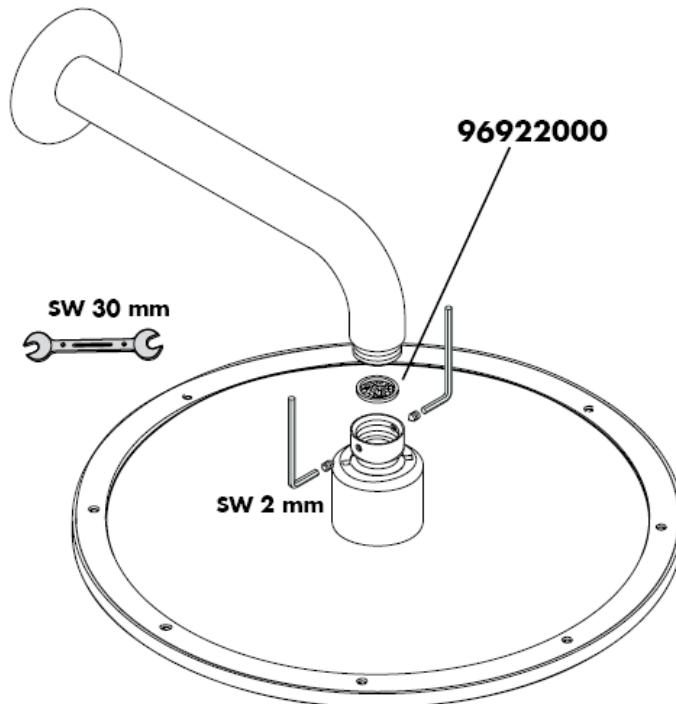

Optimální funkce je zaručena pouze s High Flow termostaty Hansgrohe.

---

Do přívodu musí být zabudováno se sprchou dodávané sítko, aby zachycovalo nečistoty vyplavené z vodovodní sítě. Vyplavené nečistoty mohou ovlivnit funkci sprchy a nebo mohou vést i k jejímu poškození. Na takto vzniké škody se nevztahuje záruka firmy Hansgrohe.

## **Montáž**

**Pozor!** Armatura se musí montovat, proplachovat a testovat podle platných norem!

## **Nastavení**

Jestliže se v místě odběru liší změřená teplota od teploty nastavené na termostatu, je třeba provést korekci.

Postupuje se takto: Otáčejte rukojetí se stupnicí, až má voda v místě odběru 38 °C. Uvolněte šroub rukojeti, rukojet stáhněte a natočte ji do polohy pro 38 °C. Rukojet nasuňte zpět a utáhněte šroub rukojeti (viz strana 22).

## **Omezení teploty**

Rozsah teplot je bezpečnostní pojistkou omezen na 38 °C (ochrana proti opaření). Pokud se požaduje vyšší teplota, je možné překonat pojistku 38 °C stisknutím bezpečnostního tlačítka.

## **Safety Function**

Díky Safety Function je možné předem nastavit nejvyšší požadovanou teplotu, např. max. 42 °C. viz strana 21.

## **Technické údaje**

Provozní tlak:	max. 1 MPa
Doporučený provozní tlak:	0,1 – 0,5 MPa
Zkušební tlak:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Teplota horké vody:	max. 80 °C
Doporučená teplota horké vody:	65 °C
Průtok:	ca. 58 l/min 0,3 MPa

## **Údržba**

Termostaty nevyžadují žádnou zvláštní údržbu. U zpětných ventilů se musí podle DIN EN 1717 v souladu s národními nebo regionálními předpisy testovat jejich funkčnost (alespoň jednou ročně). Zkontrolujte při této příležitosti také lapače nečistot, které se nacházejí na MTC regulační jednotce (6.1). Po montáži MTC regulační jednotky (6) zkontrolujte bezpodmínečně teplotu na výtoku, jak je popsáno v bodu „Nastavení“. Předtím rozhodně zkontrolujte, jestli je zapnuto zásobování teplou vodou a jestli je v místě odběru voda s maximální teplotou k dispozici.

Aby byl zajištěn lehký chod regulační jednotky, měl by se termostat čas od času nastavovat na úplně horkou a úplně studenou vodu.

Silikon (bez kyseliny octovej!)

Vďaka Safety Function je možné vopred nastaviť najvyššiu požadovanú teplotu, napr. max. 42 C.

#### Nastavenie

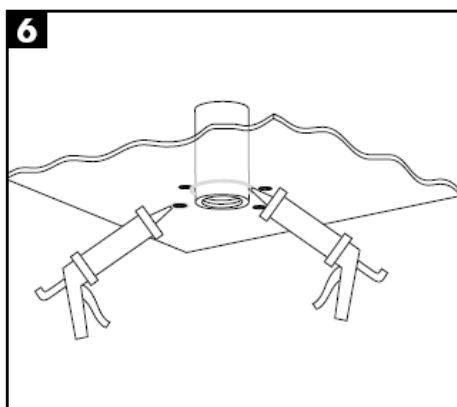

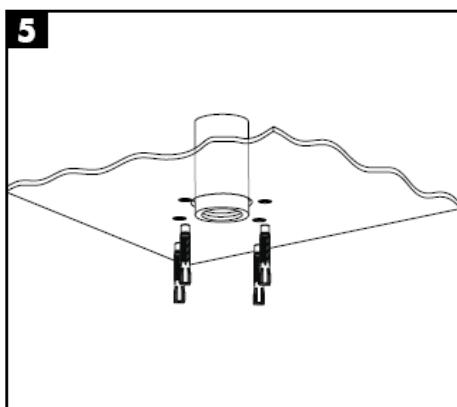

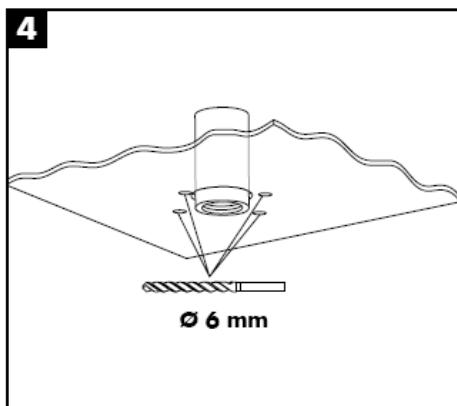

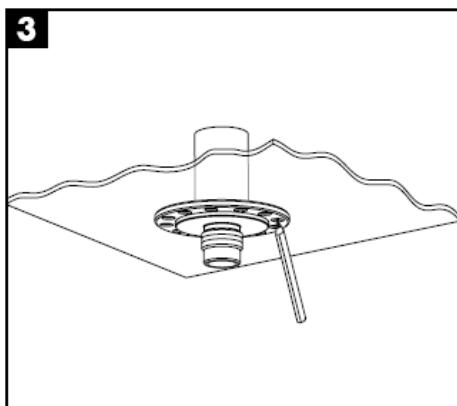

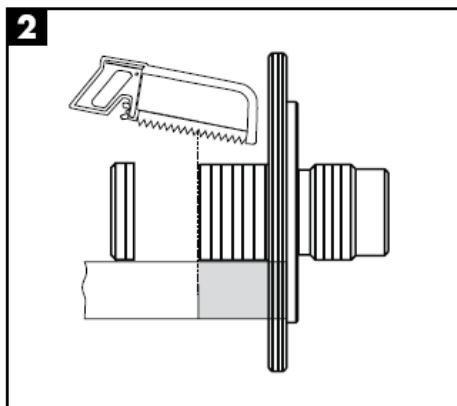

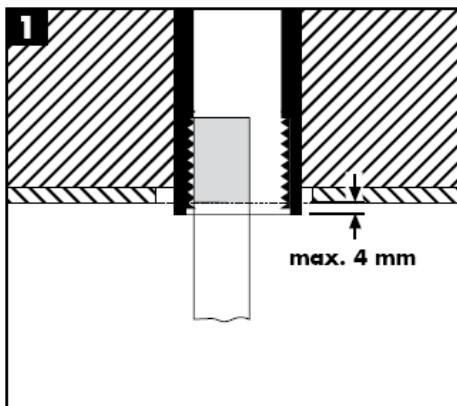

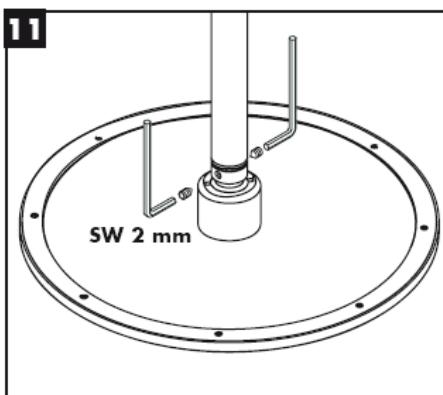

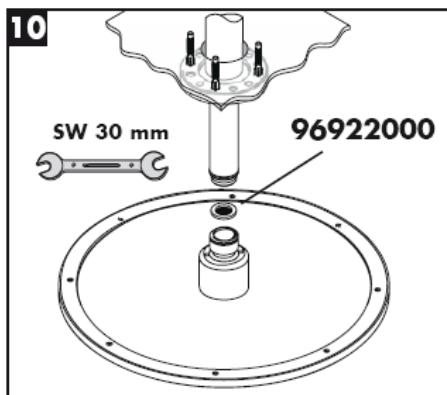

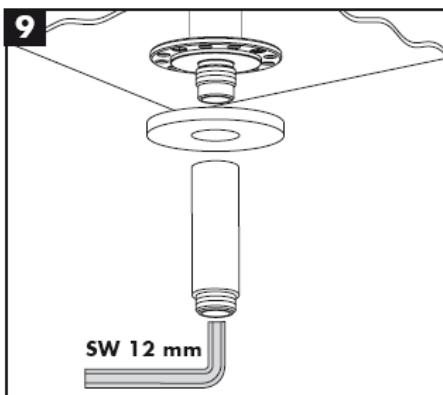

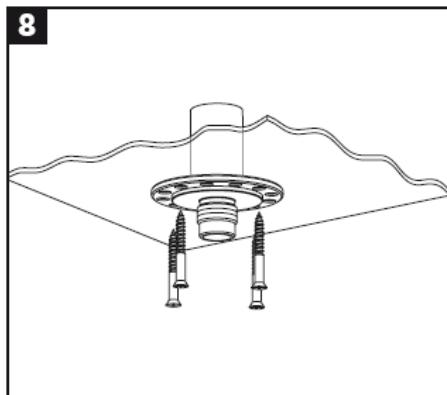

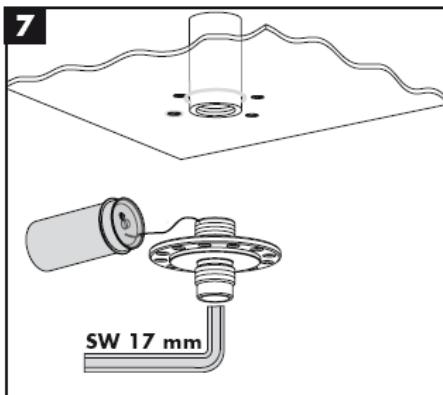

Ak je sprcha vo funkčnom stave, má spolu s rámom sprchy hmotnosť cca 10 kg. Preto sa smie používať upevňovací materiál vhodný len pre murivo! Priložené skrutky a hmoždinky sú určené len pre masívne murivo.

Môže sa použiť iba taký upevňovací materiál, ktorý je pre murivo vhodný! Priložené skrutky a hmoždinky sú určené iba pre plné murivo.

Priepustnosť odpadu musí byť dostatočne dimenzovaná.

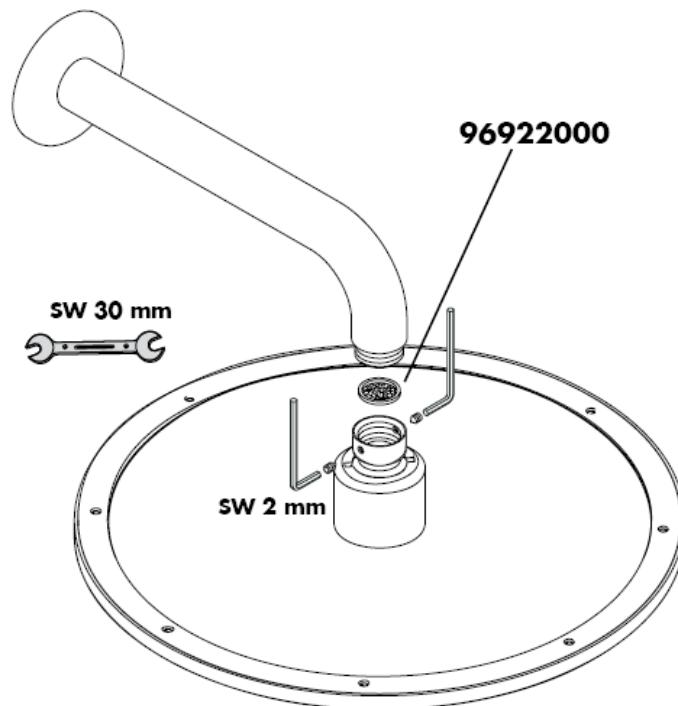

Optimálna funkcia je zaručená iba s High Flow termostaty Hansgrohe.

---

Do prívodu musí byť zabudované so sprchou dodávané sítko, aby zachytilo nečistoty vyplavené z vodovodnej siete. Vyplavené nečistoty môžou ovplyvniť funkciu sprchy, alebo spôsobiť jej poškodenie. Na takto vzniknuté škody sa nevzťahuje záruka firmy Hansgrohe.

## Montáž

**Pozor!** Batéria sa musí montovať, preplachovať a testovať podľa platných noriem!

## Nastavenie

Ak sa v mieste odberu líši zmeraná teplota od teploty nastavenej na termostate, je nutné vykonať korekciu.

Postupuje sa takto: Otáčajte rukoväťou so stupnicou, pokiaľ dosiahne teplotu vody v mieste odberu 38 C. Uvolnite skrutku rukoväťe, rukoväť stiahnite a natočte ju do polohy pre 38 C. Rukoväť nasuňte späť a dotiahnite skrutku rukoväťou (viď strana 22).

## Obmedzenie teploty

Rozsah teplôt je bezpečnostnou poistkovou obmedzený na 38 C. Pokiaľ sa požaduje vyššia teplota, je možné prekonať bezpečnostnú poistku stlačením červeného tlačidla.

## Safety Function

Vďaka Safety Function je možné vopred nastaviť najvyššiu požadovanú teplotu, napr. max. 42 C. viď strana 21.

## Technické údaje

Prevádzkový tlak:	max. 1 MPa
Doporučený prevádzkový tlak:	0,1 – 0,5 MPa
Skúšobný tlak:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Teplota teplej vody:	max. 80° C
Doporučená teplota teplej vody:	65° C
Prietok:	ca. 58 l/min 0,3 MPa

## Údržba

Termostatické batérie nevyžadujú žiadnu zvláštnu údržbu. Pri spätných ventiloch sa musí podľa DIN EN 1717 v súlade s národnými alebo regionálnymi predpismi testovať ich funkčnosť (aspoň raz ročne). Skontrolujte pri tejto príležitosti aj lapače nečistôt, ktoré sa nachádzajú na MTC regulačnej jednotke (6.1). Po montáži MTC regulačnej jednotky (6) skontrolujte bezpodmienečne teplotu na výtoku, ako je popísané v bode „Nastavenie“. Predtým rozhodne skontrolujte, či je zapnuté zásobovanie teplou vodou a či je v mieste odberu voda s maximálnou teplotou k dispozícii.

Aby bol zaistený ľahký chod regulačnej jednotky, mal by sa termostat z času čas nastaviť na maximálne horúcu a maximálne studenú vodu.

硅胶（不含醋酸）

恒温阀芯的安全功能可以预先设定所希望的最高出水温度，例如最高温度为42°C

校准

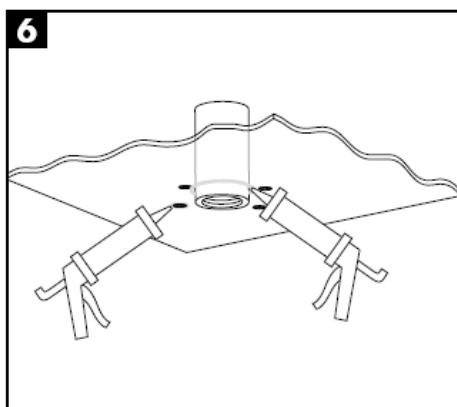

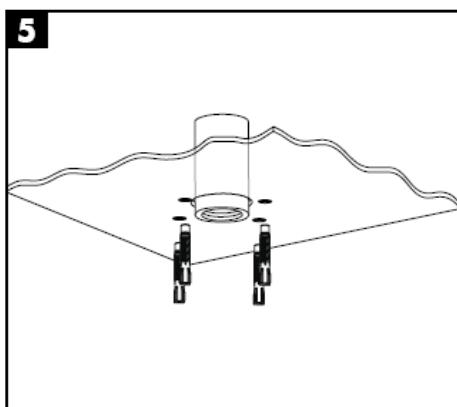

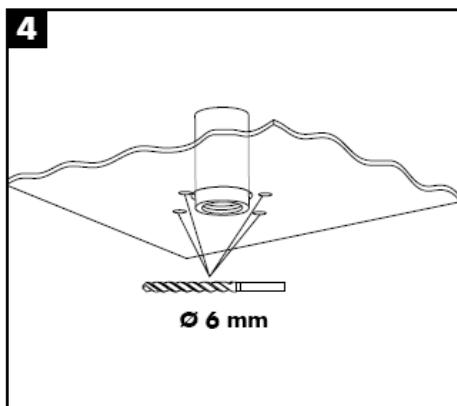

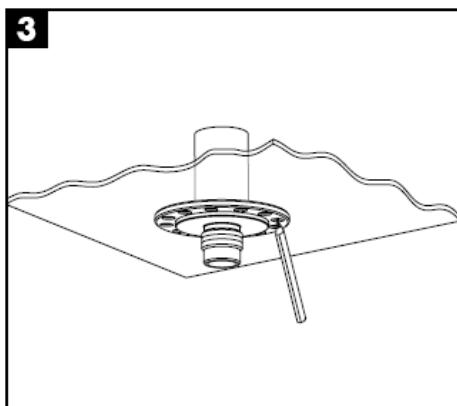

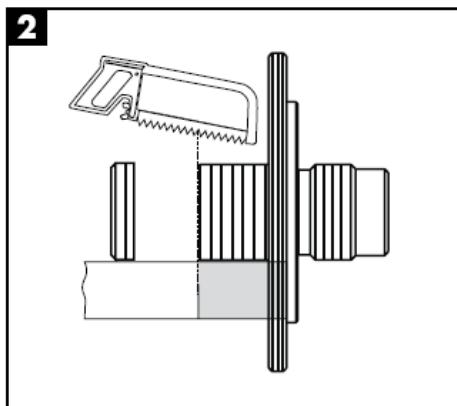

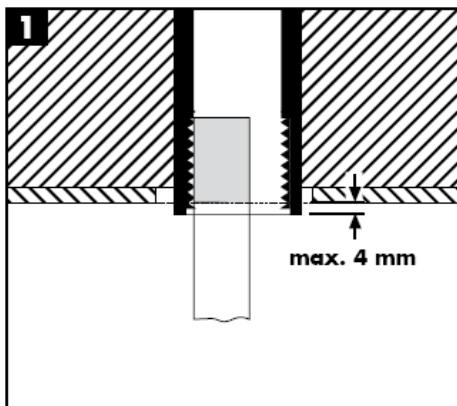

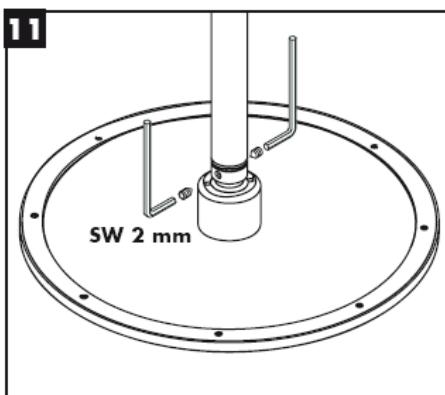

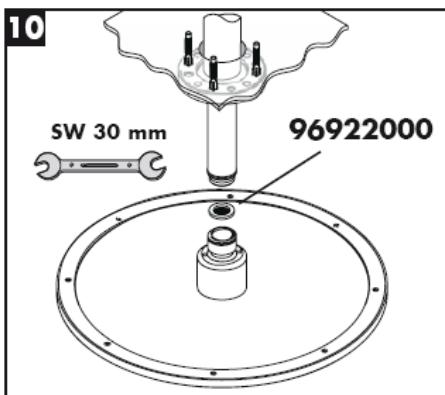

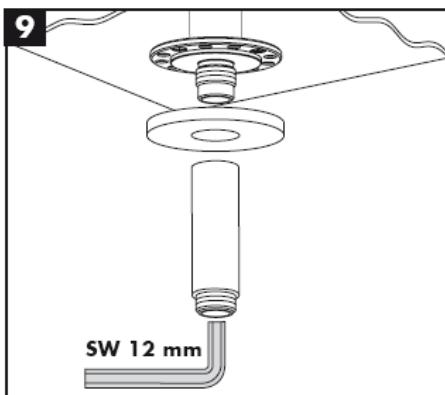

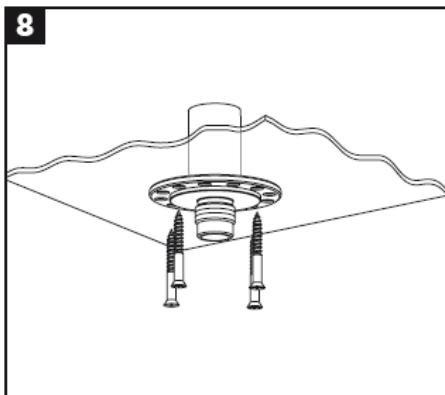

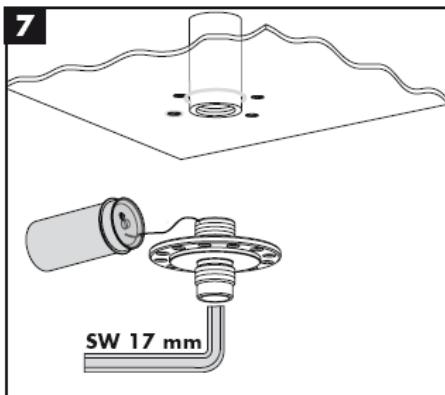

如果使用莲蓬头，则该莲蓬头连同莲蓬头臂一起重约为10千克。四周只使用适合于砖墙的固定材料！所附螺栓和膨胀螺栓只用于实心砖墙。

仅使用适合砌砖工程的紧固材料！所附的螺丝和销钉仅适用于实心砖。

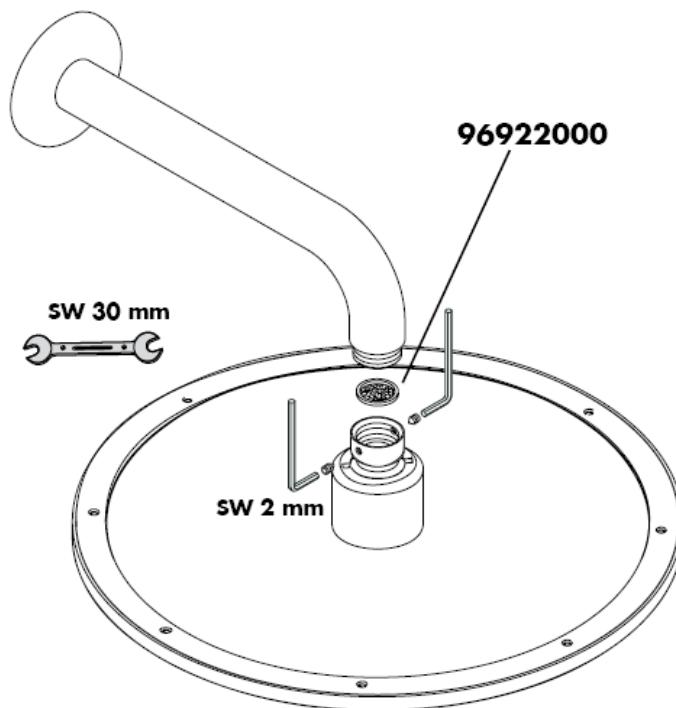

废水管的性能必须具有充足的尺寸。

只有与汉斯格雅高流量自动调温器组合时，方担保最佳的性能。

必须装上花洒所附带的滤网密封垫，以过滤管道里的杂质污物。杂质污物会影响花洒的功能和/或损坏花洒的功能部件，由此而产生的产品损坏不属于汉斯格雅的保修范围。

## 安装

### 注意！

必须按照现行的规定安装，冲洗和测试产品！

## 校准

如果在分出点测量的温度不同于标度尺上设定的温度，需要进行更正。调整温度的步骤如下：转动设定旋钮，直到 38 °C

的水从出口流出。松开设定旋钮的螺丝。拆下设定旋钮，并转动到 38 °C 的位置。再次安装设定旋钮，并上紧螺丝（请参见第22页）。

## 温度限制

出水温度由安全阀限制在38 °C（防止烫伤）。

## 安全功能

恒温阀芯的安全功能可以预先设定所希望的最高出水温度，例如最高温度为42°C 参见第页 21.

## 技术参数

工作压强:	max. 1 MPa
推荐工作压强:	0,1 – 0,5 MPa
测试压强:	1,6 MPa (1 MPa = 10 bar = 147 PSI)
热水温度:	max.80° C
推荐热水温度:	65° C
流速:	ca.58 l/min 0,3 MPa

## 保养

恒温龙头没有特殊的保养方式。

单向阀必须在符合国家或当地的法律的情况下按照DIN EN 1717定期检查（至少一年一次）。

在此情况下，请同时检查MTC恒温阀芯（17.1）上的过滤网。在安装MTC恒温阀芯（17）后，请务必在拿掉“调节器”的情况下检测水温。在调节时，请检查热水供水是否正常及热水能提供的最高温度。

为了保证恒温器的稳定运转，请务必定期从最热到最冷转动调温器。

### 备用零件 参见第页 3

Силикон (не содержит уксусной кислоты!)

С помощью функции Safety Function может быть задана максимальная температура воды, например 42 °C.

#### Настройка

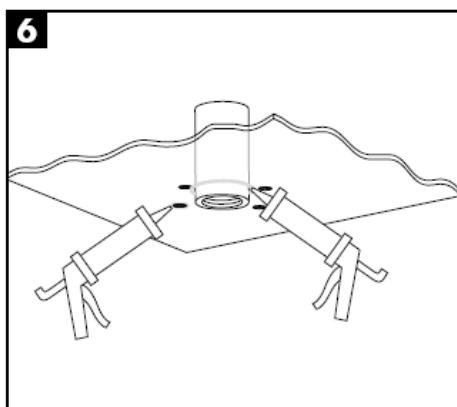

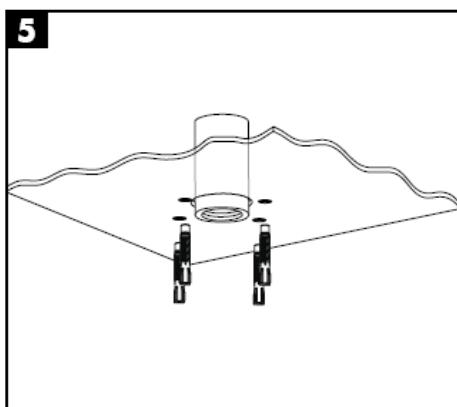

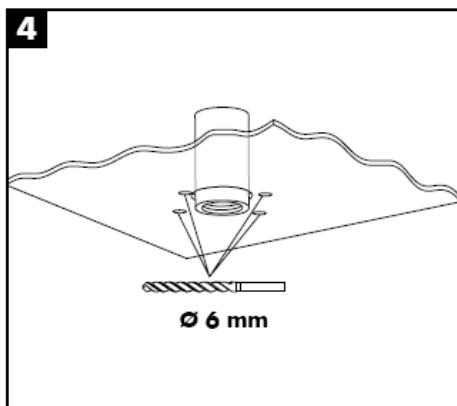

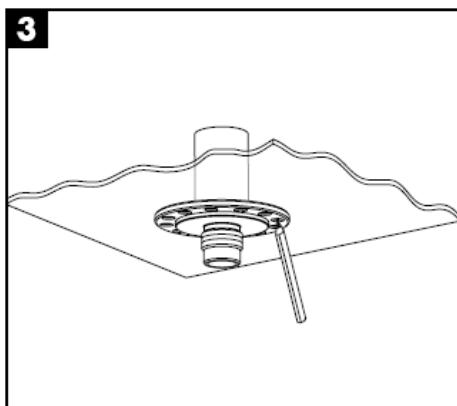

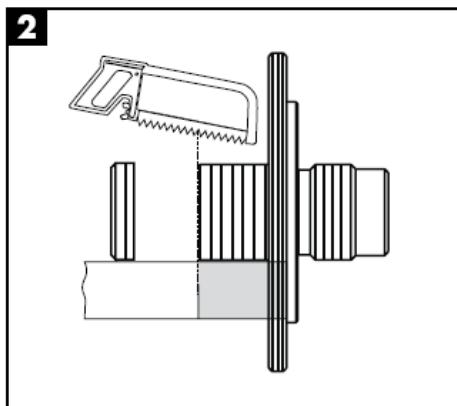

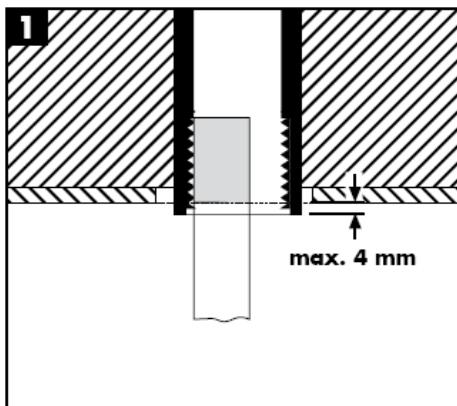

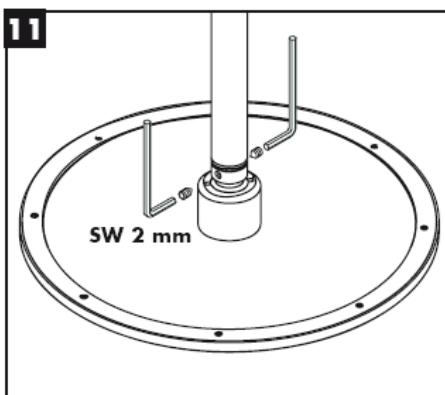

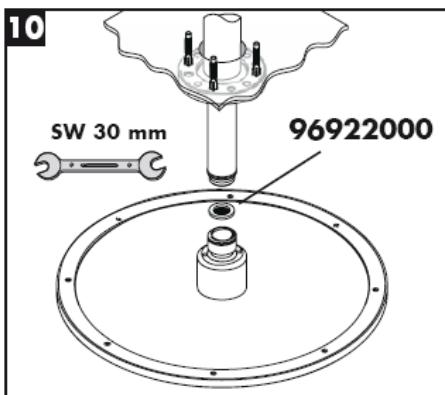

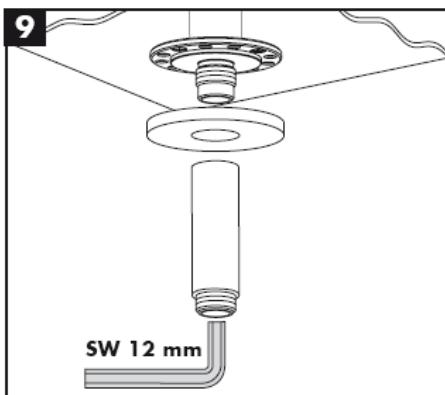

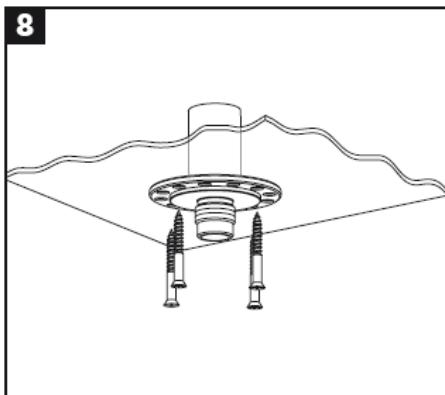

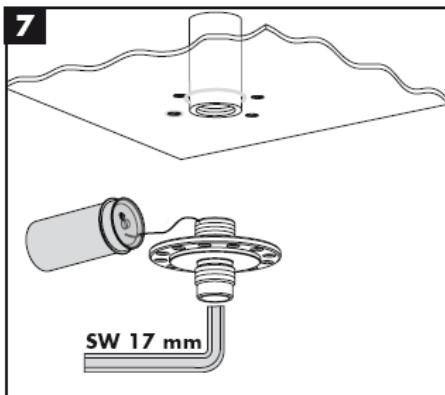

В рабочем состоянии вес душа со стойкой составляет прибл. 10 кг. По этой причине необходимо использовать подходящий крепеж для каменной стены! Входящие в комплект поставки болты и дюбеля подходят только для капитальной каменной стены.

Разрешается использовать только крепежный материал, предназначенный для кирпичной кладки! Прилагаемые винты и дюбели предназначены только для монолитных стен.

Слив должен иметь достаточную производительность.

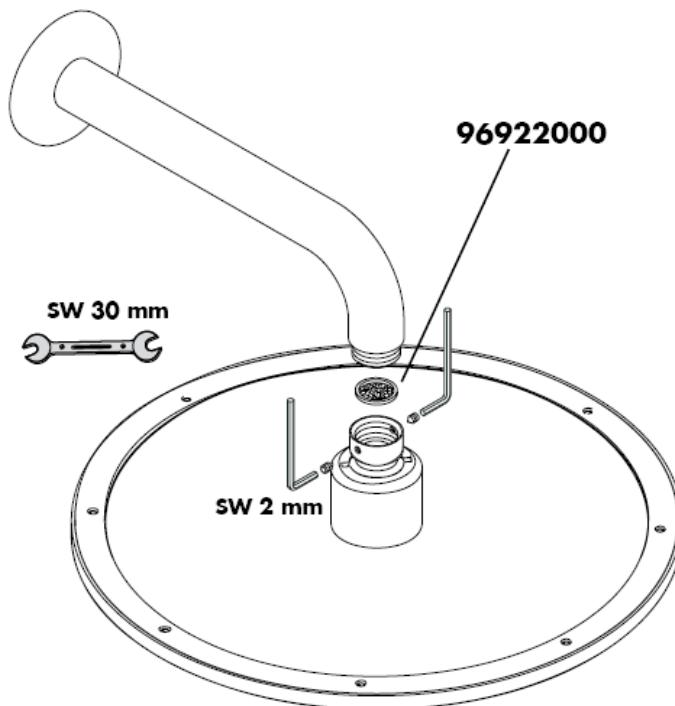

Оптимальное функционирование гарантируется только при использовании в комбинации с терmostатом High Flow Hansgrohe.

---

Для предотвращения попадания частиц грязи из водопроводной сети необходимо установить фильтр, прилагаемый к ручному душу. Частицы грязи могут нарушить отдельные функции и/или привести к повреждению функциональных деталей ручного душа, Hansgrohe не несет ответственность за повреждения вследствие отсутствия фильтра.

## Монтаж

**ВНИМАНИЕ!** Смеситель должен быть смонтирован по действующим нормам и в соответствии с настоящей инструкцией, проверен на герметичность и безупречность работы.

## Настройка

Настройка работы необходима, если фактическая температура смешанной воды значительно отличается от показаний шкалы, нанесенной на изделие. Для настройки произведите следующие действия:  
Поворотом рукоятки термостата добейтесь, чтобы температура воды из душа была 38 град.С.  
Ослабив крепление рукоятки, переставьте ее в положение, указывающее на температуру 38 град. С и закрепите рукоятку в этом положении.

## Ограничение температуры

Температура смешанной воды ограничена 38 град.С (100 град.F). Если необходимо получить более горячую воду, нужно, нажав на красную кнопку продолжать вращение рукоятки до достижения необходимой температуры.

## Safety Function

С помощью функции Safety Function может быть задана максимальная температура воды, например 42 С. см. стр. 21.

## Технические данные

Рабочее давление:	max. 1 МПа
Рекомендуемое рабочее давление:	0,1 – 0,5 МПа
Давлении:	1,6 МПа (1 МПа = 10 bar = 147 PSI)
Температура горячей воды:	max. 80° С
Рекомендуемая темп. гор. воды:	65° С
Пропускная способность:	ca.58 l/min 0,3 МПа

## Техническое обслуживание

Термостат не требует специального обслуживания. Защита обратного тока должна регулярно проверяться (минимум один раз в год) по стандарту DIN EN 1717 или в соответствии с национальными или региональными нормативами Состояние фильтра (6.1), установленного на термостатическим картриджке. После замены термоэлемента необходимо проверить работу смесителя и, проверив условия водоснабжения, произвести настройку (см. выше), изменяя положение стопорного кольца. Для гарантии плавного изменения температуры и долгого срока службы необходимо периодически поворачивать ручку регулировки температуры из положение максимально горячая в положение максимально холодная вода.

Для гарантии плавного изменения температуры и долгого срока службы необходимо периодически поворачивать ручку регулировки температуры из положение максимально горячая в положение максимально холодная вода.

A biztonsági funkcióinak köszönhetően a kívánt hőmérsékletet pl. 42 Celsius fokban maximálhatjuk.

#### Beszerelés

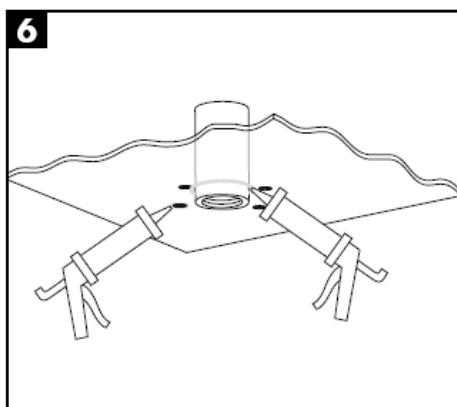

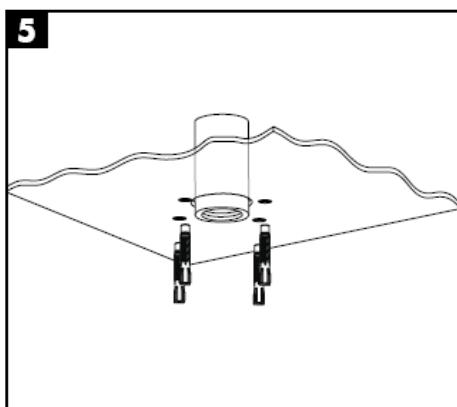

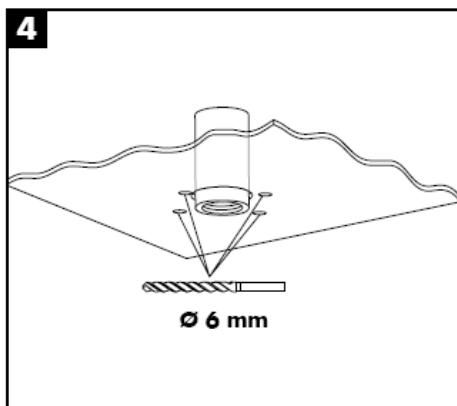

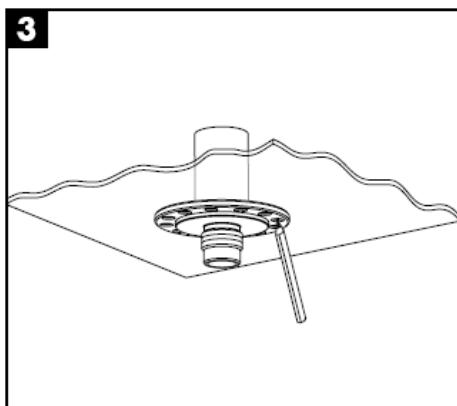

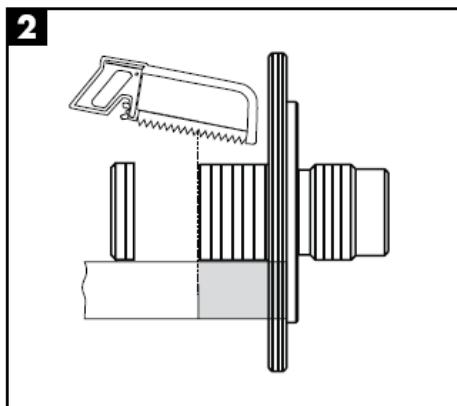

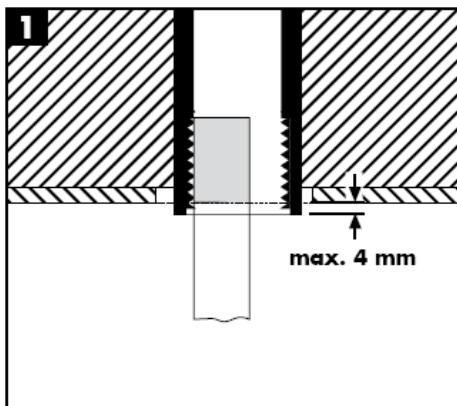

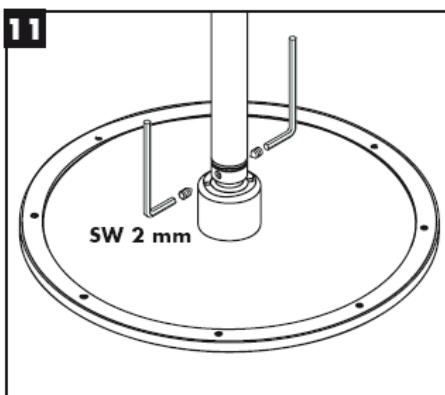

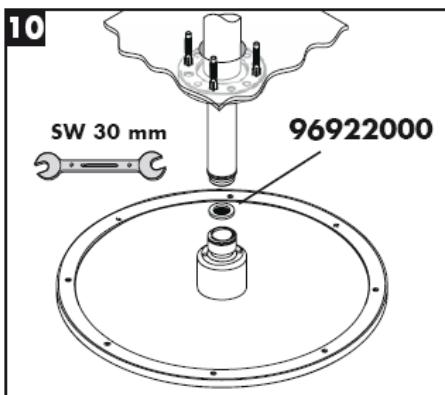

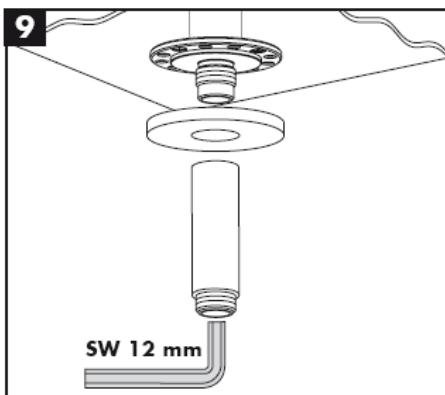

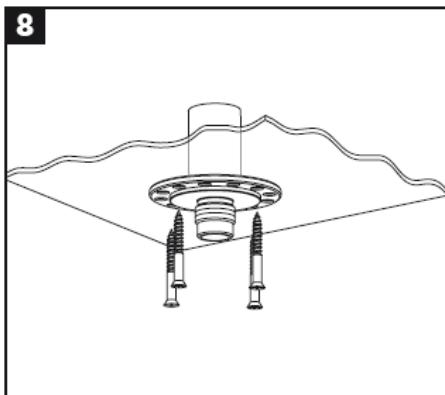

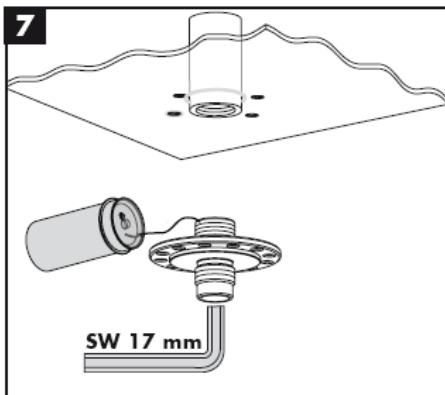

Ha a zuhany működik, akkor ennek a zuhanykarral együtt kb. 10 kg a tömege. Ezért csak a falnak megfelelő rögzítő anyagot szabad használni! A mellékelt csavarok és tiplik csak tömör falakhoz használhatók.

Csak a falazathoz alkalmas rögzítőanyag használható! A mellékelt csavarok és dűbelek csak masszív falazathoz valók.

A kifolyási teljesítményt megfelelően kell dimenzionálni.

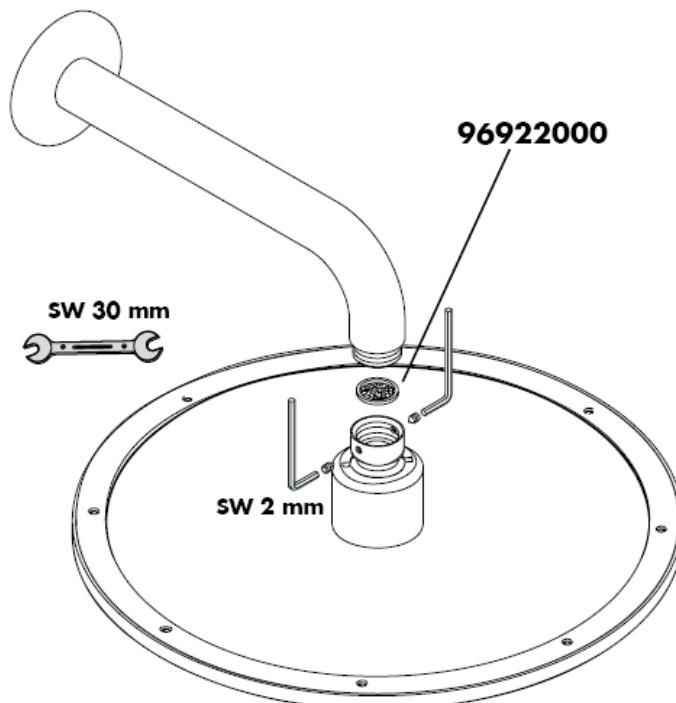

A megfelelő működést csak Hansgrohe High Flow termosztátoknak.

---

A kézi zuhanyhoz csomagolt szűrőtömítést be kell szerelni a vízhálózatból származó szennyeződések kiküszöbölésére. A beáramló szennyeződések akadályozhatják és / vagy teljesen tönkre is tehetik a zuhanyműködést. Az ezekből adódó károkért a Hansgrohe nem felel.

## Szerelés

**Figyelem!** A csaptelepet az érvényben lévő előírásoknak megfelelően kell felszerelni, átöblíteni és ellenőrizni!

## Beszerezés

Korrekciora van szükség, amennyiben a kiállásnál mért hőmérséklet eltér a termosztát által mért hőfuktól. Ennek során a következőket kell figyelembe venni: Csavarjuk el a skálázott fogantyút, egészen addig, amíg a kiállási pontnál a vízhőmérséklet a 38 °C fokot el nem éri. Lazíttsuk meg a fogantyúcsavart, húzzuk vissza a fogantyút és csavarjuk el a 38 °C fokos mértéig. Rögzítsük a fogantyúcsavart.

## A hőmérséklet behatárolása

A hőmérséklet-tartományt a biztonsági zár segítségével 38 °C-nál korlátozzuk (forrázásvédelem). Amennyiben magasabb hőmérsékletekre van szükség, a biztonsági gomb megnyomásával a 38 °C—os zár átléphető.

## Safety Function (Biztonsági funkció)

A biztonsági funkcionak köszönhetően a kívánt hőmérsékletet pl. 42 Celsius fokban maximálhatjuk. Lásd a oldalon 21.

## Műszaki adatok

Üzemi nyomás:	max. 1 MPa
Ajánlott üzemi nyomás:	0,1 – 0,5 MPa
Nyomáspróba:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Forróvíz hőmérséklet:	max. 80 °C
Forróvíz javasolt hőmérséklete:	65 °C
Átfolyási teljesítmény :	ca. 58 l/min 0,3 MPa

## Karbantartás

A termosztátnak nem szükséges semmilyen különleges karbantartása. A visszafolyásgátlók működése a DIN EN 1717 szabványnak megfelelően, a nemzeti vagy területi rendelkezésekkel összhangban, évente egyszer ellenőrzendő! Ellenőrizze ilyenkor a szennyeződést felfogó szűrőt is, amely az MTC-szabályozóegységen (6.1) található. Az MTC-szabályozóegység (6) beszerelése után feltétlenül ellenőrizze a kifolyó víz hőmérsékletét, mint azt a „Beszabályozás” pont alatt leírtuk. Előzetesen feltétlenül ellenőrizze, hogy a melegvíz ellátás be van-e kapcsolva és hogy a melegvíz maximális hőmérséklete a csapnál rendelkezésre áll-e.

Ahhoz, hogy a szabályozóegység jól működjön, a termosztátot időről időre teljesen melegre és teljesen hidegre kell állítani.

Tämä toiminta on taattuna • alkaen.

Silikoni (etikkahappovapaa!)

Safety Function:ista johtuen haluttu maksimilämpötila voidaan esiasettaa, esimerkiksi maks. 42 °C.

#### Säätö

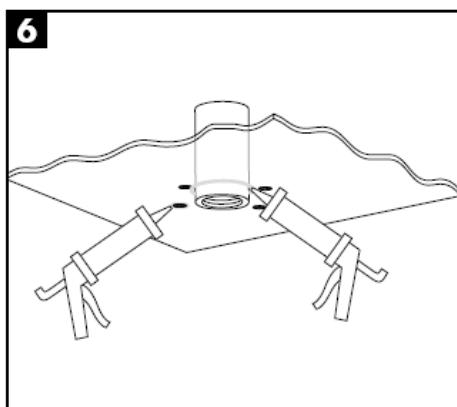

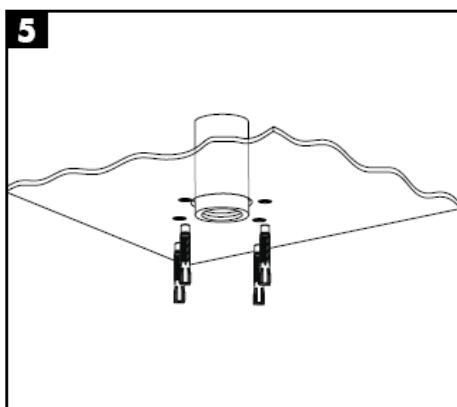

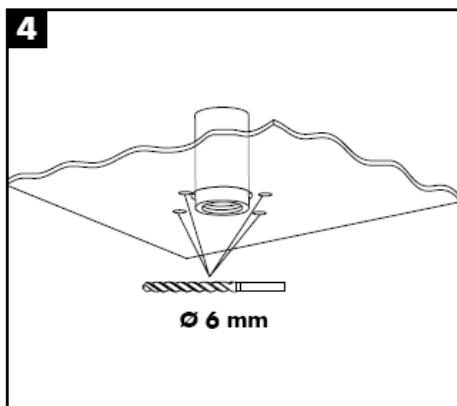

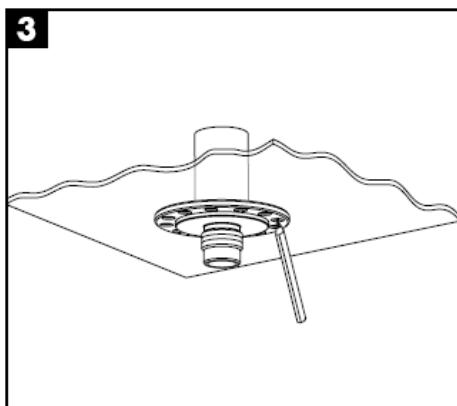

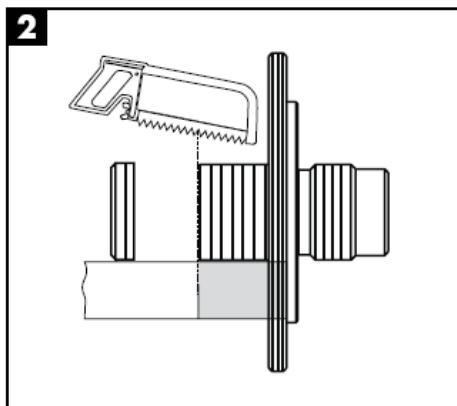

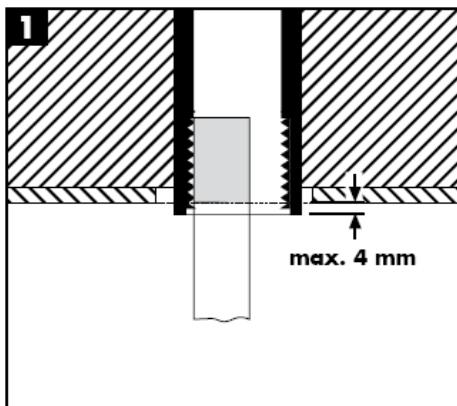

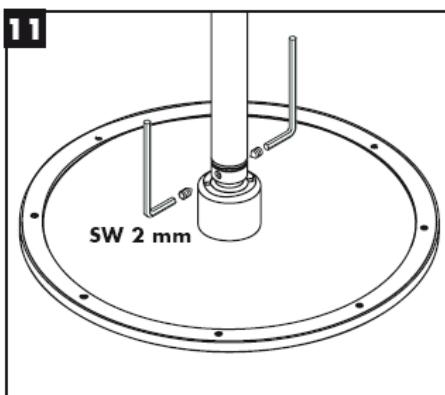

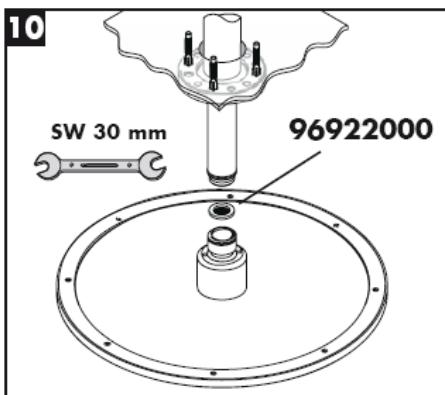

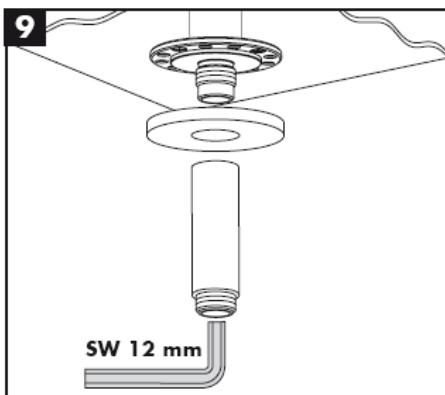

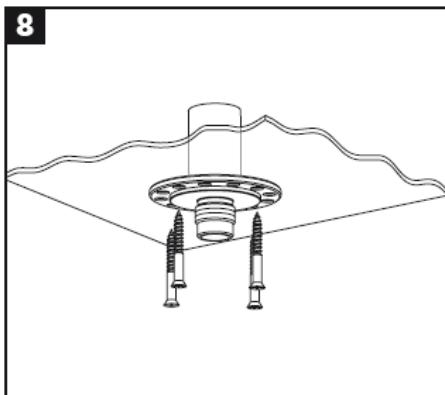

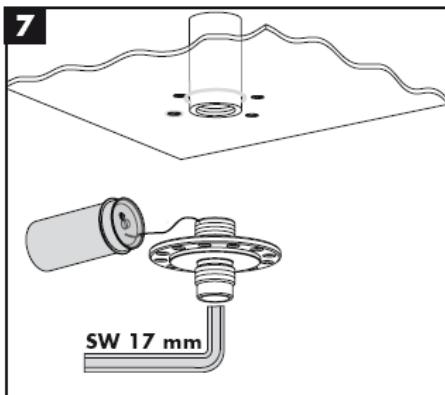

Kun suihku on toiminnassa, se painaa yhdessä suihkuvarren kanssa n. 10 kg. Siksi on käytettävä seinäpintaan soveltuva kiinnitysmateriaalia/-välineitä! Mukana olevat ruuvit ja kiinnitystulpat on tarkoitettu vain betoni-/täystiiliseinään.

On käytettävä vain seinämariaaliin sopivia kiinnitystarvikkeita! Mukana toimitetut ruuvit ja kiinnitystulpat soveltuват valettuun betoniseinään.

Poisvirtausteho on mitoitettava riittävän suureksi.

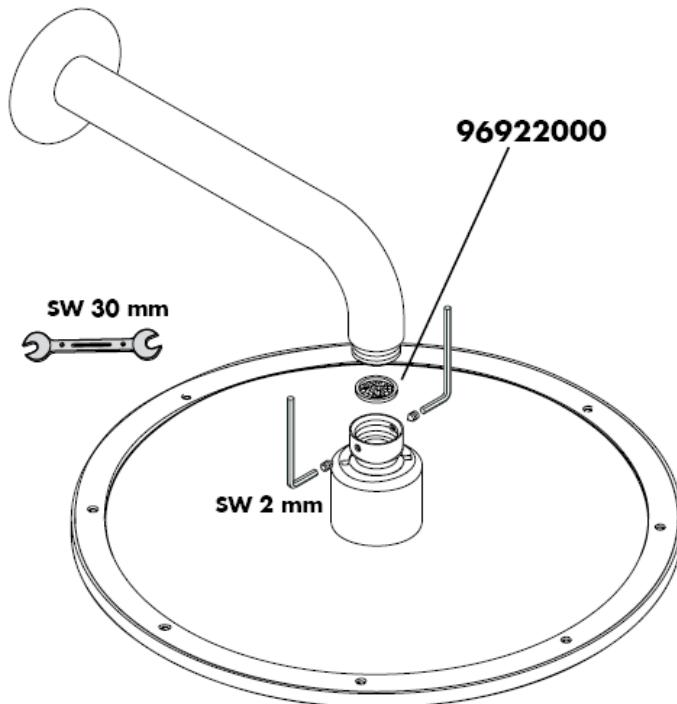

Optimaalinen toiminta on taattu vain Hansgrohe High Flow -termostaattien yhteydessä.

---

Käsisuihkun mukana toimitettu siittiiviste on asennettava paikalleen, jotta lian huuhtoutuminen vesijohtoverkostosta käsisuihkuun estyy. Huuhtoutuvat likahiuikkaset voivat häirittää suihkun toimintaa tai vahingoittaa toimintaosia. Hansgrohe ei vastaa tästä aiheutuneista vahingoista.

**Asennus**

**Huomio!** Kaluste on asennettava, huuhdeltava ja tarkastettava voimassa olevien määräysten mukaisesti!

**Säätö**

Korjaus on tarpeen, jos käyttöpisteessä mitattu veden lämpötila eroaa termostaattiin säädetystä lämpötilasta. Toimi seuraavasti: kierrä asteikkokahvaa kunnes käyttöpisteessä veden lämpötila on 38 °C. Irrota kahvan ruuvi, vedää kahvaa ulos ja käännä asentoon 38 °C. Paina kahva takaisin ja kiristä kahvan kiinnitysruuvi (katso sivua 22).

**Lämpötilan rajoitin**

Turvaestin rajoittaa lämpötila-alueen maks. 38 °C asteeseen liian kuuman veden aiheuttamien palovammojen estämiseksi. Jos halutaan korkeampaa lämpötilaa, 38 °C rajoitus voidaan ohittaa painamalla turvanuppia.

**Safety Function**

Safety Function:ista johtuen haluttu maksimilämpötila voidaan esiasetataa, esimerkiksi maks. 42 °C. Katso sivu 21.

**Tekniset tiedot**

Käyttöpaine:	max. 1 MPa
Suositeltu käyttöpaine:	0,1 – 0,5 MPa
Koestuspaine:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Kuuman veden lämpötila:	max. 80 °C
Kuuman veden suosituslämpötila:	65 °C
Läpivirtausmäärä:	ca. 58 l/min 0,3 MPa

**Huolto**

Termostaatit eivät tarvitse mitään erityistä huoltoa. Vastaventtiilien toiminta on tarkastettava säännöllisesti paikallisten ja kansallisten määräysten mukaisesti (DIN 1988, kerran vuodessa). Tarkasta tässä yhteydessä myös likasihidit, jotka ovat MTC-säätyöksikössä (6.1). MTC-säätyöksikön (6) asentamisen jälkeen ulostulevan veden lämpötila on tarkastettava kuten kohdassa "Säätö" on kuvattu. Tarkasta ehdottomasti sitä ennen, onko kuuman veden syöttö kytketty päälle ja, että syöttöpisteessä on kuuman veden maks. lämpötila.

Säätyöksikön kevytkäytöisyden takaamiseksi, säädä säätyöksikkö ajoittain täysin kylmälle ja täysin kuumalle.

Silikon (fri från ättiksyra!)

Med hjälp av Safety Function kan du ställa in den önskade maximaltemperaturen till exempelvis 42 C och så förhindra skältningsrisk för barn.

Inställning av maxtemperatur

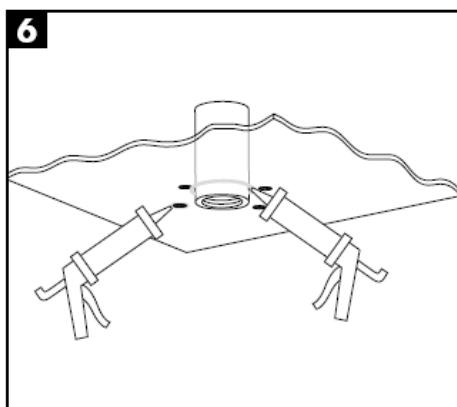

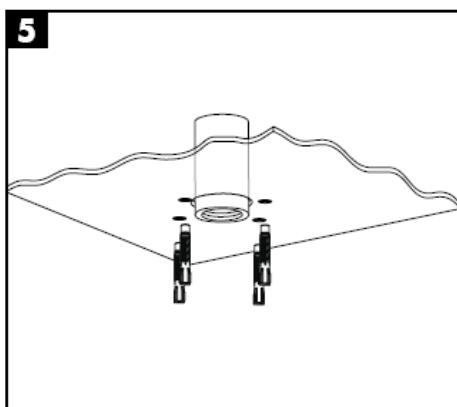

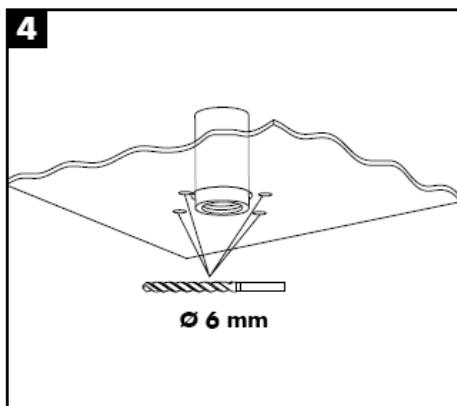

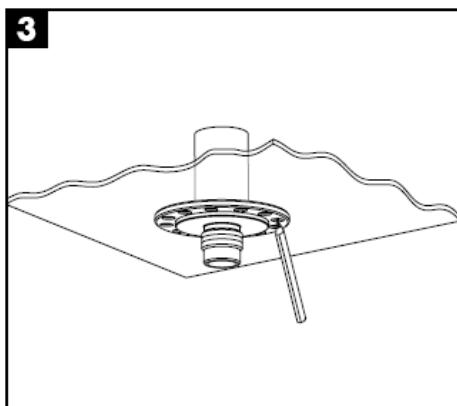

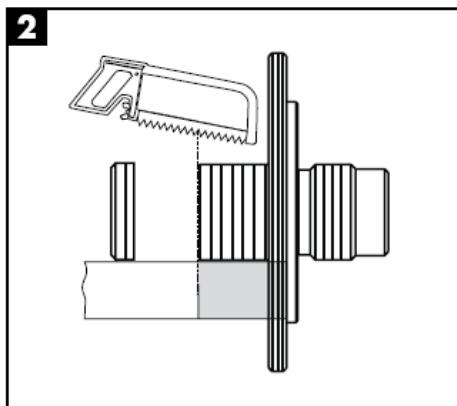

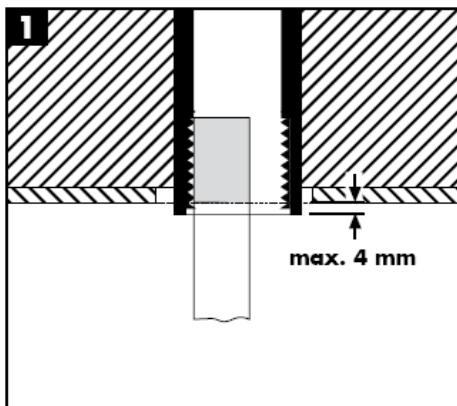

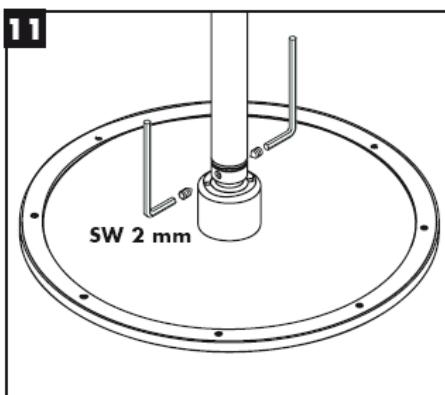

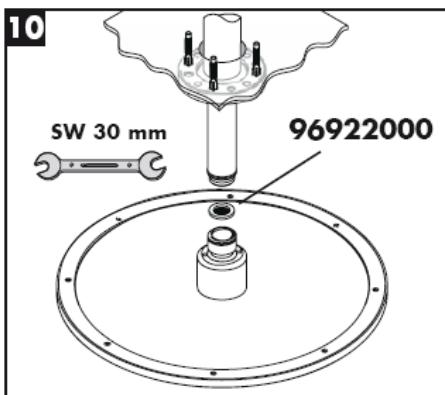

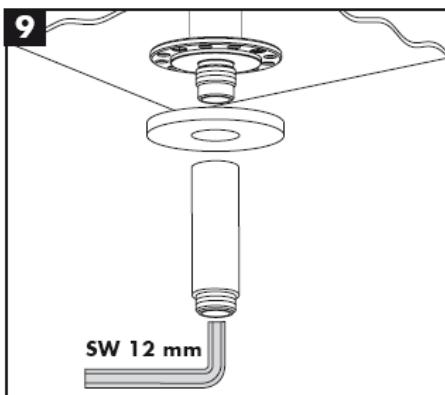

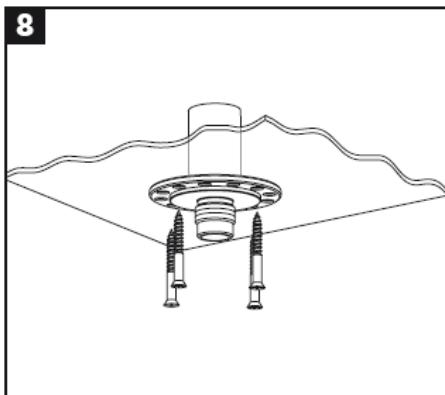

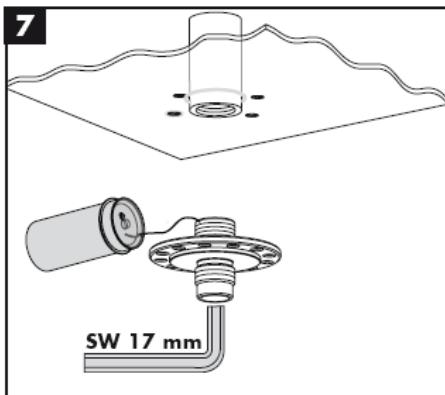

När duschen används väger den och duscharmen ca 10 kg tillsammans. Därför är det bara tillåtet att använda monteringsmaterial som passar till murverket! Medföljande skruvar och plugg är enbart avsedda för massivt murverk.

Endast fastsättningsmaterial som passar till murverk får användas! Medföljande skruvar och plugg ska endast användas i massivt murverk.

Tömningskapaciteten måste vara tillräcklig.

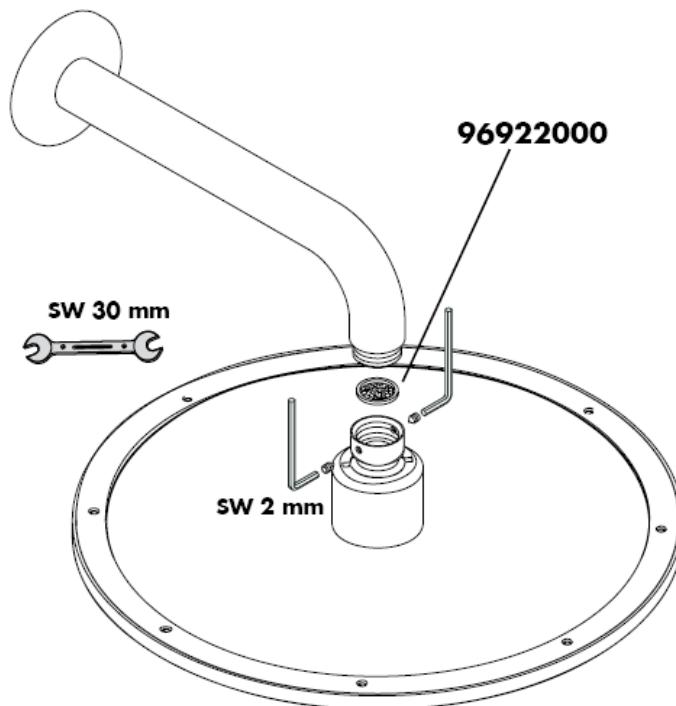

Optimal funktion garanteras bara tillsammans med Hansgrohe High Flow termostater.

---

Silpackningen som följer med duschen måste monteras för att undvika att smuts från ledningsnätet tränger in. Smuts som spolas in kan påverka funktionerna och/eller leda till skador på funktionsdelar i duschen. Hansgrohe frånsäger sig allt ansvar för skador som kan härsledas till detta.

## Montering

**OBS!** Blandaren måste installeras, genomspolas och testas enligt gällande föreskrifter.

### Inställning av maxtemperatur

En korrigering krävs när temperaturen vid utflödet avviker från den temperatur som är inställd på termostaten. Tänk då på följande: Vrid på skalgreppet tills 38 °C vatten kommer ut. Släpp greppskruven, drag tillbaka greppet och vrid till 38 °C. Sätt greppet på plats och drag fast greppskruven (se sidan 22).

### Temperaturinställning

En spärr är inbyggd för att begränsa temperaturen till 38 °C. Önskas högre temperatur så kan 38 °C spären kringgås om man tycker in säkerhetssnappen.

### Safety Function

Med hjälp av Safety Function kan du ställa in den önskade maximaltemperaturen till exempelvis 42 °C och så förhindra skällningsrisk för barn. se sidan 21.

### Tekniska data

Driftstryck:	max. 1 MPa
Rek. driftstryck:	0,1 – 0,5 MPa
Tryck vid provtryckning: (1 MPa = 10 bar = 147 PSI)	1,6 MPa
Varmvattentemperatur:	max. 80 °C
Rek. varmvattentemp.:	65 °C
Genomströmningmängd:	ca. 58 l/min 0,3 MPa

## Skötsel

Termostater kräver ingen speciell service. Backventilers funktion måste kontrolleras regelbundet enligt nationella eller regionala bestämmelser (DIN 1988 en gång per år) i enlighet med DIN EN 1717. Kontrollera även smutsfiltren som sitter på termosensorn (6.1) vid detta tillfälle. När termosensorn (6) har monterats måste uttemperaturen kontrolleras, enligt beskrivning under avsnitt "Inställning". Kontrollera först om varmvattentemperaturen är inkopplad och att max. varmvattentemperatur är uppnådd vid tappstället.

För att garantera att termostaten ej kalkar igen, ska den regelbundet, en gång per vecka, konditioneras. Det sker genom att man några gånger snabbt slås om temperaturen från hett till kallt och tillbaka.

Silikonas (be acto rūgštis!)

"Safety" funkcija karšto vandens temperatūra gali būti iš anksto ribota iki, pvz., ne aukštesnės kaip 42 °C.

#### Nustatymas

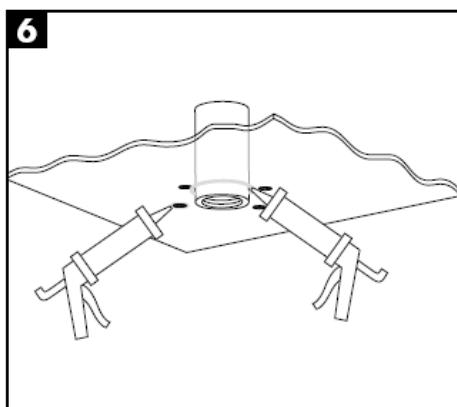

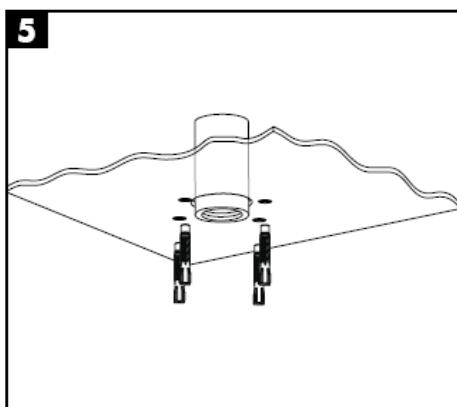

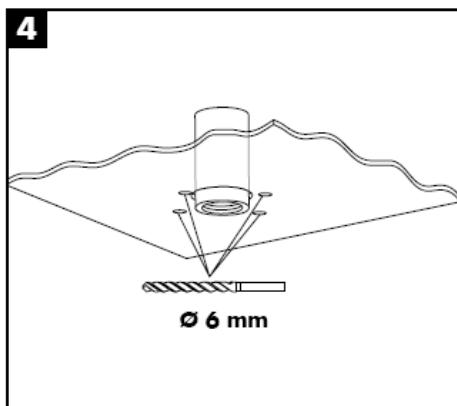

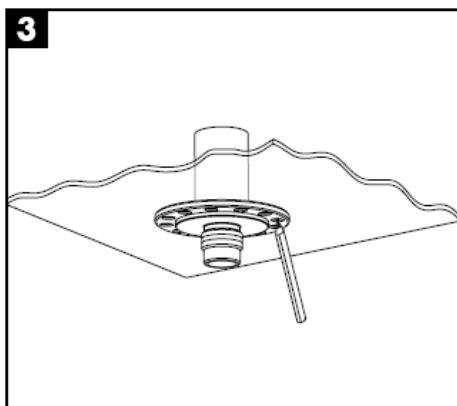

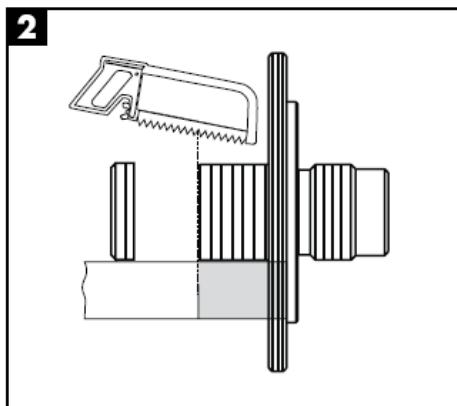

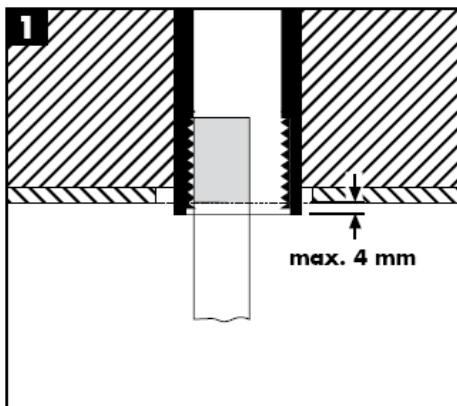

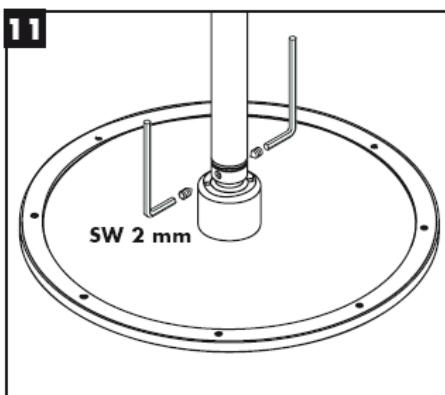

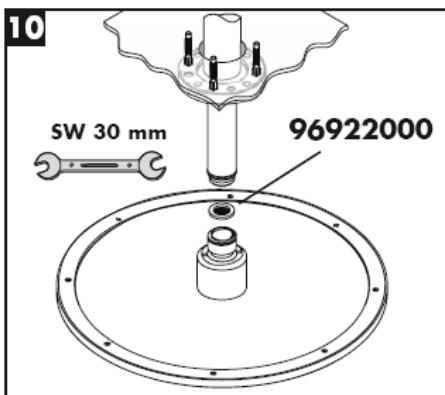

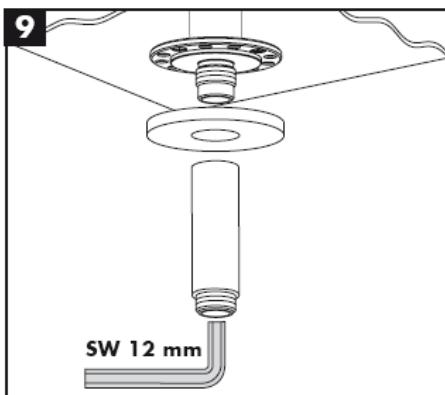

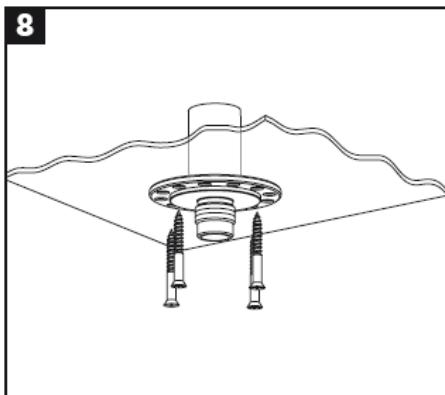

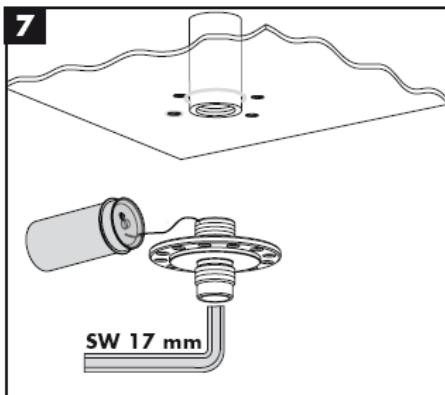

Kai dušas veikia, jis kartu su laikikliu sveria apie 10 kg. Todėl reikia naudoti tik mūro sienai tinkamas tvirtinimo medžiagą! Pridėti varžtai ir tvirtinimo elementai tinka tik masyvaus mūro sienai.

Naudokite tik mūrijimui naudojamą rišančią medžią! Pakuočėje esantys varžtai pritaikyti tik vientiso mūro sienai.

Vandens išleidimas privalo būti pakankamo dydžio.

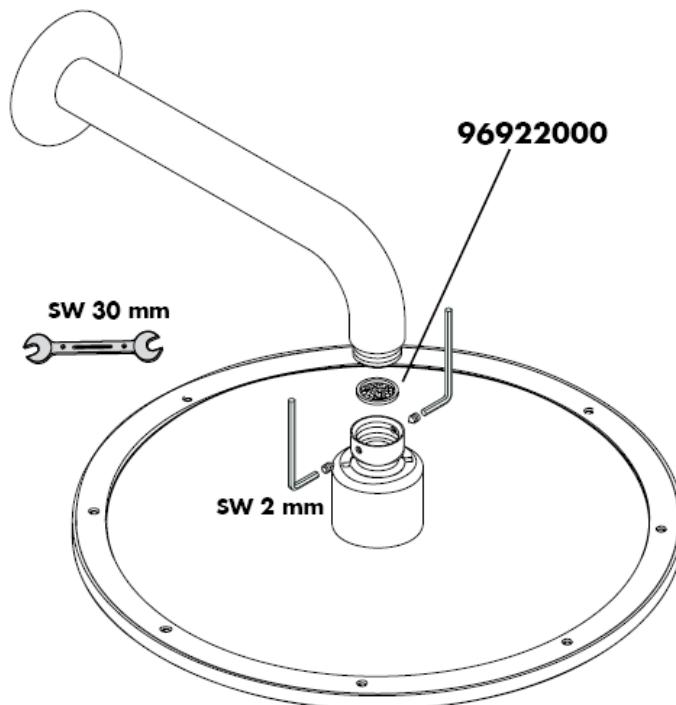

Optimali funkcija garantuojama tik su "Hansgrohe" "High Flow" didesnio pralaidumo termostatu.

---

Tinklelis, kuris yra rankų dušass pakuočėje, privalo būti įstatytas, kad būtų apsaugota nuo išorės nešvarumų.  
Nešvarumai gali pakenkti rankų dušass funkcionalumui ir (arba) sugadinti rankų dušass funkcinės dalis.  
Tokiu atveju ""Hansgrohe"" atsakomybės neprisiima.

**Montavimas**

**Dėmesio!** Maišytuvą privalo būti montuojamas, išleidžiamas ir patikrinamas pagal galiojančias normas!

**Nustatymas**

Jei ant rankenėlės nurodyta temperatūra nesutampa su esama, ją reikia pareguliuoti. Temperatūrą reguliuokite taip: sukite temperatūros rankenėlę, kol vandens temperatūra taps 38 °C. Atsukite varžtą, pakeiskite ribotuvo nuostatas, ir rankenėlę vėl prisukite (žr. 22 psl.)

**temperatūros ribotuvas**

Sumaišyto vandens temperatūra ribota 38 °C (100 F). Jei reikia karštesnio vandens, nuspausti saugos mygtuką ir pasukti rankenėlę iki norimos temperatūros.

**Apsaugos funkcija**

"Safety" funkcija karšto vandens temperatūra gali būti iš anksto ribota iki, pvz., ne aukštesnės kaip 42 °C. Žr. psl. 21.

**Techniniai duomenys**

Darbinis slėgis:	max. 1 MPa
Rekomenduojamas slėgis:	0,1 – 0,5 MPa
Bandomasis slėgis:	1,6 MPa
(1 MPa = 10 barų = 147 PSI)	
Karšto vandens temperatūra:	max. 80 °C
Rekomenduojama karšto vandens temperatūra:	65 °C
Vandens pralaidumas:	ca. 58 l/min 0,3 MPa

**Techninis aptarnavimas**

Termostatams nereikia specialios priežiūros. Atbulinio vožtuvo apsauga privalo būti tikrinama reguliariai (mažiausiai kartą per metus pagal DIN 1988) pagal DIN EN1717 arba pagal galiojančias nacionalines arba regionines normas. Tuo pačiu būtina patikrinti filtra, kuris yra ant termoelemento sienelės (6.1). Pakeitus termoelementą (6), būtina patikrinti vandens temperatūrą ir nustatyti karšto vandens ribojimą (žr. temperatūros nustatymą). Pries reguliavimą patikrinkite, ar tiekiamas karštas vanduo ir kokia jo didžiausia temperatūra ištekėjimo vietoje.

Tam, kad būtų garantuotas tolygas temperatūros reguliavimas ir ilgas naudojimasis, būtina periodiškai temperatūros rankenėlę pasukti į karščiausios ir šalčiausios temperatūros padėtį.

Zajamčena funkcija od • naviše

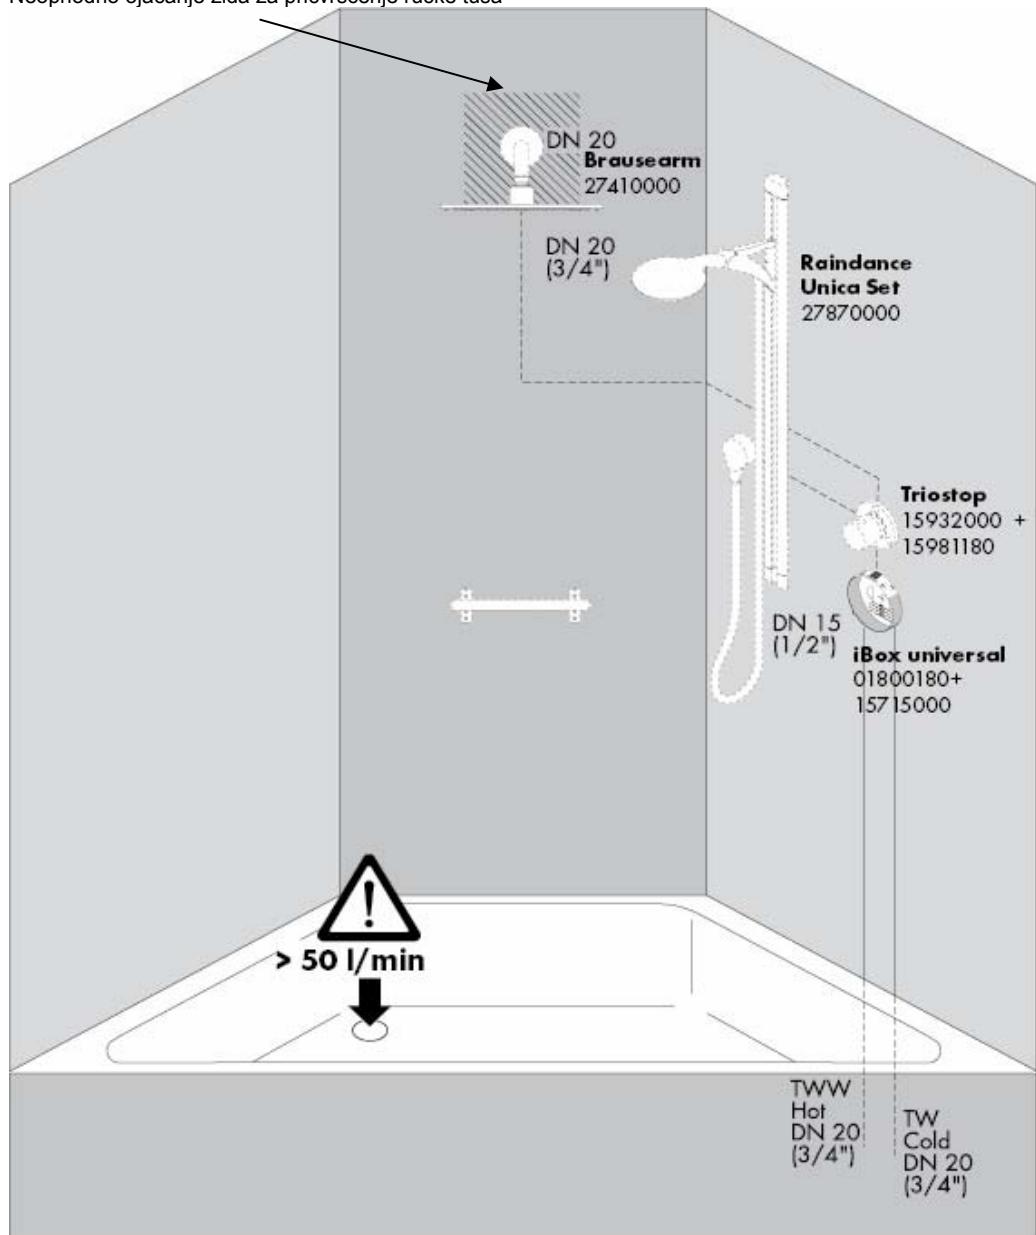

Neophodno ojačanje zida za pričvršćenje ručke tuša

Silikon (ne sadrži kiseline)

Zahvaljujući Safety funkciji može se podesiti željena maksimalna temperatura, npr. i 42 °C

#### Regulacija

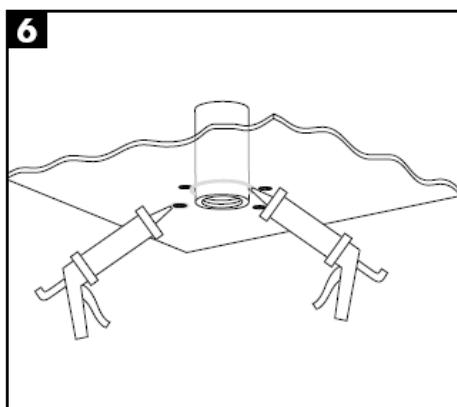

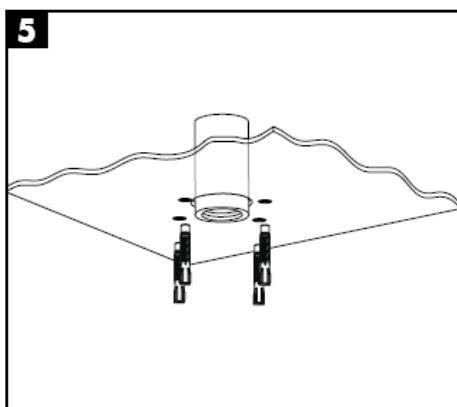

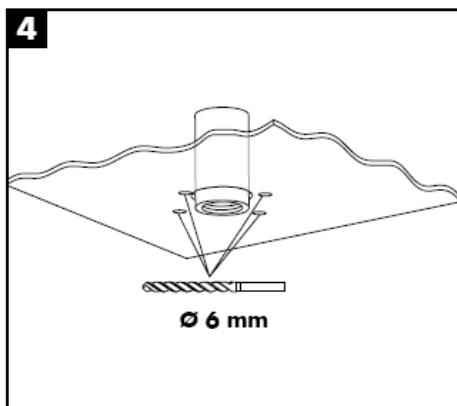

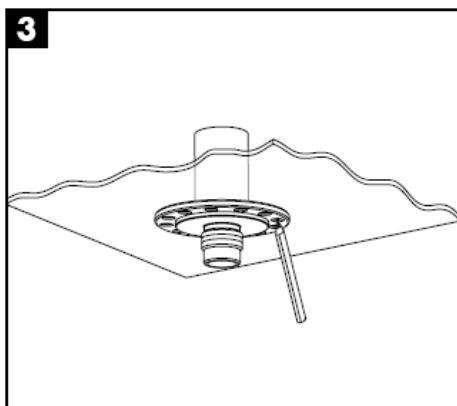

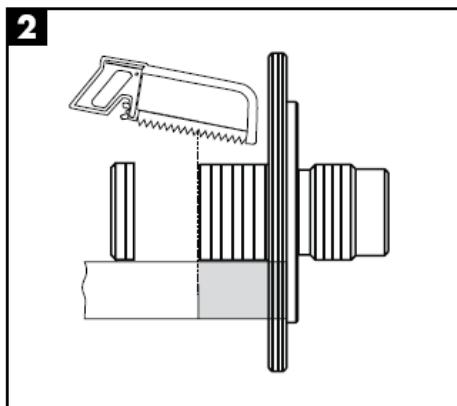

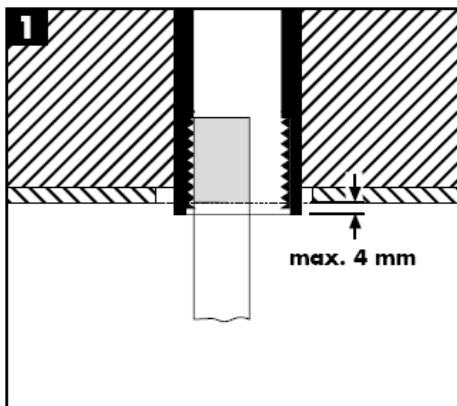

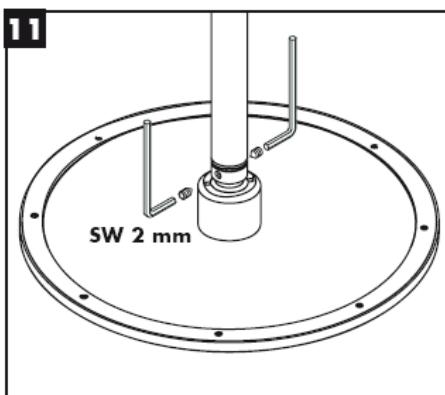

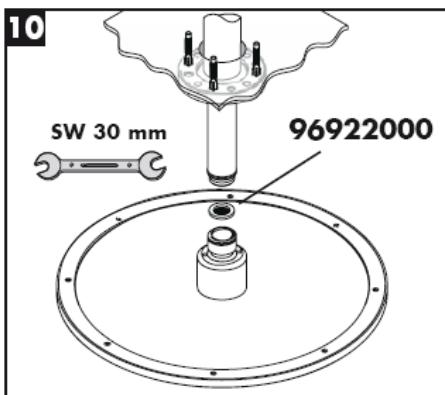

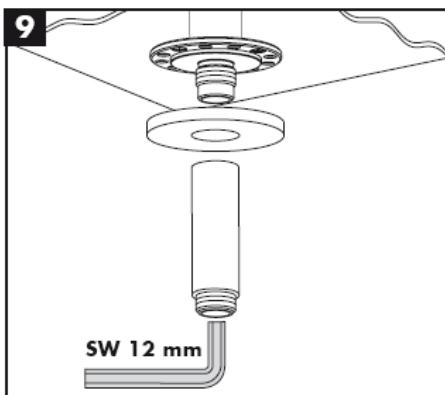

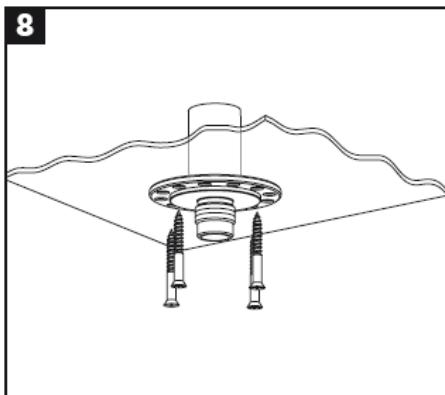

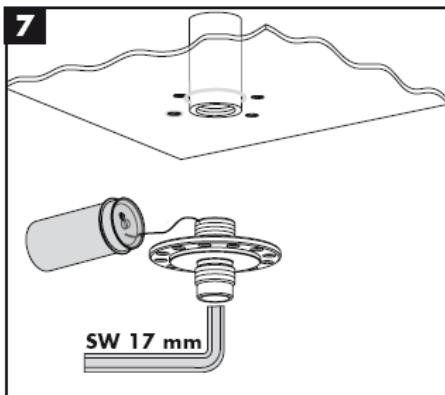

Tuš koji radi, zajedno sa nosačem tuša, težak je oko 10 kg. Zbog toga se smije koristiti samo materijal prikladan za pričvršćenje na postojeći zid! Priloženi vijci i moždanici prikladni su samo za masivne zidove.

Smijete koristiti jedino materijal prikladan za pričvršćivanje na vanjski zid. Priloženi vijci i tipla prikladni su samo za masivne zidove.

Potreban je optimalan protok vode

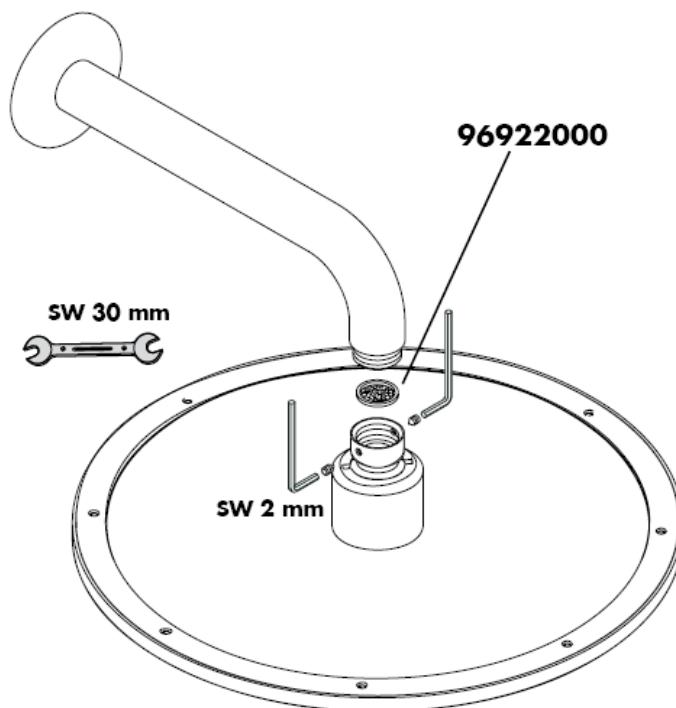

Optimalna funkcija zajamčena je samo u kombinaciji sa Hansgrohe High Flow termostatima

---

Filter potrebno je ugraditi kako bi se regulirao protok vode i smanjio dotok prljavštine. Za eventualna oštećenja uzrokovana prljavštinom proizvođač Hansgrohe nije odgovoran.

**Sastavljanje**

**Pažnja!** Cijevi moraju biti postavljene, isprane i testirane prema važećim normama!

**Regulacija**

Korekcija je potrebna ukoliko temperatura odstupa od one podešene na termostatu. Pritom pripazite na slijedeće: Okrenite skalu sve dok ne počne izlaziti voda temperature 38 °C. Odvrnite vijak ručice, povucite ručicu i okrenite je do pozicije 38°. Zatim ponovno nataknite ručicu i pričvrstite vijak (vidi stranu 22)

**Ograničenje temperature**

Temperaturu možete ograničiti na 38 °C uz pomoć sigurnosnog sustava (zaštita od pare). Ukoliko želite temperaturu višu od 38 °C, pritiskom na gumb deaktivirate sigurnosni sustav

**Safety Funkcija**

Zahvaljujući Safety funkciji može se podešiti željena maksimalna temperatura, npr. i 42 °C pogledaj stranicu 21.

**Tehnički podatci**

Najveći dopušteni tlak:	max. 1 MPa
Preporučeni tlak:	0,1 – 0,5 MPa
Probni tlak:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Temperatura vruće vode:	max. 80° C
Preporučena temperatura vruće vode:	65° C
Protok vode:	ca. 58 l/min 0,3 MPa

**Održavanje**

Nije potrebno posebno održavanje termostata. Ispravnost nepovratnog ventila mora se redovito provjeravati prema standardu DIN EN 1717 i u skladu sa važećim propisima (najmanje jednom godišnje). Također ispitajte ispravnost filtera za prljavštinu koji se nalazi na MTC regulacijskoj jedinici. (6.1) Nakon instalacije MTC regulacijske jedinice (6) obavezno ispitajte toplinu vode na slavini kao što je opisano pod točkom "Regulacija". No prije toga svakako ispitajte je li uključen sustav za opskrbu toplom vodom i izlazi li na probnom mjestu voda s maksimalnom temperaturom u odnosu na dispoziciju

Kako bi se olakšala prohodnost i produljio vijek trajanja regulacijske jedinice, potrebno je s vremena na vrijeme podešiti termostat iz položaja maksimalno tople u položaj maksimalno hladne vode.

**Rezervni djelovi** pogledaj stranicu 3

Duş kolu sabitlemesi için duvar takviyesi gereklidir

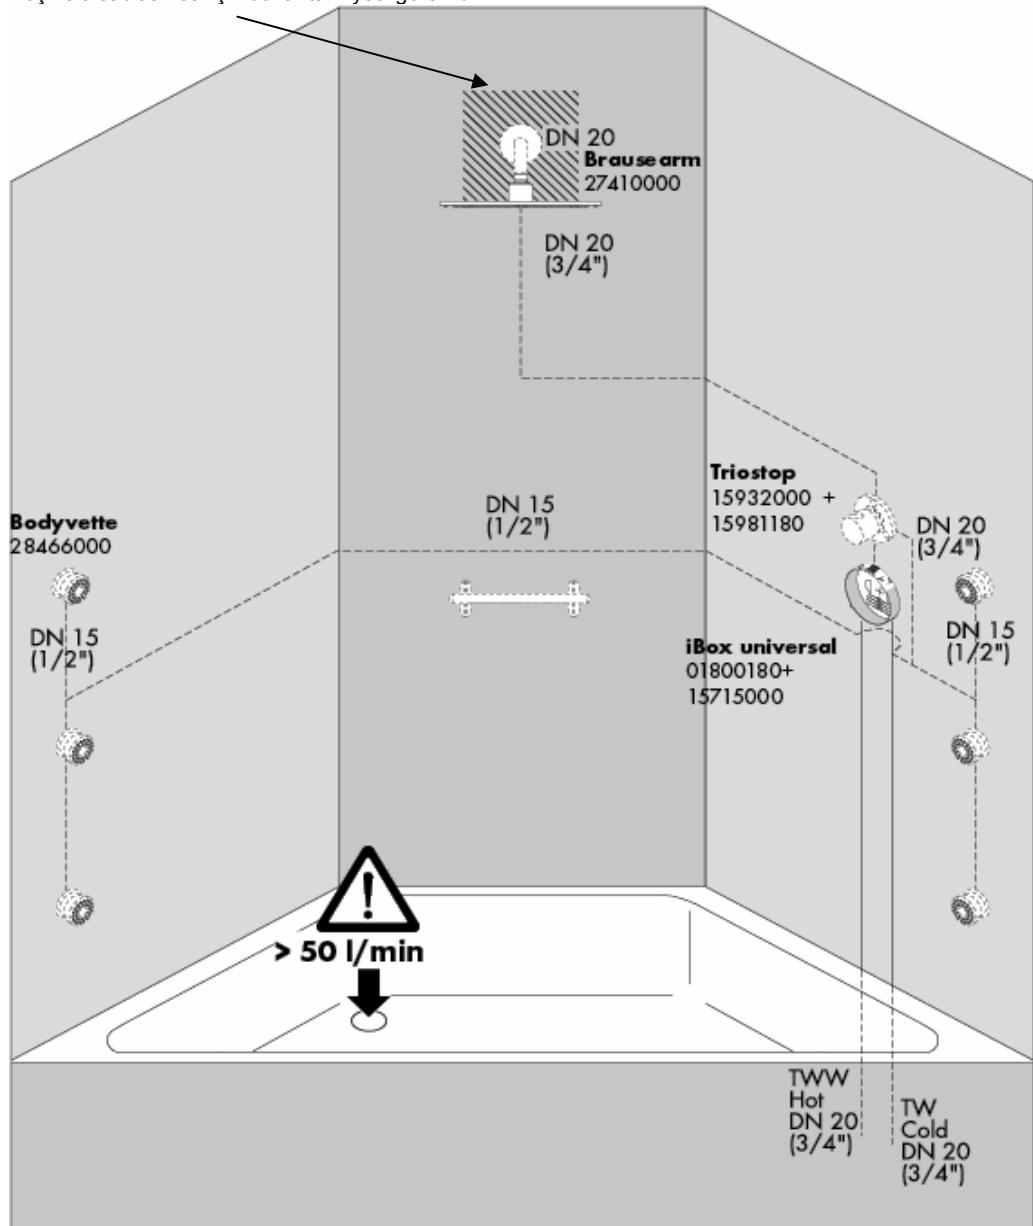

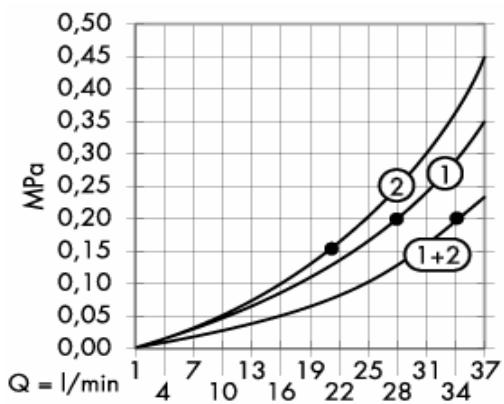

•'den itibaren fonksiyon garanti edilmiştir.

Silikon (asetik asit içermeyen)

Emniyet fonksiyonu sayesinde, istenen maksimum sıcaklık Örn; maks. 42 °C önceden ayarlanabilir.

#### Ayarlama

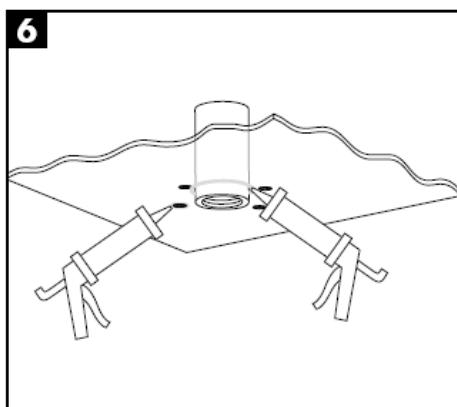

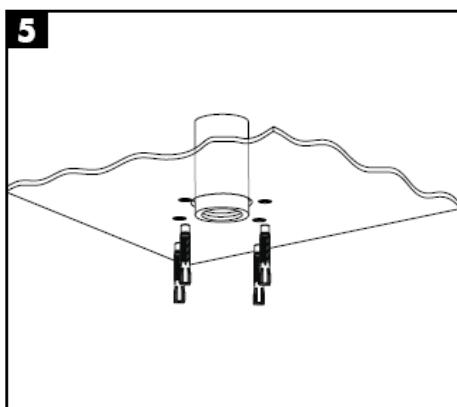

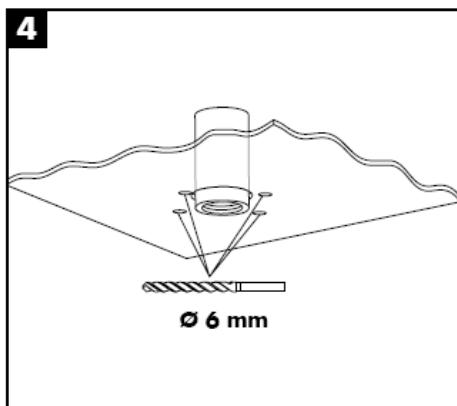

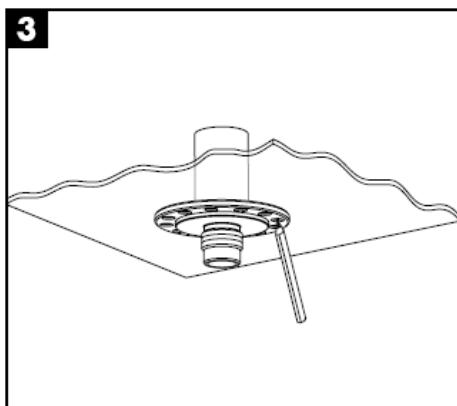

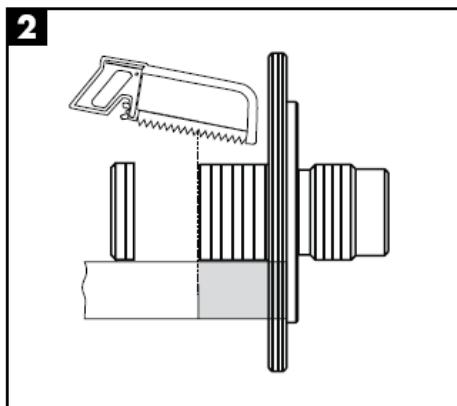

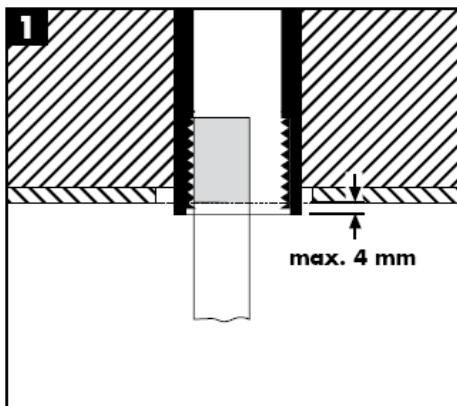

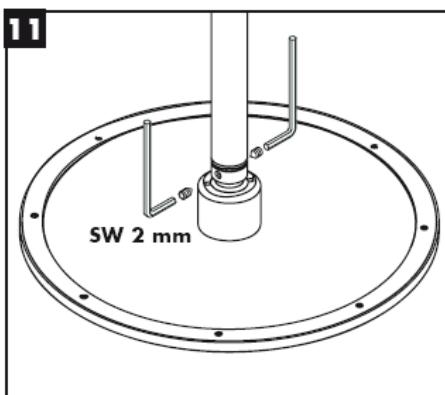

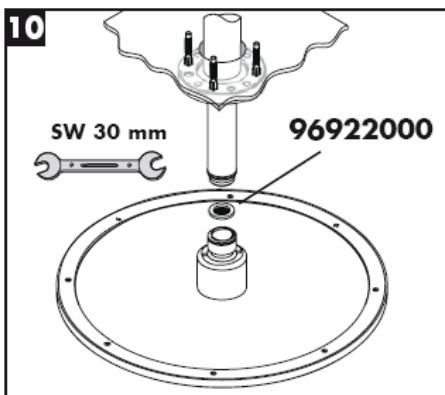

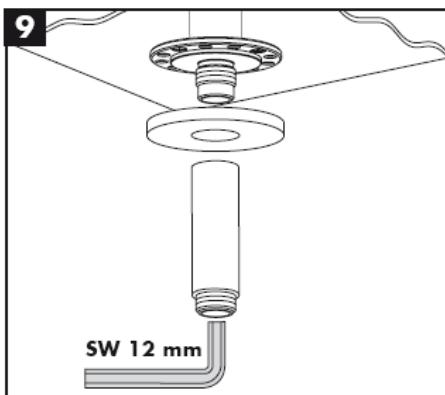

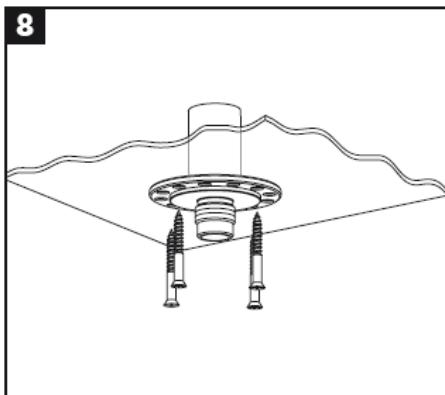

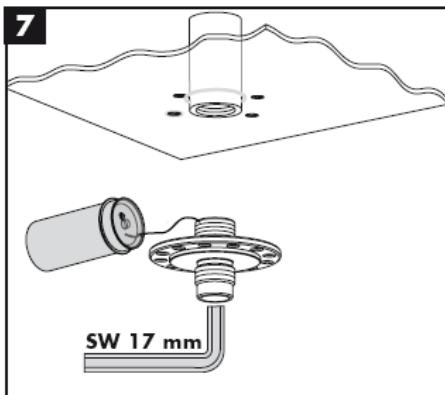

Su püskürtücü çalışıyorsa, su püskürtücü koluyla birlikte yakl. 10 kilo ağırlığındadır. Bu nedenle yalnızca duvar için uygun olan sabitleme malzemesi kullanılmalıdır! Birlikte verilen vida ve dübeller yalnızca masif duvarlar içindir.

Sadece duvarlar için uygun olan sabitleme malzemesi kullanılmalıdır! Ekteki civatalar ve dübeller sadece masif duvarlar içindir.

Çıkış kapasitesi yeterli miktarda boyutlandırılmış olmalıdır.

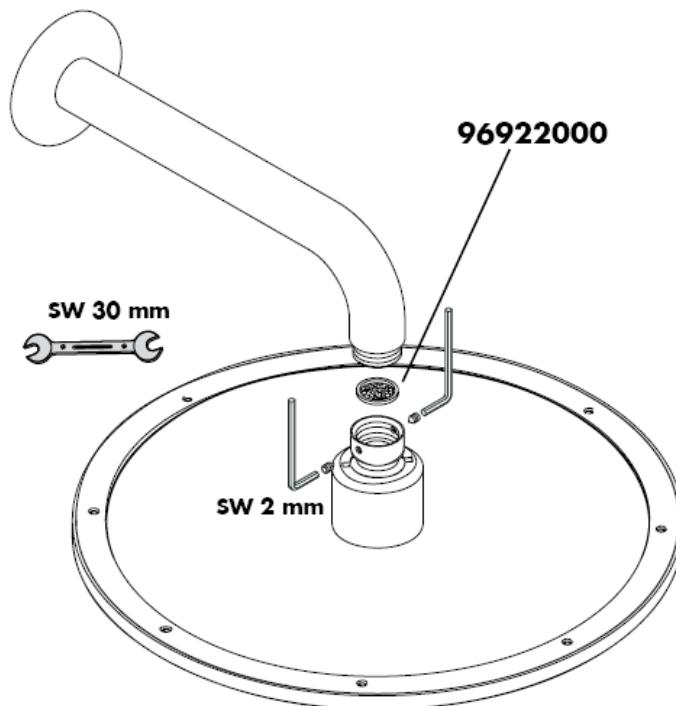

Optimum fonksiyon sadece Hansgrohe High Flow termostatları ile bağlantılı olarak garanti edilir.

---

Eli duşu kafasına eklenmiş olan süzgeç contası, boru şebekesinden sızan kirlerin önüne geçmek için, yerine monte edilmelidir. İçeri sızan bu kirler duşun fonksiyonunu sekteleyebilir ve/veya duşun fonksiyon parçaları üzerinde hasarlara sebep olabilir, bu yüzden meydana gelen hasarlardan Hansgrohe sorumlu tutulamaz.

**Montajı**

**Önemli!** Batarya geçerli normlara göre monte edilmeli, yılanmalı ve kontrol edilmelidir!

**Ayarlama**

Alma noktasında ölçülen sıcaklık termostatta ayarlanan sıcaklıktan farklısa, bir düzeltme gereklidir. Bu sırada şunlara dikkat edilmelidir: Alma noktasından 38 °C su çıkışına kadar ölçekli kumanda kolunu döndürün. Kumanda kolu vidasını gevşetin, kumanda kolunu geri çekin ve 38 °C konumuna kadar döndürün. Kumanda kolunu takın ve kumanda kolu vidasını sıkın (Bkz. Sayfa 22).

**Sıcaklık sınırlama**

Sıcaklık aralığı, emniyet kilidi ile 38 °C de sınırları (haşlanma koruması). Daha yüksek bir sıcaklık istenirse, emniyet düğmesine basarak 38 engeli açılabilir.

**Safety Function**

Emniyet fonksiyonu sayesinde, istenen maksimum sıcaklık Örn; maks. 42 °C önceden ayarlanabilir. Bakınız sayfa 21.

**Teknik bilgiler**

İşletme basıncı:	max. 1 MPa
Tavsiye edilen işletme basıncı:	0,1 – 0,5 MPa
Kontrol basıncı:	1,6 MPa (1 MPa = 10 bar = 147 PSI)
Sıcak su sıcaklığı:	max. 80 °C
Tavsiye edilen su ıslısı:	65 °C
Debisi :	ca. 58 l/min 0,3 MPa

**Bakım**

Termostatlar özel bir bakım gerektirmez DIN EN 1717 ve ulusal standartlar doğrultusunda Çek valfler düzenli olarak kontrol edilmelidir. (en az yılda bir kez) Bu fırsatı kullanarak, MTC ayar ünitesinde (6.1) bulunan kir tutucuları da kontrol edin. MTC ayar ünitesini (6) taktiktan sonra, "Ayarlama" maddesinde tarif edildiği gibi çıkış sıcaklığını da mutlaka kontrol edin. Daha önce, müyülü noktasında sıcak su beslemesi ve maksimum sıcak su sıcaklığının mevcut olup olmadığını da mutlaka kontrol edin.

Ayar ünitesinin kolay hareket etmesini sağlamak için, termostat belirli aralıklarla tamamen sıcak ve soğuk konuma getirilmelidir.

Pentru fixarea brațului dușului este necesară consolidarea peretelui

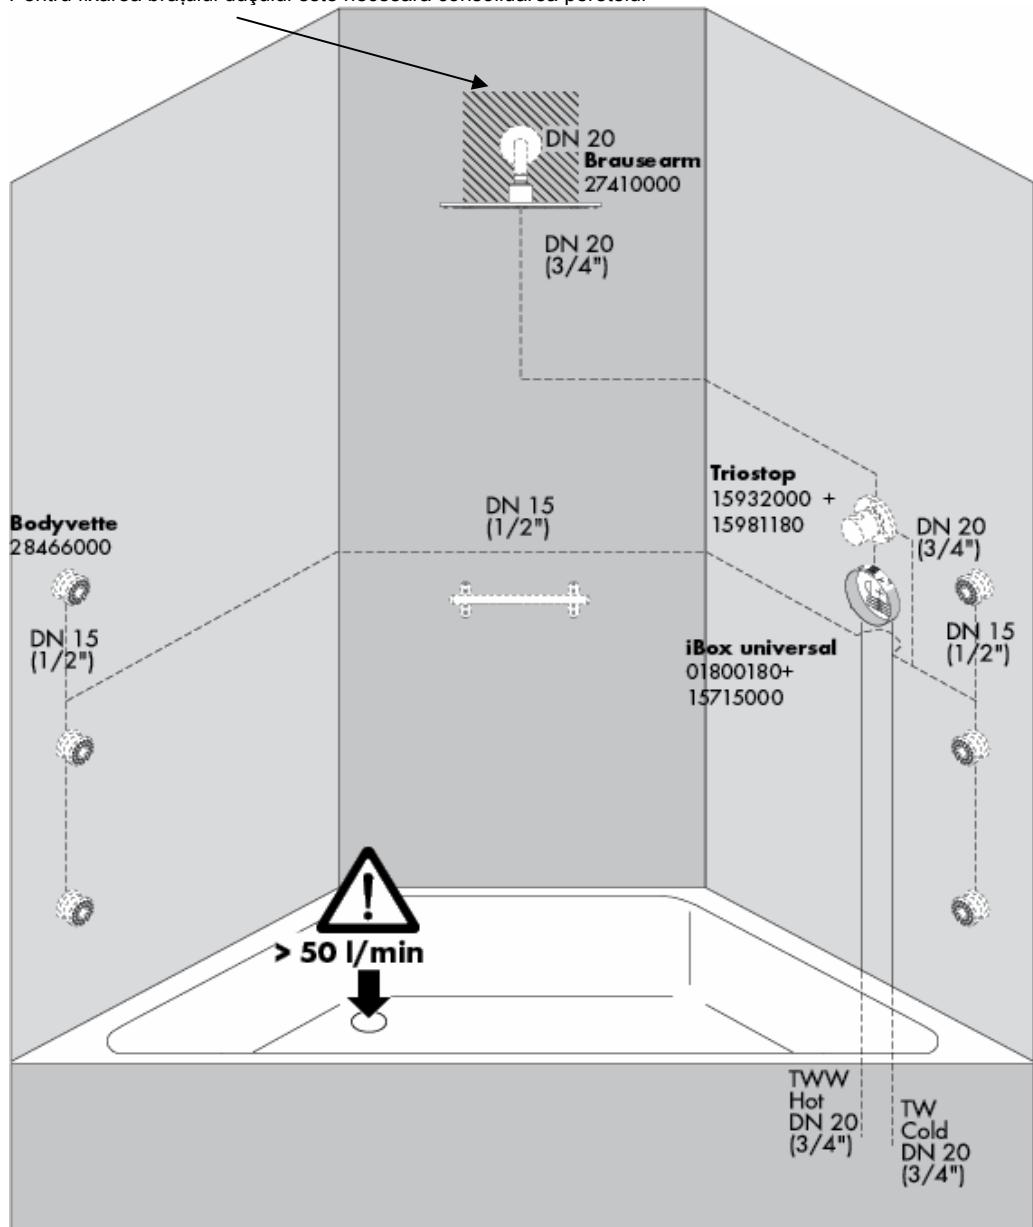

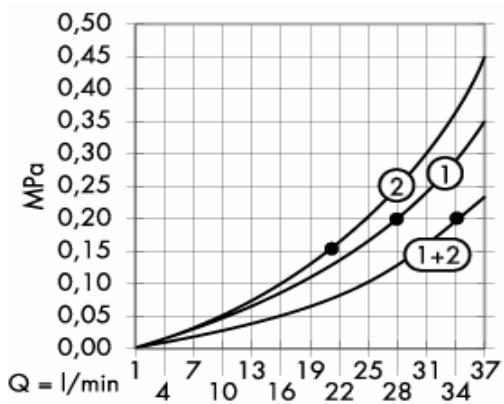

Începând de la • funcționarea este garantată.

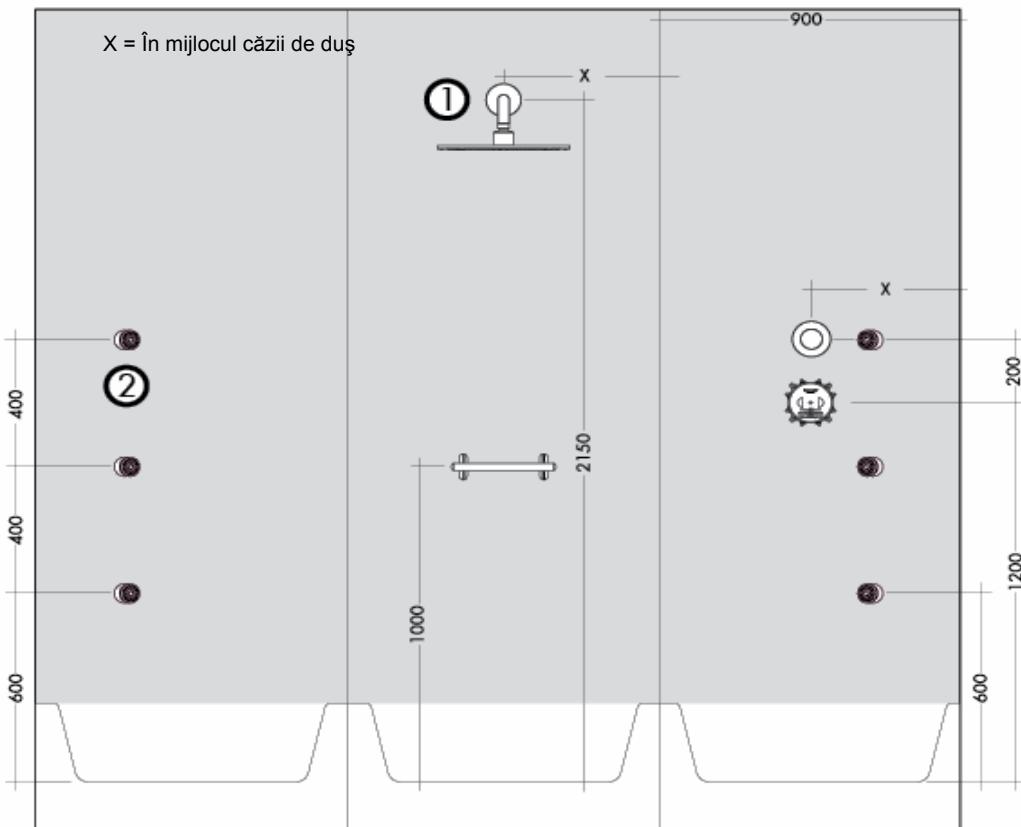

Pentru fixarea brațului dușului este necesară consolidarea peretelui

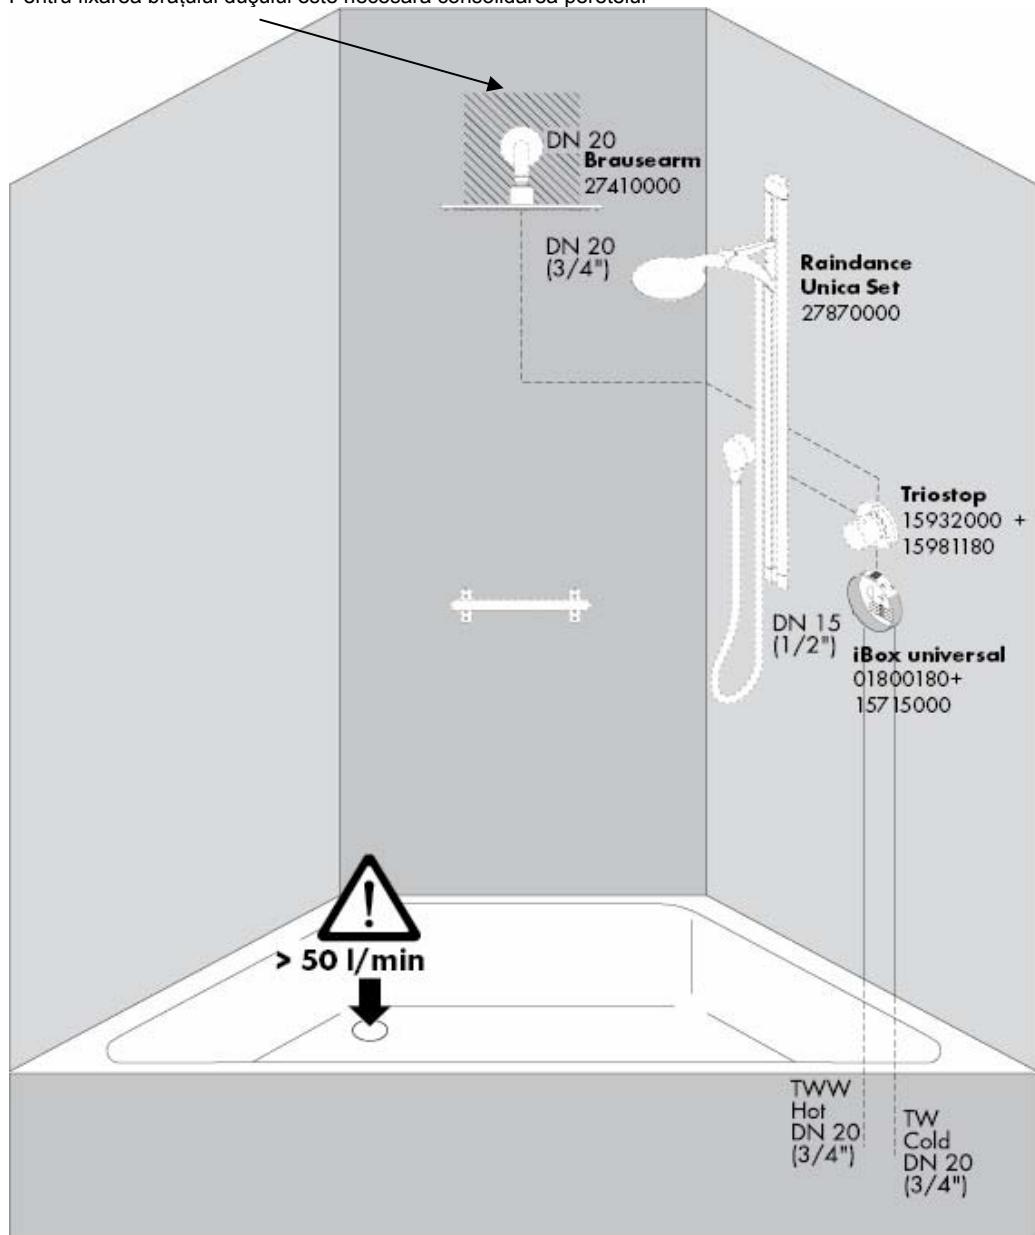

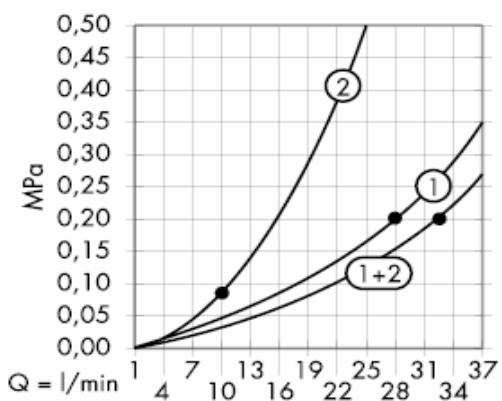

Începând de la • funcționarea este garantată.

Silicon (fără acid acetic!)

Datorită funcției de siguranță puteți preregla temperatura maximă, de ex. 42 °C.

Reglare

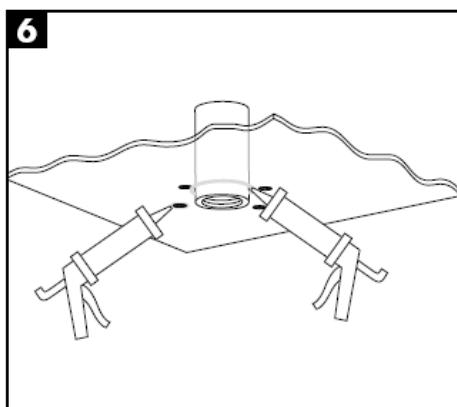

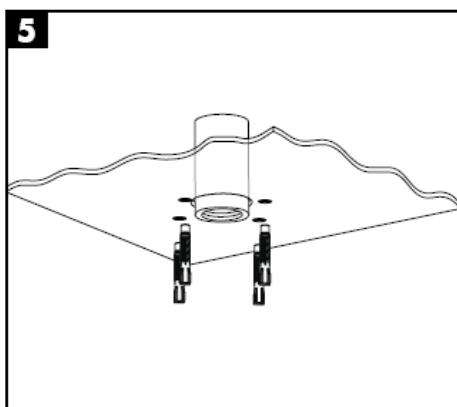

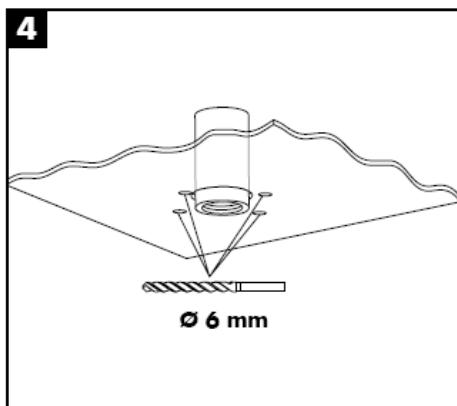

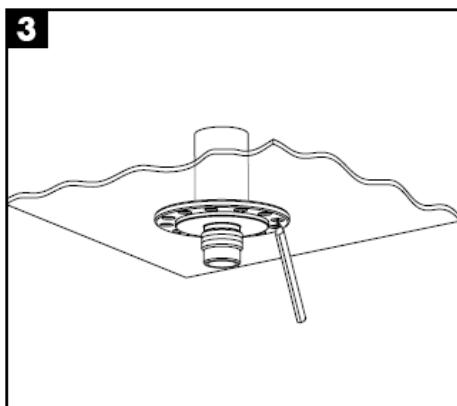

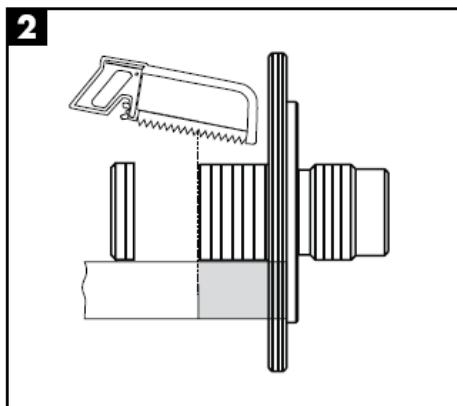

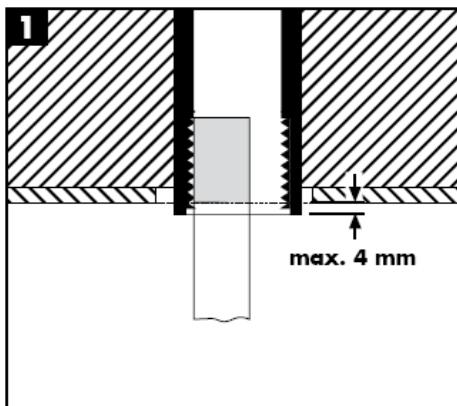

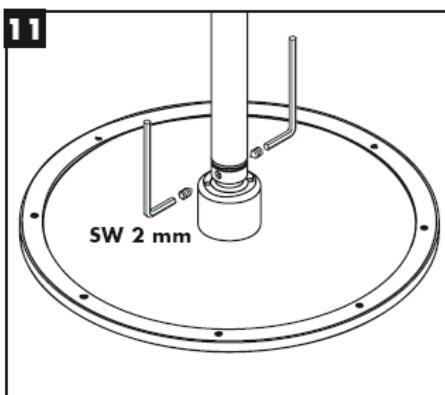

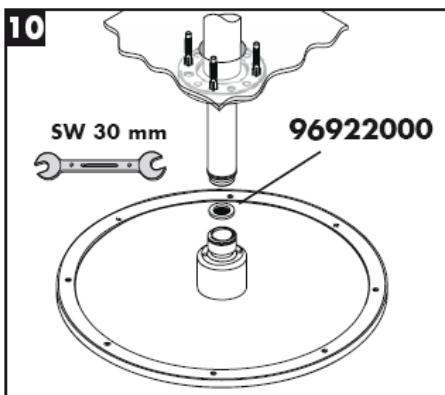

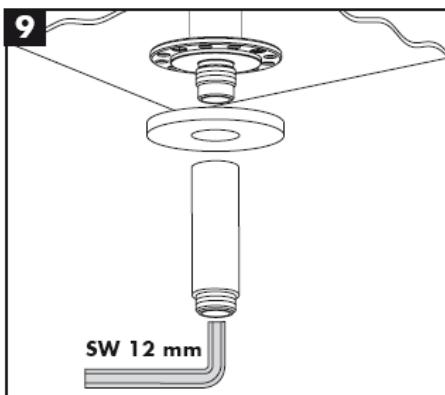

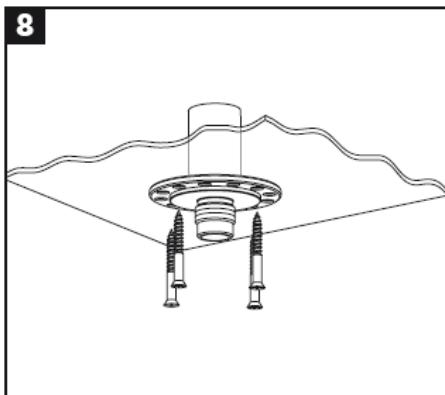

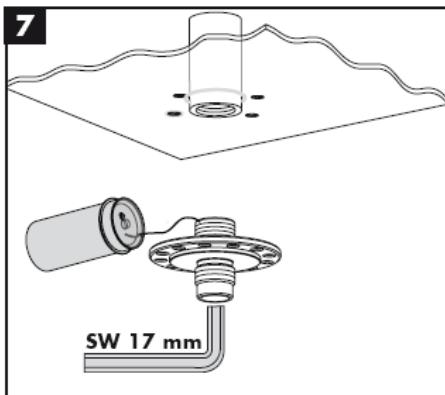

În timpul funcționării dușului, acesta atinge împreună cu bar de duș o greutate de cca. 10 kg. De aceea utilizați numai materiale de fixare potrivite pentru zidărie! Șuruburile și diblurile anexate sunt potrivite pentru zidării masive.

Utilizați numai materiale potrivite pentru lucrări de zidărie! Șuruburile și diblurile livrate sunt potrivite pentru zidării masive.

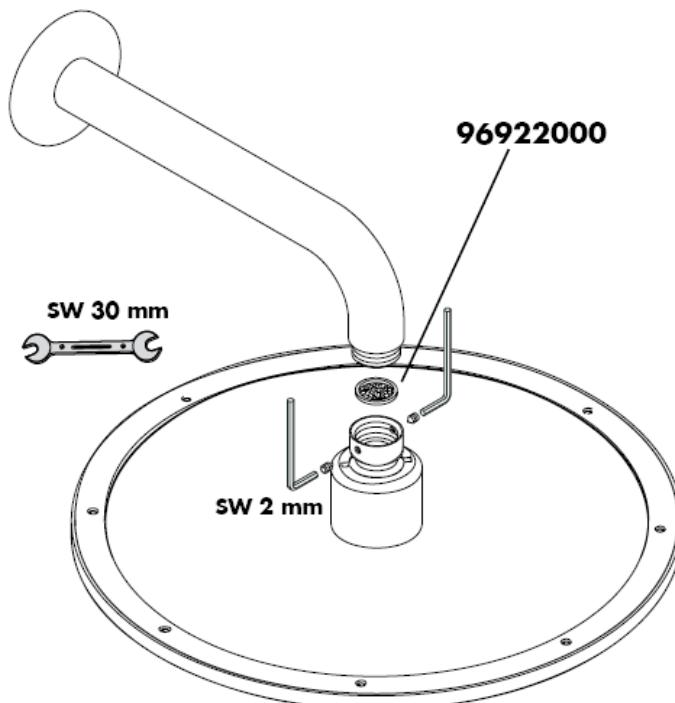

Debitul de golire trebuie să fie suficient de mare.

Funcționarea optimă este garantată numai conectat la termostate High Flow marca Hansgrohe.

Montați garnitura de filtru livrată împreună cu capătul de duș de mână pentru evitarea pătrunderii impurităților din rețeaua de alimentare. Impuritățile pătrunse pot influența funcționarea aparatului și/sau provoca deteriorarea capătului de duș. Garanția nu acoperă aceste daune.

**Montare**

**Atenție!** Bateria trebuie montată, clătită și verificată conform normelor în vigoare.

**Reglare**

Trebuie efectuată o corecție dacă există diferență între temperatura măsurată la golire și temperatura la termostat. Trebuie să aveți grijă să rotiți maneta cu gradăție până când la golire obțineți apă cu o temperatură de 38 °C. Desfaceți șuruburile manetei, trageți înapoi maneta și rotiți-l în poziția de 38 °C. Puneți înapoi maneta și strângeți șuruburile manetei (vezi pag. 22).

**Limitarea temperaturii**

Domeniul de temperatură este limitat la 38 °C din motive de siguranță (protectie la opărire).

Dacă dorîți să setați o temperatură mai ridicată, apăsați butonul de siguranță pentru depășirea limitei de 38 °C.

**Funcția de siguranță**

Datorită funcției de siguranță puteți preregla temperatura maximă, de ex. 42 °C. vezi pag. 21.

**Date tehnice**

Presiune de funcționare: max. 1 MPa

Presiune de funcționare recomandată: 0,1 – 0,5 MPa

Presiune de verificare: 1,6 MPa  
(1 MPa = 10 bar = 147 PSI)

Temperatura apei calde: max. 80 °C

Temperatura recomandată a apei calde: 65 °C

Debit de apă: ca. 58 l/min 0,3 MPa

**Întreținere**

Termostatele nu necesită întreținere specială. Supapele de reținere trebuie verificate regulat conform DIN EN 1717 și standardele naționale sau regionale (anual conform DIN 1988).

Verificați cu această ocazie și sita pentru impurități aflată pe unitatea de reglare MTC (6.1). După montarea unității de reglare MTC (6) verificați temperatura de ieșire conform celor descrise în cap. "Reglare". Verificați neapărat în prealabil, dacă s-a pornit alimentarea cu apă caldă și apă are temperatura maximă la intrare.

Pentru garantarea mișcării ușoare a unității de reglare, vă recomandăm să setați termostatul pe pozițiile limită cald și rece.

**Piese de schimb** vezi pag. 3

Σιλικόνη (δίχως οξικό οξύ!)

Χάρη στη λειτουργία ασφαλείας Safety Function, είναι δυνατή η προρρύθμιση της επιθυμητής μέγιστης θερμοκρασίας (π.χ. 42 °C).

#### Ρύθμιση

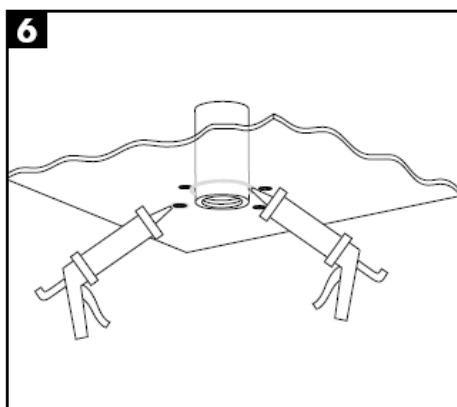

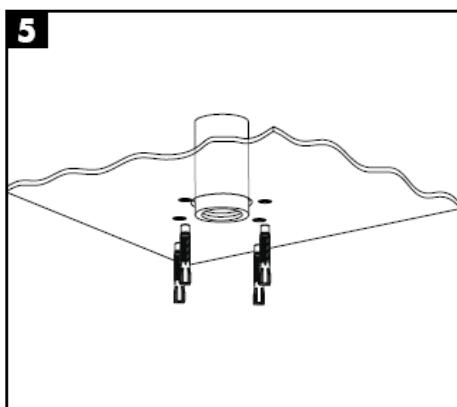

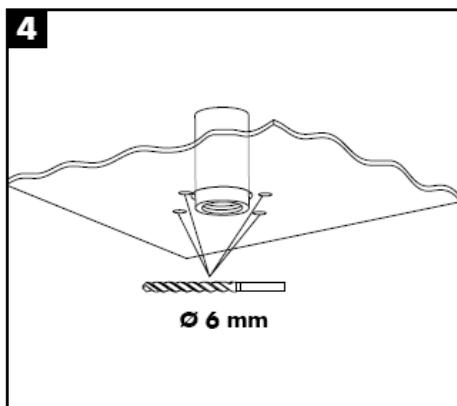

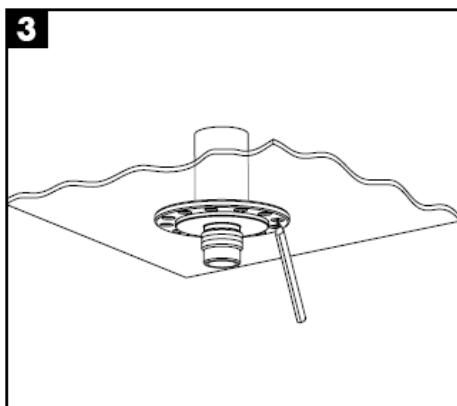

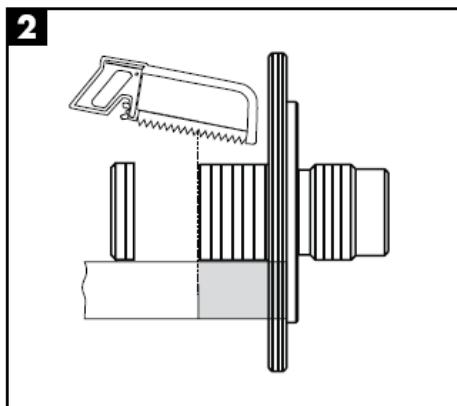

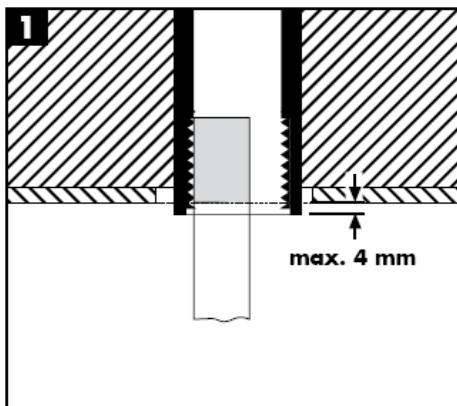

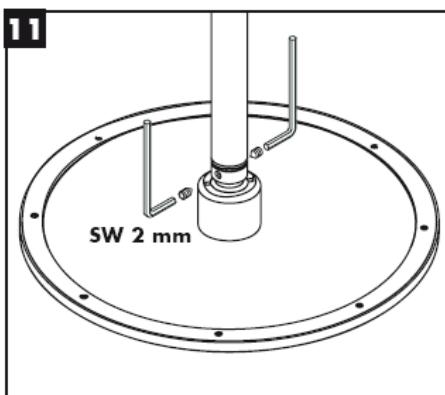

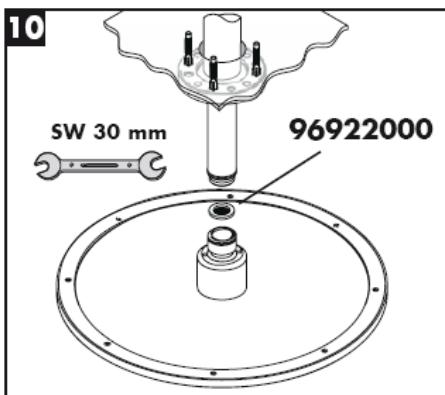

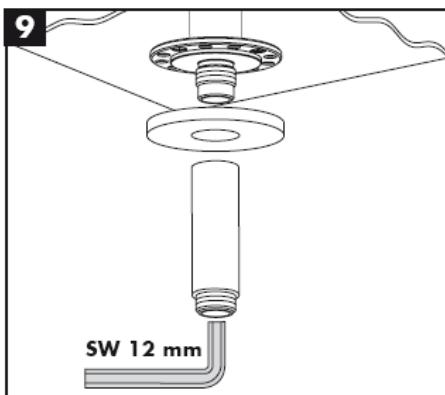

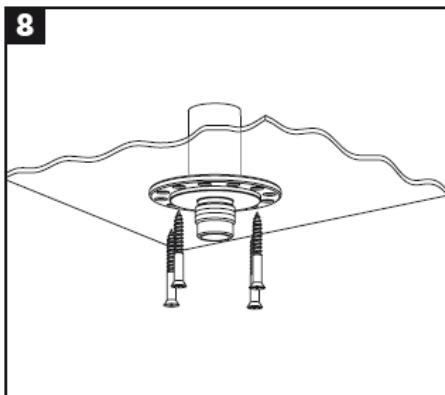

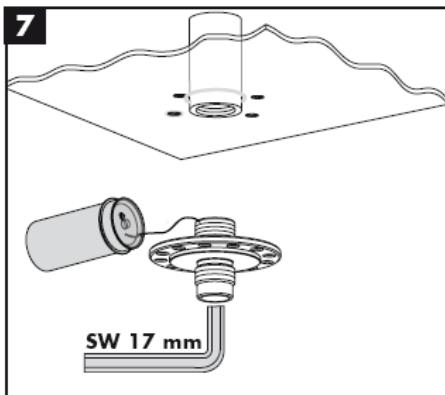

Όταν το ντους λειτουργεί, μαζί με τον βραχίονα έχει βάρος περίπου 10 kg. Για αυτό τον λόγο επιτρέπεται να χρησιμοποιείται υλικό στερέωσης μόνο που ενδείκνυται για την τοιχοποιία! Οι παραδιδόμενες βίδες και ούπατα ενδείκνυνται μόνο για μασίφ τοιχοποιία.

Επιτρέπεται η χρήση μόνο υλικών σταθεροποίησης που είναι κατάλληλα για την τοιχοποιία! Οι συνημμένες βίδες και στυλίσκοι είναι κατάλληλοι μόνο για συμπαγή τοιχοποιία.

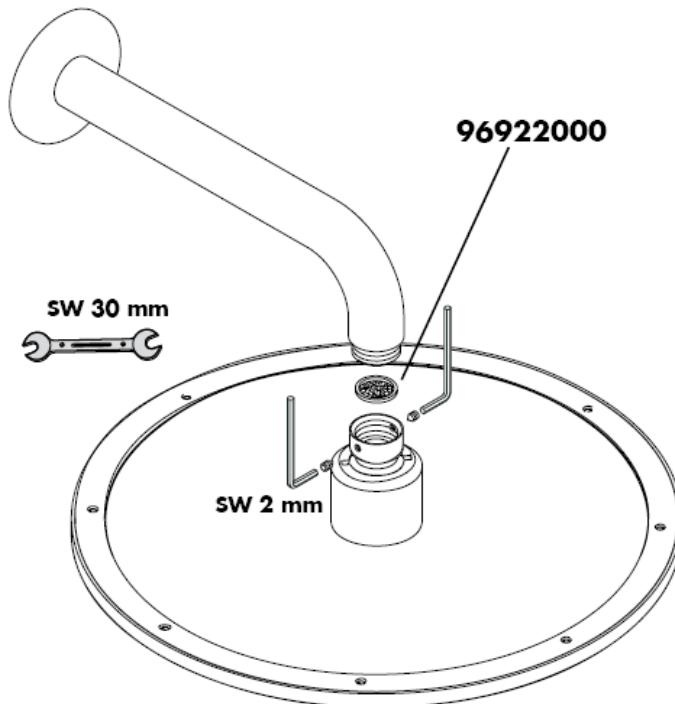

Η κατανάλωση νερού πρέπει να έχει επαρκείς διαστάσεις.

Η βέλτιστη λειτουργία διασφαλίζεται μόνο σε συνδυασμό τους θερμοστάτες High Flow της Hansgrohe.

Πρέπει να εγκατασταθεί το παρέμβυσμα φίλτρου που συνοδεύει τον καταιονιστήρα κατά τέτοιο τρόπο, ώστε να αποφεύγονται ρύποι που προέρχονται από το δίκτυο ύδρευσης. Οι ρύποι από το δίκτυο ύδρευσης μπορούν να επηρεάσουν αρνητικά και/ ή να προξενήσουν ζημιά στα λειτουργικά τμήματα του καταιονιστήρα (ντους). Τέτοιου είδους ζημιές δεν καλύπτονται από την εγγύηση Hansgrohe.

## Συναρμολόγηση

**Προσοχή!** Η κεντρική βάνα πρέπει να τοποθετηθεί, να πλυθεί και να ελεγχθεί με βάση τους ισχύοντες κανόνες υδραυλικής τέχνης!

### Ρύθμιση

Είναι απαραίτητη μία διόρθωση, όταν, στο σημείο λήψης, η μετρούμενη θερμοκρασία αποκλίνει από τη ρυθμισμένη στο θερμοστάτη θερμοκρασία. Θα πρέπει να δοθεί προσοχή στα εξής: Περιστρέψτε τη λαβή με την κλίμακα, μέχρις ότου να εξέρχεται νερό στο σημείο λήψης σε θερμοκρασία 38 C. Χαλαρώστε τη βίδα της λαβής, τραβήξτε τη λαβή προς τα πίσω, και περιστρέψτε μέχρι τη θέση των 38 C. Εξάγετε τη λαβή και σφίξτε γερά τη βίδα της λαβής (βλ. σελ. 22).

### Διάταξη περιορισμού θερμοκρασίας

Το πεδίο της θερμοκρασίας περιορίζεται από τη διάταξη φραγής ασφαλείας στους 38 (προστασία από εγκαύματα). Εάν είναι επιθυμητή μία μεγαλύτερη θερμοκρασία, τότε μπορεί να υπερβληθεί η φραγή των 38 με το πάτημα του πλήκτρου ασφαλείας.

### Safety Function (Λειτουργία ασφαλείας)

Χάρη στη λειτουργία ασφαλείας Safety Function, είναι δυνατή η προρρούμιση της επιθυμητής μέγιστης θερμοκρασίας (π.χ. 42 C). βλ. Σελίδα 21.

### Τεχνικά Χαρακτηριστικά

Λειτουργία πίεσης:	max. 1 MPa
Συνιστώμενη λειτουργία πίεσης:	0,1 – 0,5 MPa
Πίεση ελέγχου:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Θερμοκρασία ζεστού νερού:	max. 80° C
Συνιστώμενη θερμοκρασία ζεστού νερού:	65° C
Κατανάλωση νερού:	ca. 58 l/min 0,3 MPa

## Συντήρηση

Οι θερμοστάτες δεν χρειάζονται ειδική συντήρηση. Οι βαλβίδες αντεπιστροφής πρέπει να ελέγχονται τακτικά ως προς τη λειτουργία τους, σύμφωνα με τις οδηγίες DIN EN 1717, σε σχέση με τους ισχύοντες εθνικούς ή τοπικούς κανόνες (το ελάχιστο μια φορά το χρόνο, σύμφωνα με το πρότυπο DIN 1988) Με την ευκαιρία αυτή, ελέγχετε τους συλλέκτες ακαθαρσιών, οι οποίοι βρίσκονται επίπλως στη μονάδα ρύθμισης MTC (6.1). Μετά τη συναρμολόγηση της μονάδας ρύθμισης MTC (6), να ελέγχετε οπωσδήποτε τη θερμοκρασία εκροής, όπως περιγράφεται στην ενότητα "Ρύθμιση". Ελέγχετε οπωσδήποτε προκαταβολικά, εάν η παροχή νερού είναι ενεργοποιημένη και εάν η θερμοκρασία του νερού στο σημείο λήψης έχει τη μέγιστη τιμή της.

Για να διασφαλίσετε την καλή λειτουργία της μονάδας ρύθμισης, θα πρέπει να ρυθμίζετε το θερμοστάτη από καιρού εις καιρόν σε εντελώς ζεστό ή εντελώς κρύο.

Potrebeno je ojačanje stene za pritrditev ročke za prho

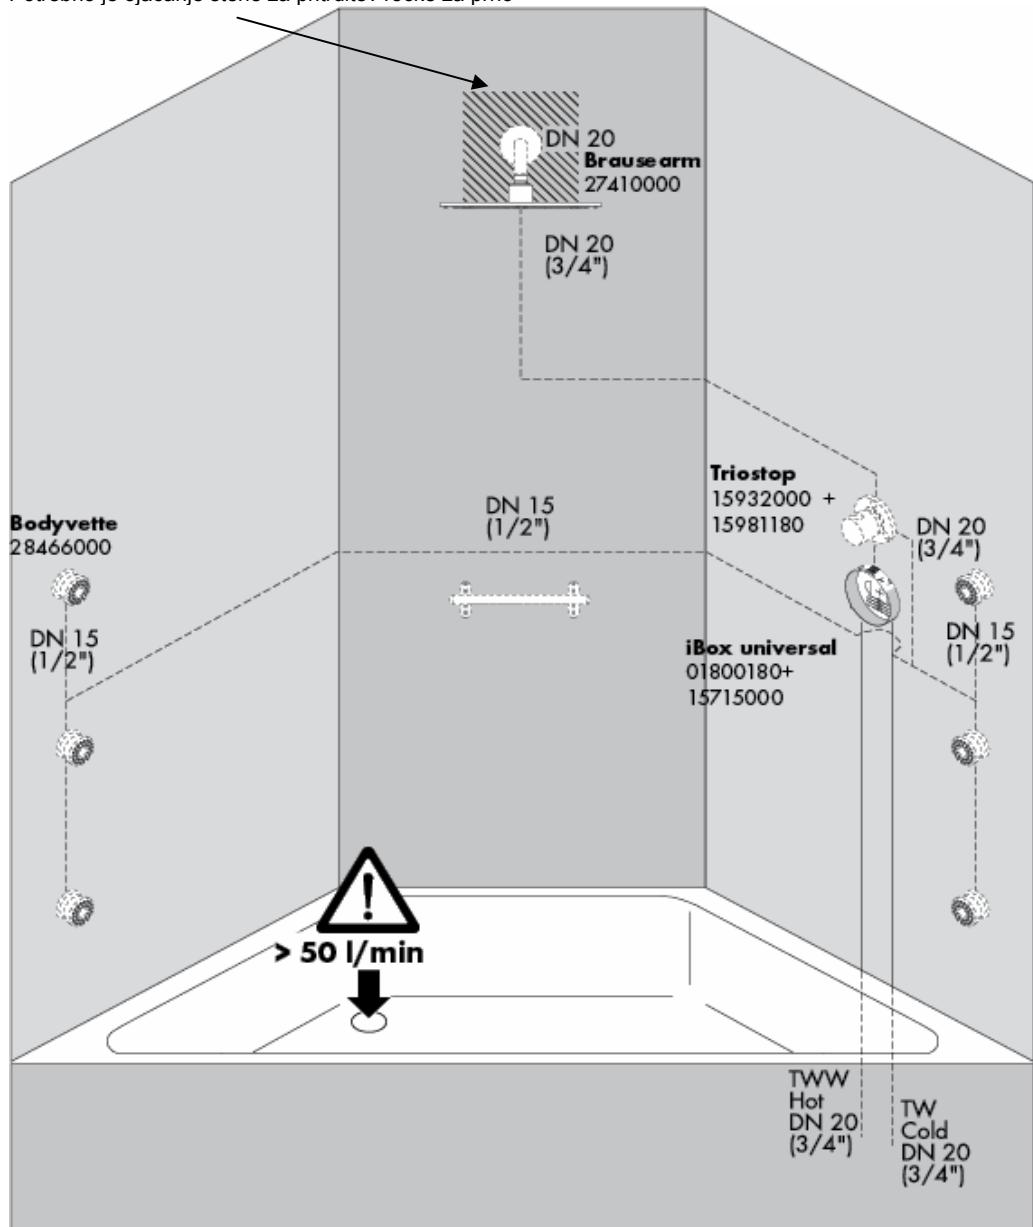

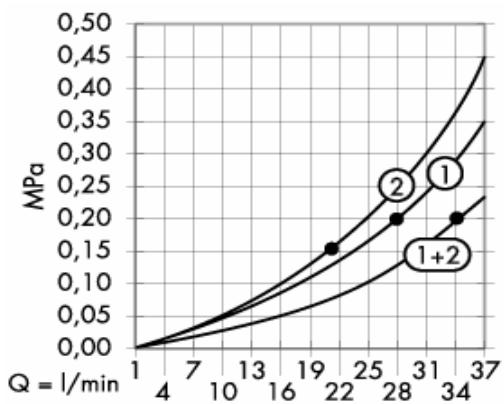

Od • je delovanje zagotovljeno.

Silikon (brez acetne kisline)

Varnostna funkcija omogoča, da vnaprej nastavimo najvišjo želeno temperaturo npr. 42 °C.

Nastavitev

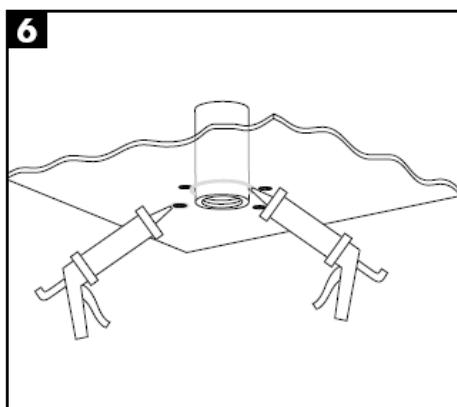

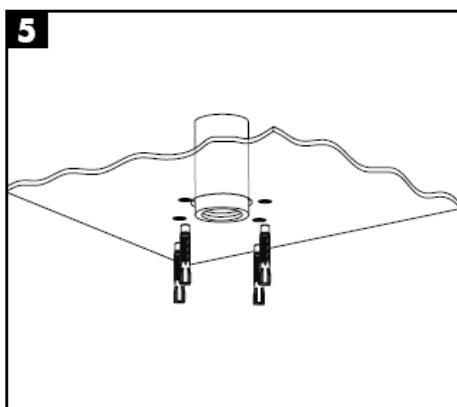

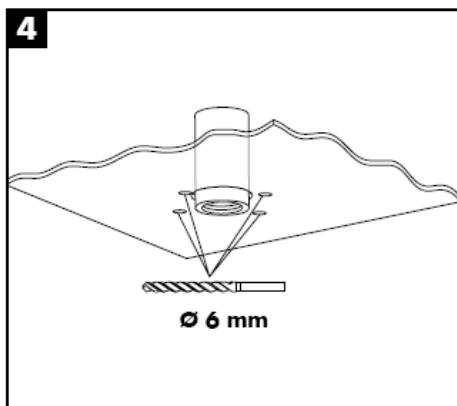

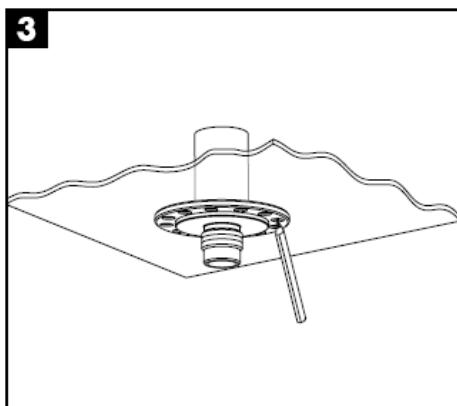

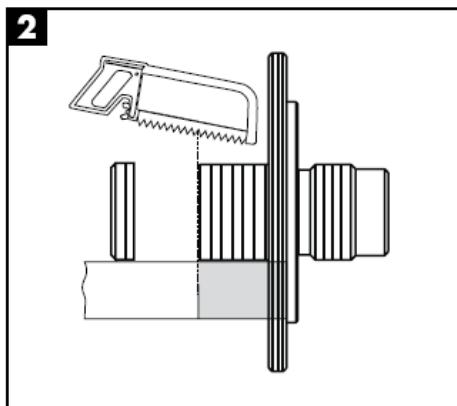

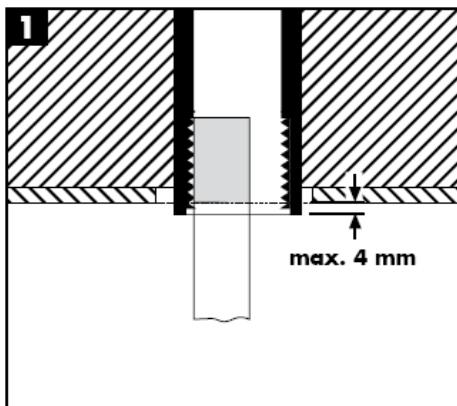

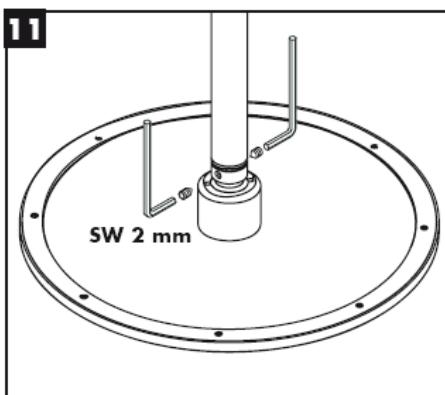

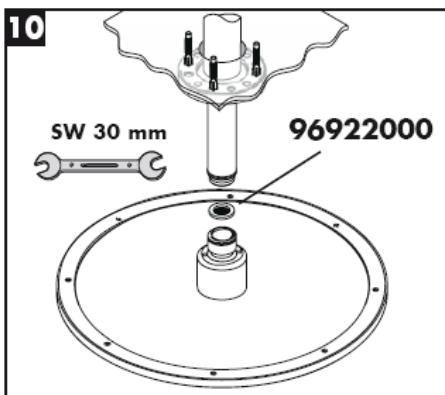

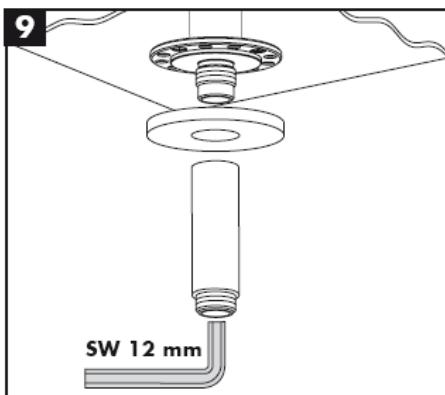

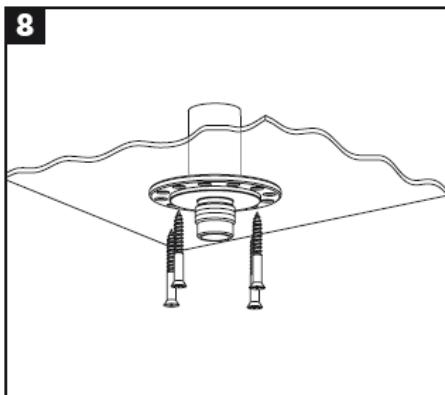

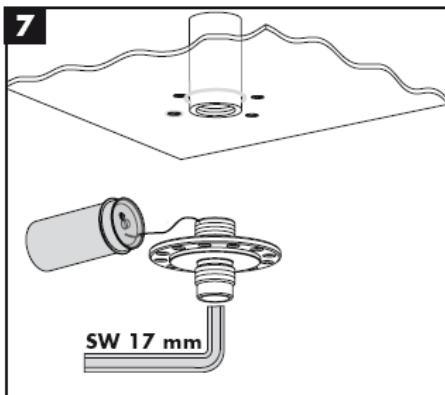

Ko je prha v uporabi, tehta skupaj z nosilcem ca. 10 kg. Zato je dovoljena le uporaba pritrditvenega materiala, ki je primeren za obstoječe zidovje! Priloženi vijaki in mozniki so primerni le za masivne zidove.

Uporabite lahko le pritrtilni material, primeren za opečnat zid! Priloženi vijaki in vložki so primerni samo za masiven zid.

Zmogljivost odtoka mora biti ustrezne velikosti.

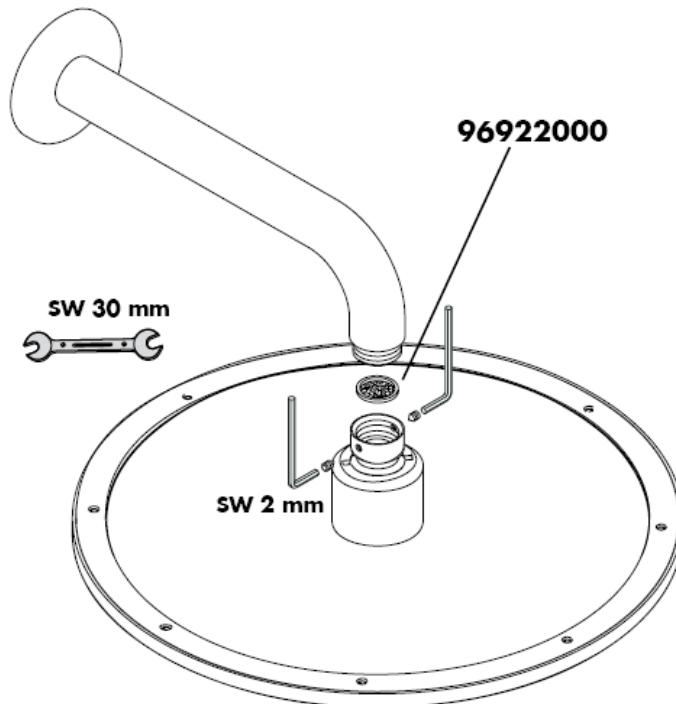

Optimalno delovanje je zagotovljeno le v povezavi s High Flow termostati Hansgrohe.

---

Filter, ki je priložen ročni prhi, je potrebno vgraditi, da prho zaščitimo pred umazanjem iz vodovodne napeljave. Umazanja lahko okvari ali poškoduje dele ročne prhe. Za tako nastalo škodo Hansgrohe ne odgovarja.

**Montaža**

**Pozor!** Armaturo je potrebno montirati, sprati in testirati v skladu z veljavnimi normami!

**Nastavitev**

Popravek je potreben, če se izmerjena temperatura pri izlivu razlikuje od na termostatu nastavljene temperature. Pri tem je treba upoštevati: Nastavitevno ročico obračajte, dokler temperatura vode na izlivu ni 38° C. Odvijte vijak na ročici, ročico odstranite in zavrtite do položaja 38° C. Ročico nataknite nazaj in zatisnite vijak (Glejte stran 22).

**Omeitev temperature**

Temperaturno območje je z varnostno zaporo omejeno na 38 °C (zaščita pred poparjenjem). Če želite višjo temperaturo, lahko zaporo prekorakite s pritiskom na varnostni gumb.

**Varnostna funkcija .**

Varnostna funkcija omogoča, da vnaprej nastavimo najvišjo želeno temperaturo npr. 42 °C. glejte stran 21.

**Tehnični podatki**

Delovni tlak:	max. 1 MPa
Priporočeni delovni tlak:	0,1 – 0,5 MPa
Preskusni tlak:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Temperatura tople vode:	max. 80° C
Priporočena temperatuta tople vode:	65° C
Pretok vode:	ca. 58 l/min 0,3 MPa

**Vzdrževanje**

Termostati ne potrebujejo posebnega vzdrževanja Delovanje protipovratnega ventila je potrebno v skladu z DIN EN 1717 in skladno z državnimi in regionalnimi določili (DIN 1988 enkrat letno) redno testirati. Ob tej priložnosti preverite tudi filtre, ki se nahajajo na enoti za uravnavanje MTC (6.1). Po montaži MTC-enote (6) nujno preverite temperaturo izliva, kot je to opisano pod točko "Justiranje". Pred tem nujno preverite, da je oskrba s toplo vodo vključena in da je maksimalna temperatura tople vode na mestu odvzema na voljo.

Da bi zagotovili gladko delovanje enote za uravnavanje, je potrebno termostat občasno nastaviti popolnoma na toplo in popolnoma na mrzlo.

**Rezervni deli** glejte stran 3

Alates • on funktsioneerimine garanteeritud

Silikoon (äädikhappeta!)

Tänu ohutusfunktsioonile on võimalik soovitud maksimaaltemperatuuri eelnevalt sisestada (nt maks. 42 °C).

#### Reguleerimine

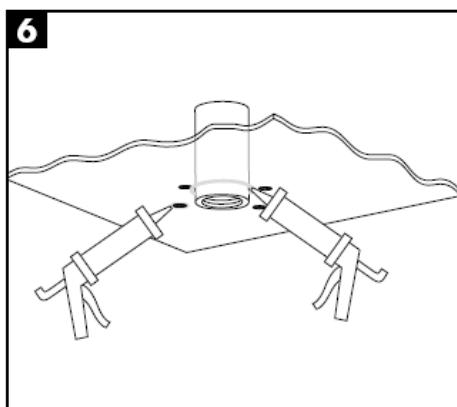

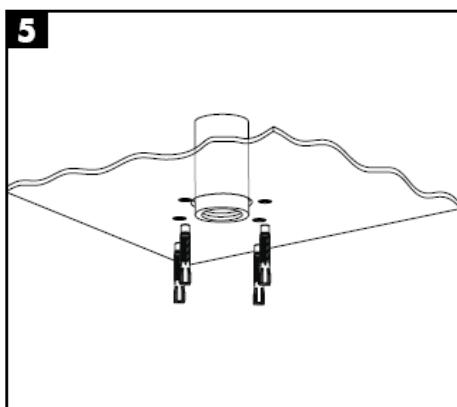

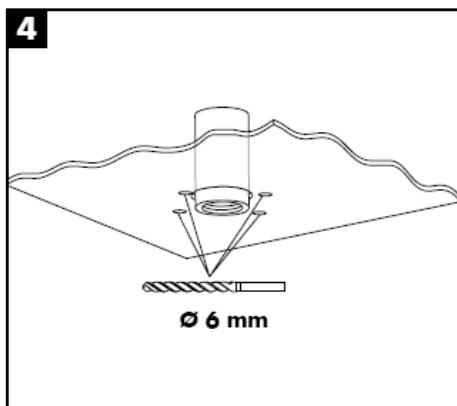

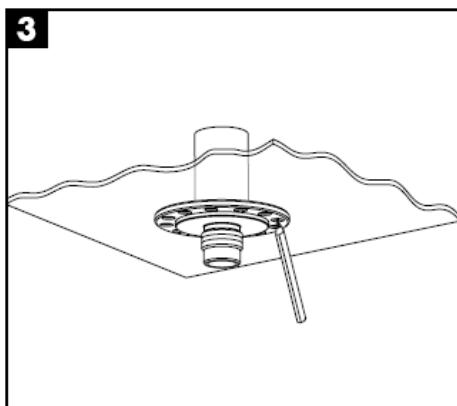

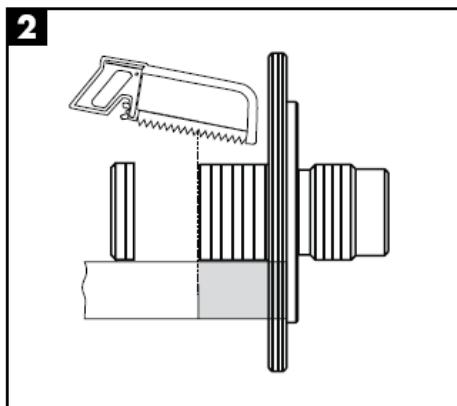

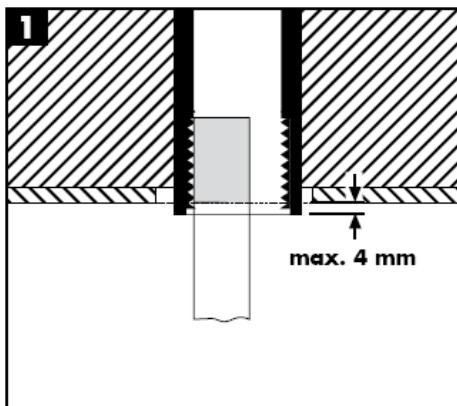

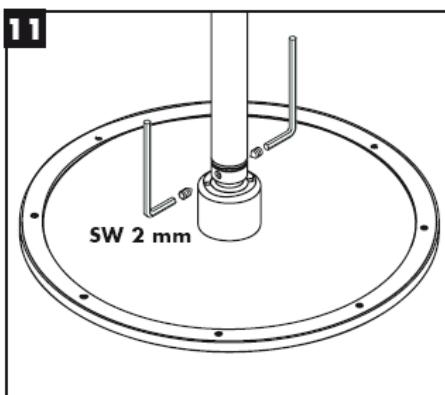

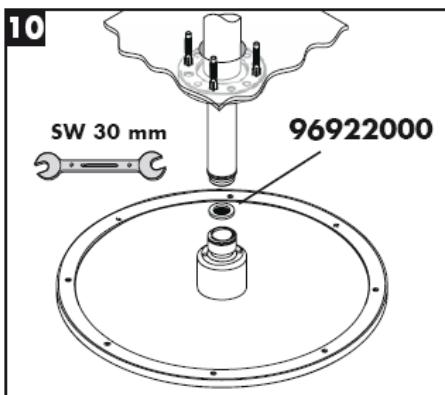

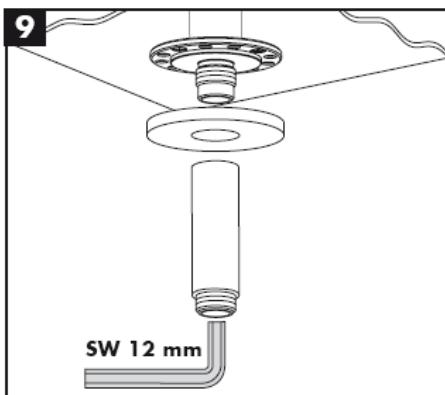

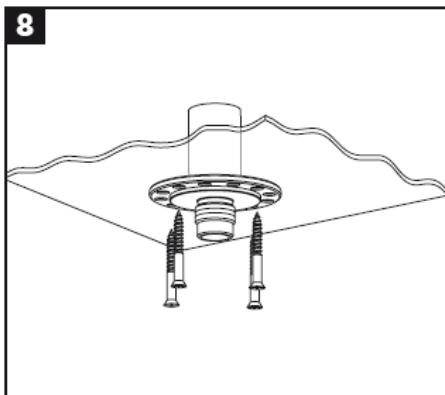

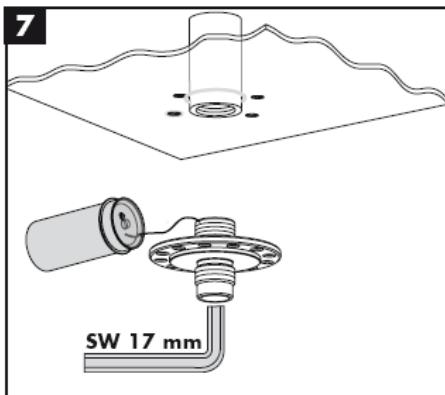

Kui dušš töötab, on selle kaal koos dušivarrega umbes 10 kg. Sellepärast võib kasutada ainult müüritise jaoks sobivat kinnitusmaterjali! Kaasasolevad kruvid ja tüüblid on ainult massiivse müüritise jaoks.

Kasutage ainult müüritise jaoks sobilikku kinnitusmaterjali! Kaasasolevad kruvid ja tüüblid on ette nähtud üksnes tavalisele müüritisele.

Äravoolu jõudlus peab olema piisav.

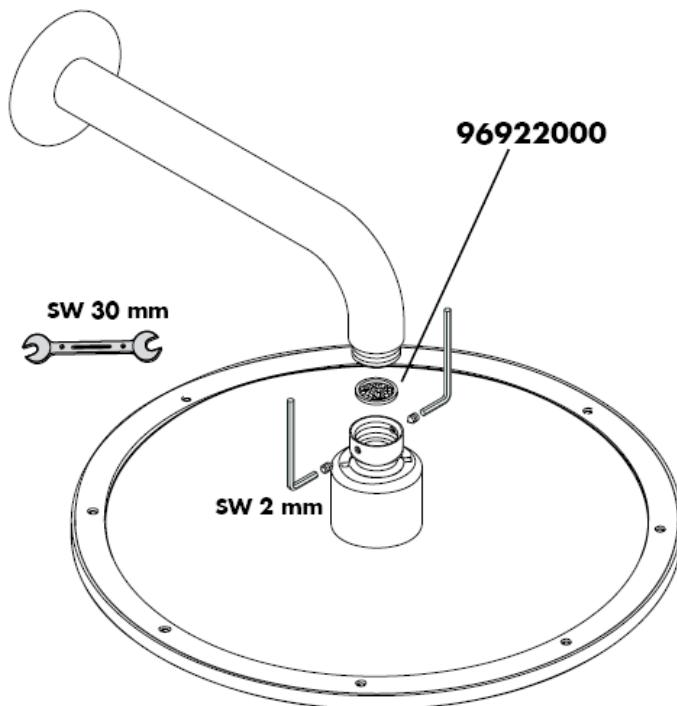

Optimaalne funktsioneerimine on garanteeritud ainult koos termostaatidega Hansgrohe High Flow.

---

Kaitsmaks duši torust tuleva mustuse eest, on vaja paigaldada dušiga kaasasolev mustusesõel. Sissetulev mustus võib funktsioneerimist kahjustada ja/või rikkuda duši detaile. Sellest tulenevate kahjude eest Hansgrohe ei vastuta.

## Paigaldamine

**Tähelepanu!** Segisti paigaldamine, loputamine ja kontroll peab toimuma vastavalt kehtivatele normidele!

## Reguleerimine

Kui väljavoolu temperatuur erineb termostaati sisestatust, on tarvis seda reguleerida. Selleks pöörake skaalaga pidet, kuni väljavoolu vesi on 38 °C. Eemaldage pideme kruvi, pöörake paigaldusnupp 38 °C peale. Asetage pide peale ja kruvige kinni (vt lk 22).

## Temperatuuri piirang

Turvatõkesti temperatuuri piirang on 38 °C (põletuse oht). Kui soovite kõrgemat temperatuuri, on võimalik ohutusnupu sissevajutamisega 38 °C piirang ületada.

## Turvafunksioon

Tänu ohutusfunktsoonile on võimalik soovitud maksimaaltemperatuuri eelnevalt sisestada (nt maks. 42 °C). vt lk 21.

## Tehnilised andmed

Töörõhk	max. 1 MPa
Soovitatav töörõhk:	0,1 – 0,5 MPa
Kontrollsurve:	1,6 MPa
(1 MPa = 10 baari = 147 PSI)	
Kuuma vee temperatuur:	max. 80 °C
Soovitatav kuuma vee temperatuur:	65 °C
Läbivool:	ca. 58 l/min 0,3 MPa

## Hooldus

Termostaadid ei vaja eri hooldust. Tagasilöögiklappide toimimist tuleb kooskõlas riiklike ja regionaalsete määrustega regulaarselt kontrollida vastavalt standardile DIN EN 1717 (DIN 1988 - kord aastas). Kontrollige sel puhul ka mustusefiltreid, mis asuvad MTC-regulaatori (6.1) peal. MTC-regulaatori paigaldamise järel kontrollige kindlasti ka väljavoolava vee temperatuuri, nagu kirjeldatud teema "Reguleerimine" all. Vaadake kindlasti enne järele, kas kuum vesi on sisse lülitatud ning kas maksimaalselt kuum vesi on veevõtukohal saadaval.

Termostaadi hea toimimise tagamiseks on tarvis termostaat keerata aeg-ajalt päris kuuma ja päris külma peale.

$X$  = Dušas paliktņa vidus

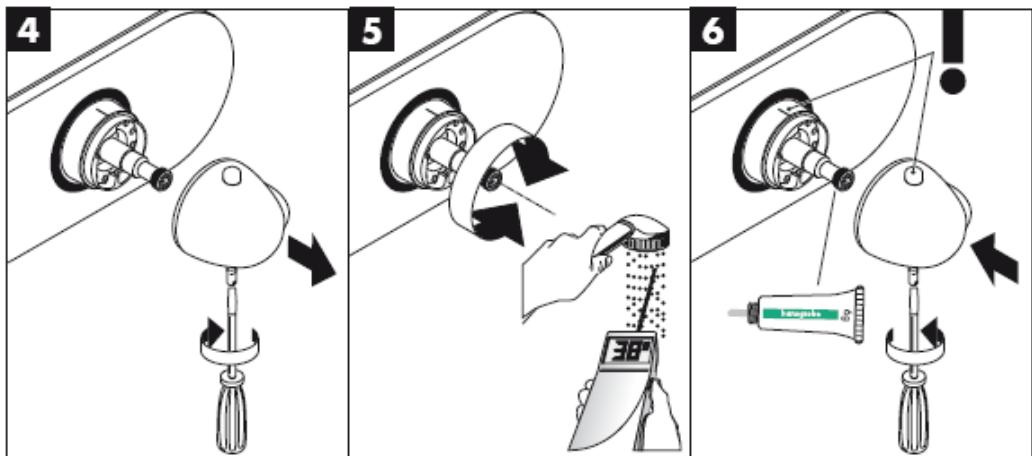

Silikons (etiķskābi nesaturošs!)

Pateicoties drošības funkcijai, vēlamo augstāko temperatūru, piem., maks. 42 °C, var iestatīt jau iepriekš.

Ieregulēšana

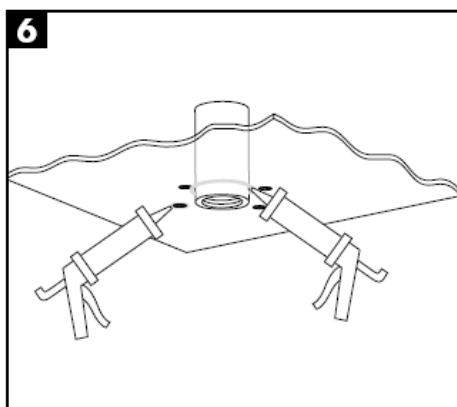

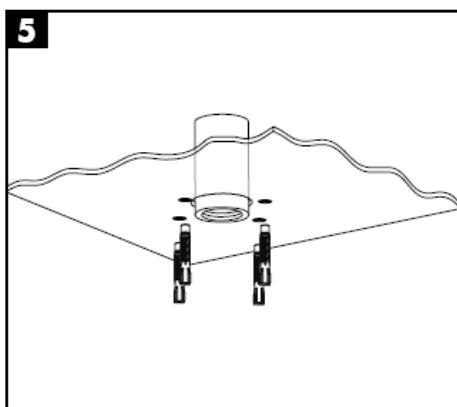

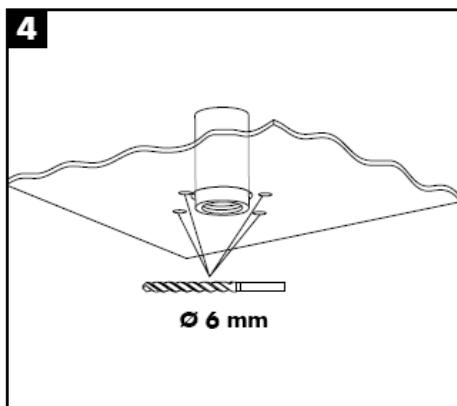

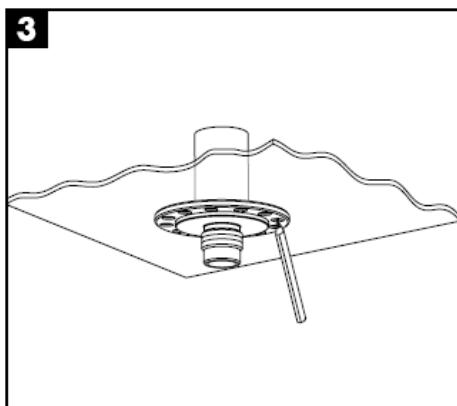

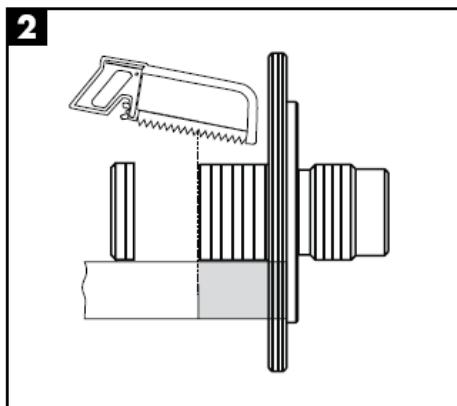

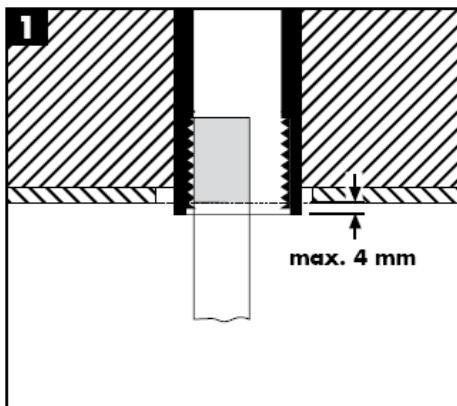

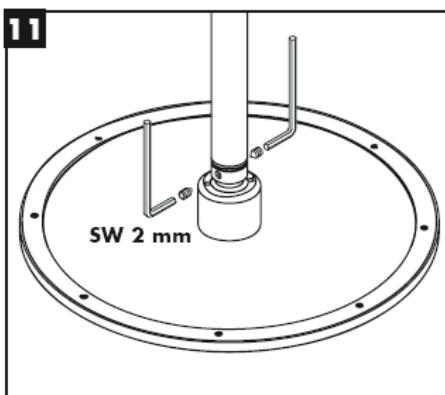

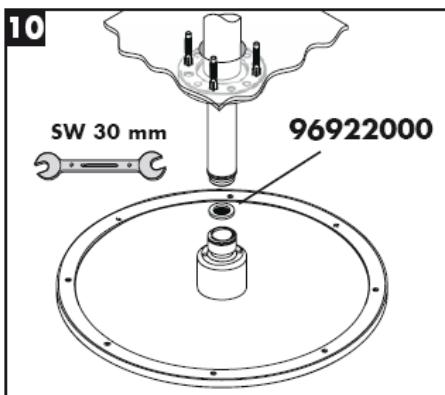

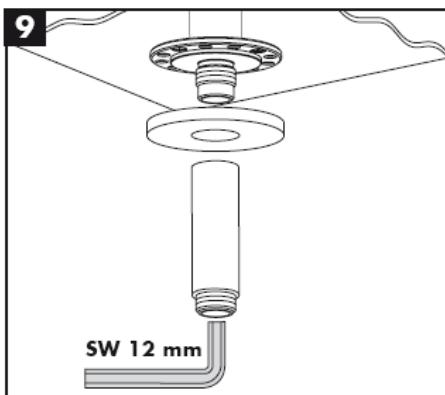

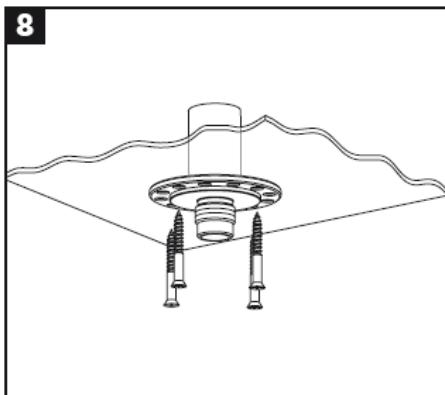

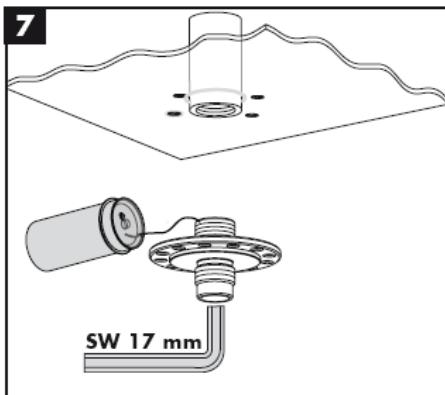

Ja duša darbojas, tad svars kopā ar dušas plecu ir apm. 10 kg. Tāpēc to drīkst izmantot tikai ar mūrniecības darbiem piemērotu nostiprināšanas materiālu! Pievienotās skrūves un aizturtapas ir paredzētas tikai masīviem mūrniecības darbiem.

Izmantot drīkst tikai mūrim piemērotus stiprinājumus! Komplektā esošās skrūves un dībelji ir paredzēti tikai masīvam mūrim.

Noplūdei jānodrošina pietiekama ūdens caurplūde.

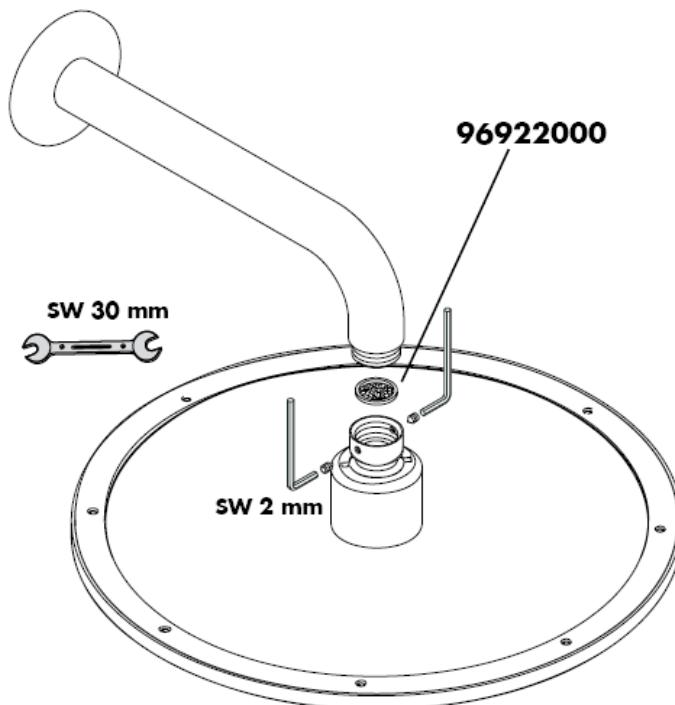

Optimāla funkcija tiek garantēta tikai tad, ja tiek izmantoti Hansgrohe "High Flow" termostati.

---

Jāiemontē dušas komplektā esošais filtrs, lai novērstu netīrumu ieplūšanu no ūdens vada. Ieskalotie netīrumi var traucēt dušas funkciju un / vai arī izraisīt rokas dušas daju bojājumus, par kuriem Hansgrohe nenes atbildību.

**Montāža**

**Uzmanību!** Armatūra jāuzstāda, jāizskalo un jāpārbauda atbilstoši spēkā esošajām normām!

**Ieregulēšana**

Korektūra ir nepieciešama gadījumā, ja ūdens temperatūra no maisītāja atšķiras no termostatā iestatītās temperatūras. Tādā gadījumā jārīkojas sekojoši: rokturi ar temperatūras skalu griež tik ilgi, līdz ūdens iztecešanas vietā ūdens sasniedzis 38 C. Atskrūvēt roktura skrūvi, rokturi pavilk atpakaļ un pagriezt līdz pozīcijai 38 C. Uzspraust rokturi un pievilk skrūvi (skat. 22. lpp.).

**Temperatūras ierobežošana**

Speciāls drošības elements ierobežo temperatūras diapazonu līdz 38 C (aizsardzība pret apdedzināšanos). Ja ir nepieciešama augstāka temperatūra, iespiežot drošības pogu, 38 C bloķēšana tiek pārtraukta.

**Drošības funkcija**

Pateicoties drošības funkcijai, vēlamo augstāko temperatūru, piem., maks. 42 C, var iestatīt jau iepriekš. skat. lpp. 21.

**Tehniskie dati**

Darba spiediens:	max. 1 MPa
Ieteicamais darba spiediens:	0,1 – 0,5 MPa
Pārbaudes spiediens:	1,6 MPa
(1 MPa = 10 bar = 147 PSI)	
Karstā ūdens temperatūra:	max. 80° C
Ieteicamā karstā ūdens temperatūra:	65° C
Caurceces intensitāte:	ca. 58 l/min 0,3 MPa

**Apkope**

Termostatiem nav nepieciešama ūpaša apkope. Regulāri jāpārbauda pretvārsta funkcija saskaņā ar DIN EN 1717 saistībā ar nacionālajiem vai vietējiem noteikumiem (DIN 1988 vienreiz gadā). Pārbaudiet arī filtrus, kas atrodas uz MTC regulatora (6.1). Pēc MTC regulatora (6) montāžas obligāti jāpārbauda ūdens temperatūra pēc principa, kas aprakstīts punktā "Ieregulēšana". Pirms tam obligāti pārbaudiet, vai ir pieslēgtā karstā ūdens padeve un vai ūdens padeves vietā ir maksimāla karstā ūdens temperatūra.

Lai nodrošinātu regulatora nevainojamu darbību, termostatu laiku pa laikam jāiestata uz maksimāli aukstu un maksimāli karstu ūdeni.

**Rezerves daļas** skat. lpp. 3

Neophodno ojačanje zida za pričvršćenje ruke tuša

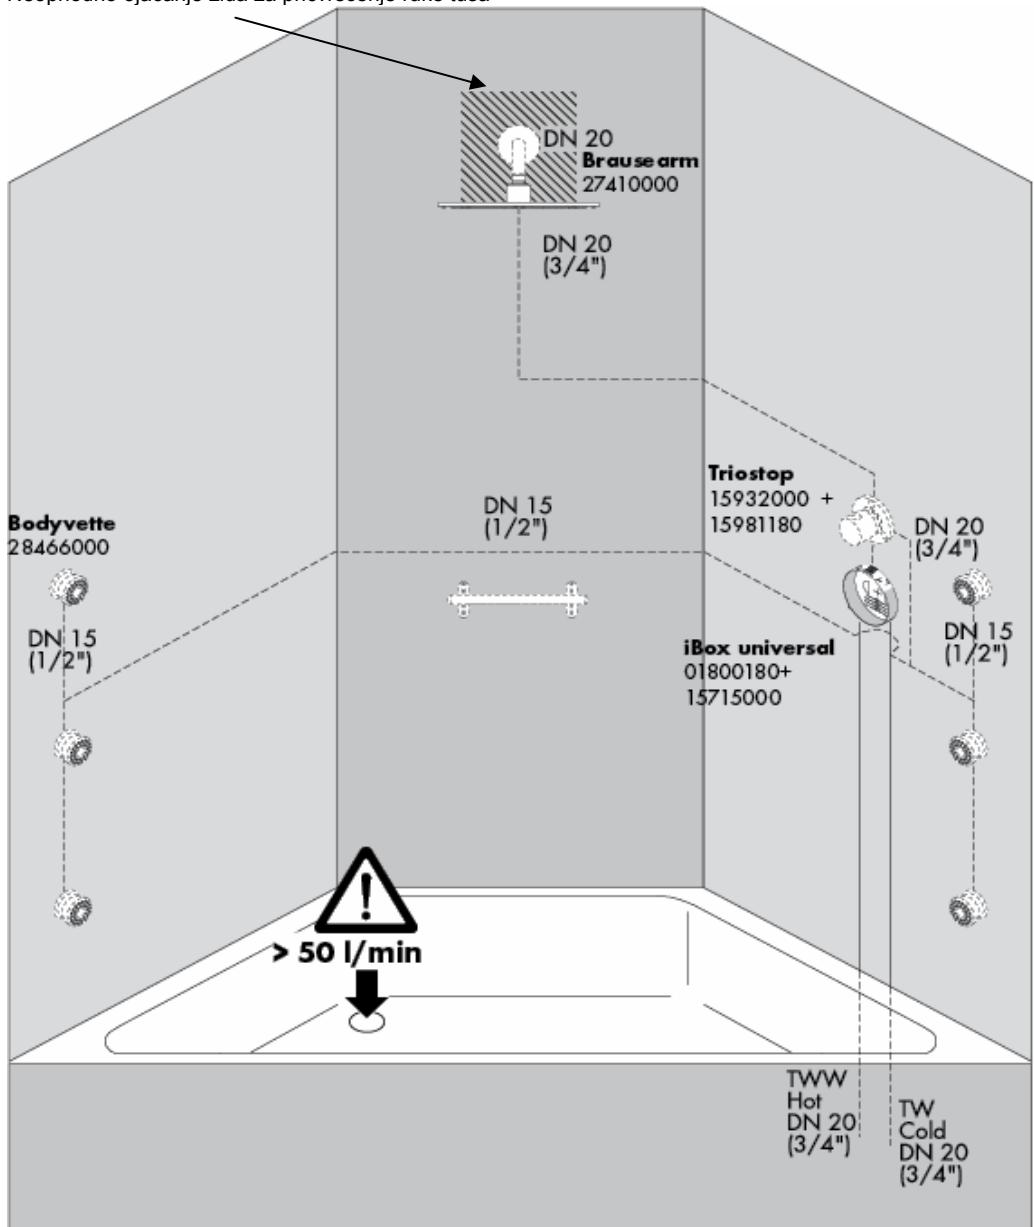

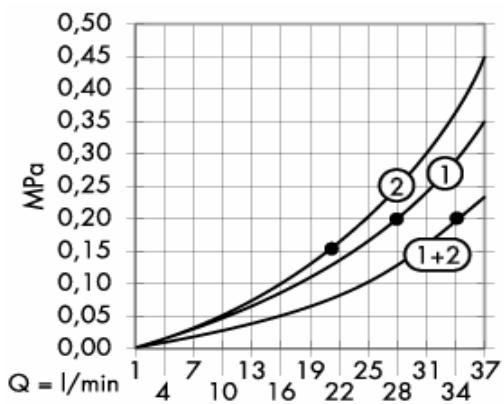

Od • je funkcija zagarantovana.

Silikon (ne sadrži sirčetnu kiselinu!)

Zahvaljujući Safety funkciji, može se podešiti željena maksimalna temperatura, npr. maks. 42 °C.

#### Podešavanje

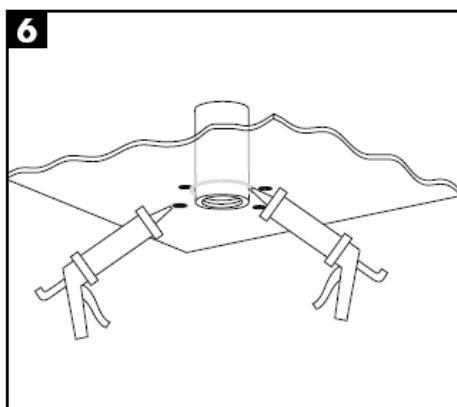

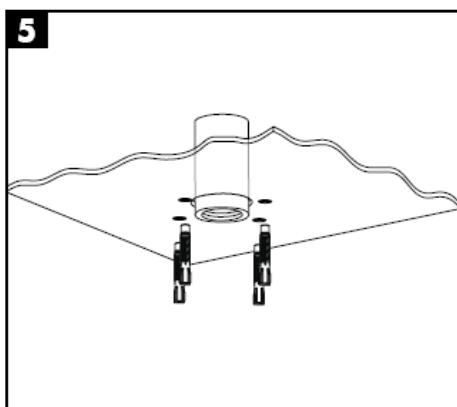

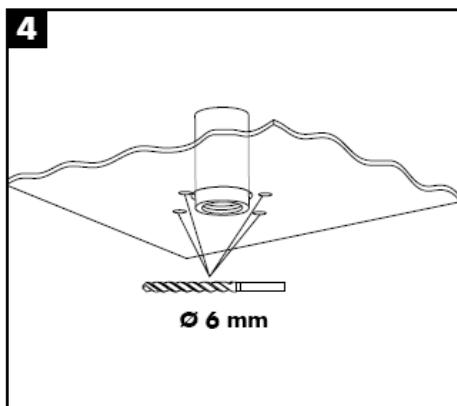

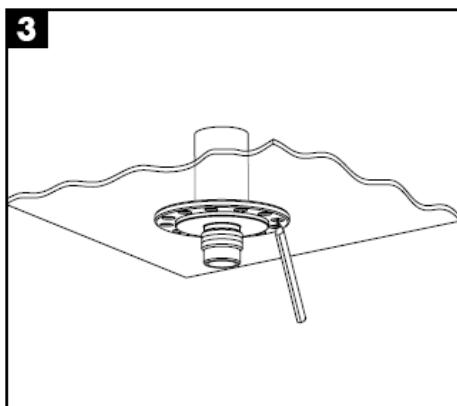

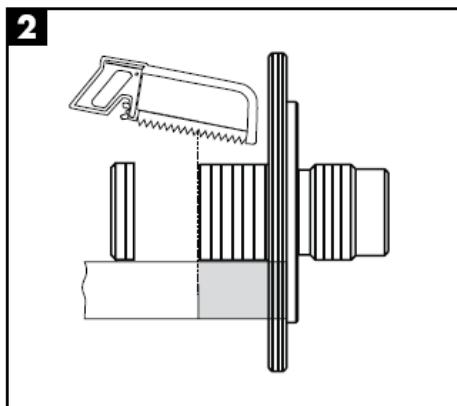

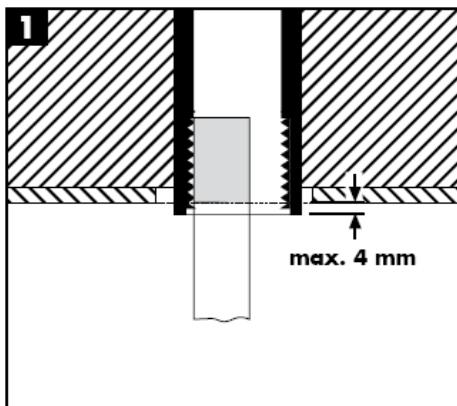

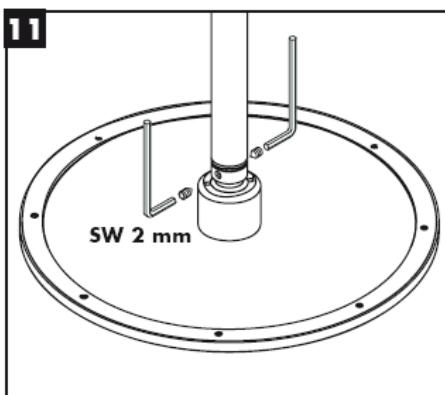

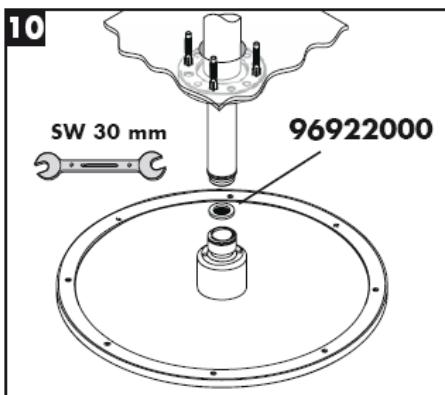

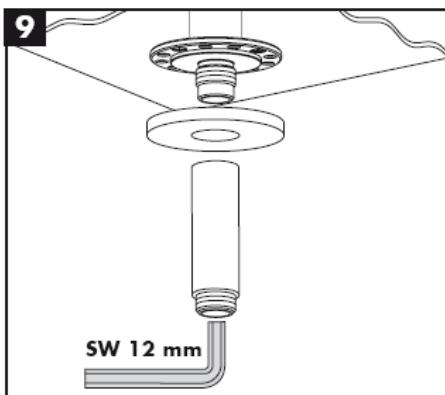

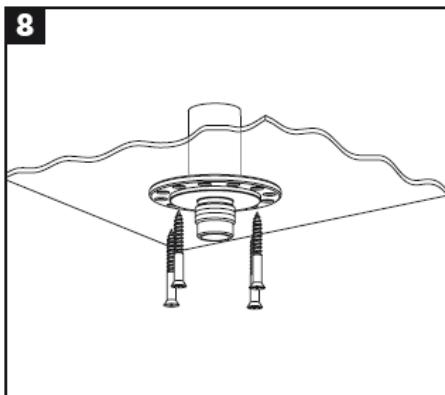

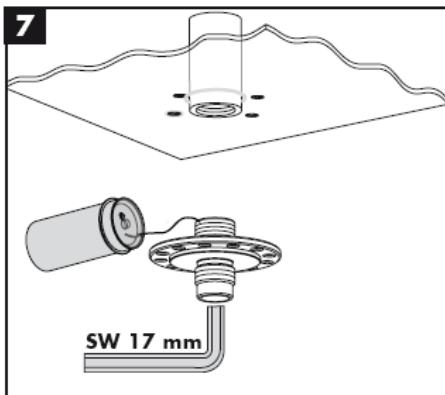

Tuš koji radi, zajedno sa nosačem tuša, težak je oko 10 kg. Zbog toga se sme koristiti samo materijal podesan za pričvršćivanje na postojeći zid! Priloženi zavrtnji i moždanici prikladni su samo za masivne zidove.

Smete koristiti jedino materijal prikladan za pričvršćivanje na postojeći zid. Priloženi zavrtnji i tiplovi prikladni su samo za masivne zidove.

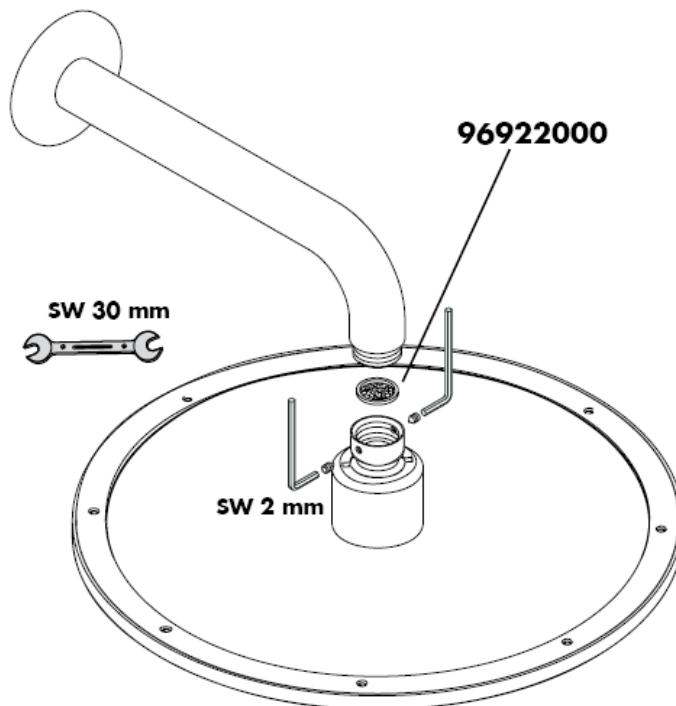

Mora se predvideti dovoljan kapacitet odvoda.

Optimalna funkcija garantovana je samo u kombinaciji s Hansgrohe High Flow termostatima.

Obavezno ugradite mrežicu upakovani s tušem, čime sprečavate ulazak prljavštine iz vodovoda. Prljavština može dovesti do delimičnog ili potpunog oštećenja delova tuša. Za eventualna oštećenja uzrokovana prljavštinom proizvođač Hansgrohe nije odgovoran.

**Montaža**

**Pažnja!** Armatura mora biti postavljena, isprana i testirana prema važećim normama!

**Podešavanje**

Korekcija je neophodna ako izmerena temperatura odstupa od temperature koja je nameštena na termostatu. Pritom treba obratiti pažnju na sledeće:

Okrećite skalu ručice sve dok ne počne izlaziti voda temperature 38 °C. Odvrnite zavrtanj ručice, povucite ručicu i okrenite je do pozicije 38 °C. Zatim ponovno nataknite ručicu i pričvrstite zavrtanj (vidi stranu 22).

**Ograničavanje temperature**

Temperaturu pomoću sigurnosne blokade možete ograničiti na 38 °C (zaštita od opekotina vrućom vodom).

Ukoliko želite temperaturu višu od 38 °C, pritiskom na dugme deaktivirate sigurnosnu blokadu.

**Safety funkcija**

Zahvaljujući Safety funkciji, može se podešiti željena maksimalna temperatura, npr. maks. 42 °C. vidi stranu 21.

**vidi stranu**

Radni pritisak: max. 1 MPa

Preporučeni radni pritisak: 0,1 – 0,5 MPa

Probni pritisak: 1,6 MPa

(1 MPa = 10 bar = 147 PSI)

Temperatura vruće vode: max. 80 °C

Preporučena temperatura vruće vode: 65 °C

Protok vode: ca. 58 l/min 0,3 MPa

**Održavanje**

Nije potrebno posebno održavanje termostata. Ispravno funkcionisanje nepovratnog ventila se mora redovno proveravati prema standardu DIN EN 1717 i u skladu s važećim nacionalnim ili regionalnim propisima (DIN 1988 jednom godišnje). Takođe ispitajte ispravnost hvatača prljavštine koji se nalazi na MTC regulacionoj jedinici. (6.1). Posle instalacije MTC regulacione jedinice (6) obavezno proverite izlaznu temperaturu vode na slavini, kao što je opisano pod tačkom "Podešavanje". Pre toga svakako ispitajte da li je uključen sistem za snabdevanje toploim vodom i izlazi li na probnom mestu voda s maksimalnom temperaturom.

Kako bi se olakšala prohodnost i produžio vek trajanja regulacione jedinice, potrebno je s vremenom na vreme podešiti termostat na položaje za maksimalno toplu i maksimalno hladnu vodu.

F.o.m. • er funksjonen garantert

Silikon (uten eddiksyre)

Takket være egenskapen "Safety Function" kan det forhåndsinnstilles en ønsket maks. temperatur, f.eks. 42 C.

#### Justering

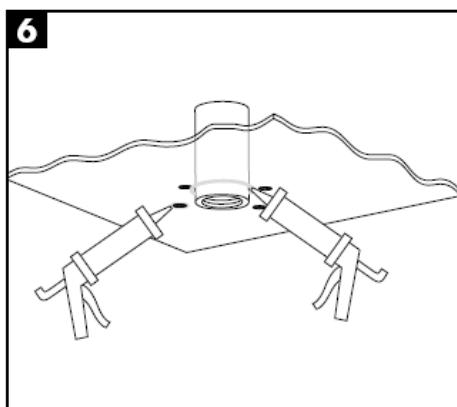

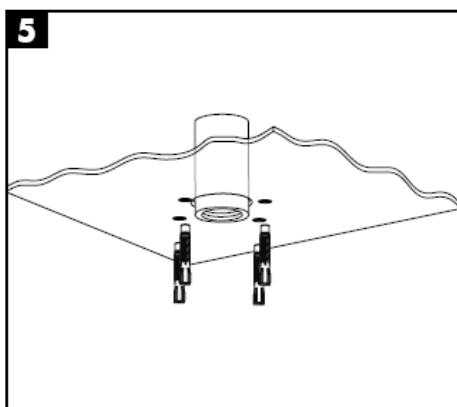

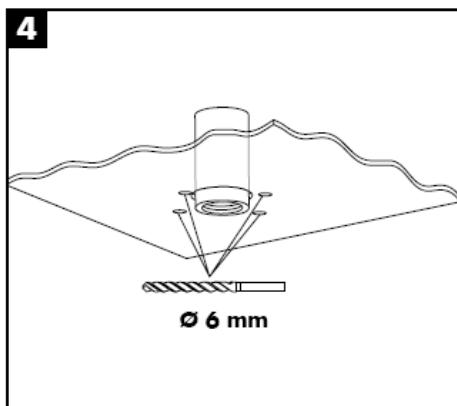

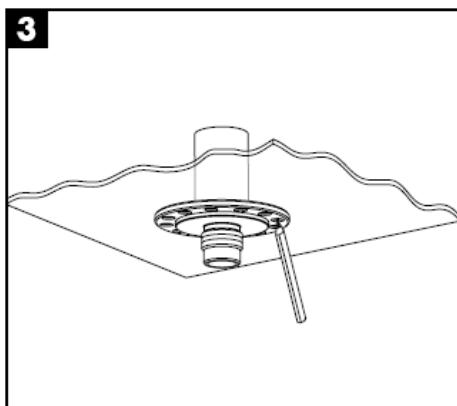

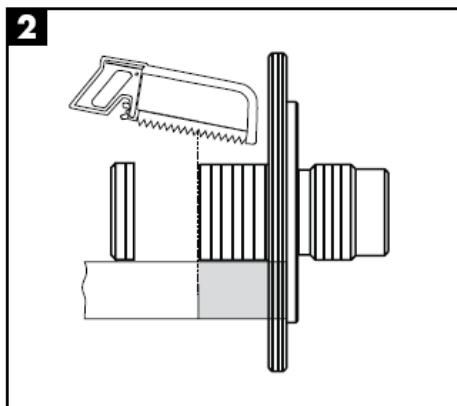

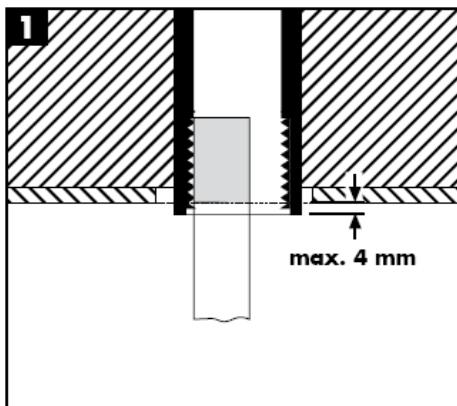

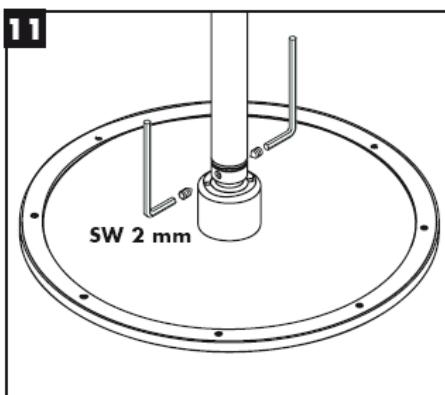

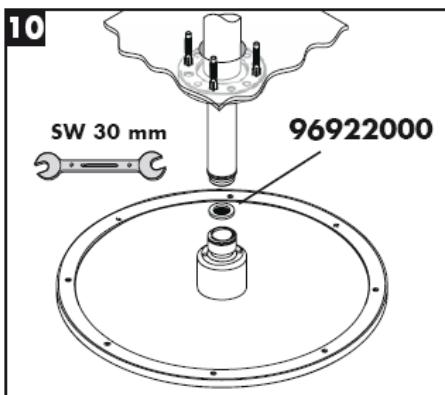

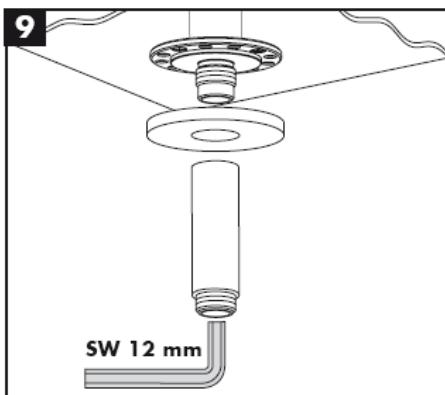

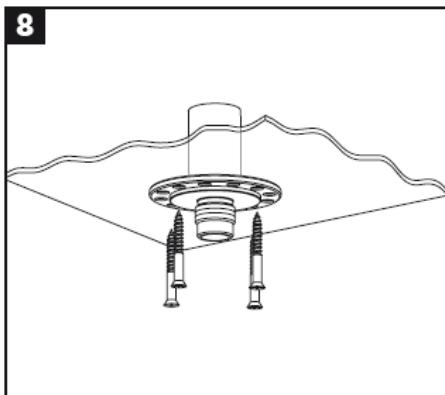

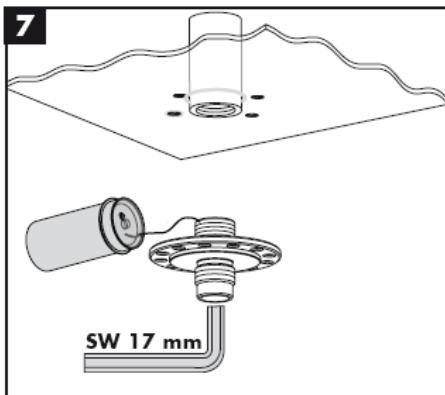

Når dusjen er i funksjon har den sammen med dusjarmen, en vekt på omtrent 10 kg. Derfor skal det kun brukes festematerial som er egnet for murverket! Medleverte skruer og plugger egner seg kun for massivt murverk.

Det skal kun brukes festematerial som er egnet for murverket! Medleverte skruer og plugger egner seg kun for massivt murverk.

Utløpsytelsen skal være tilstrekkelig dimensjonert.

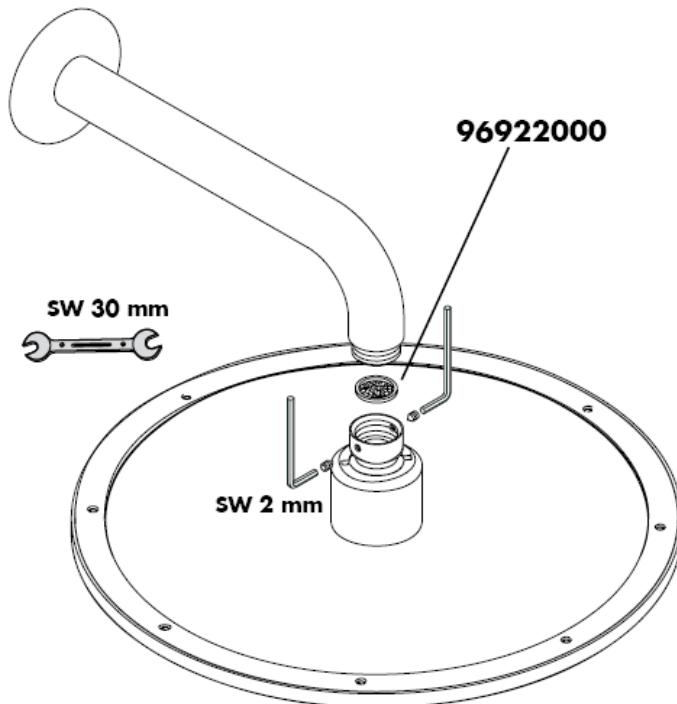

Optimal funksjon garanteres kun i forbindelse med Hansgrohe High Flow termostater.

---

Silpakningen som er levert med dusjen skal bygges inn for å forhindre at smuss spyles inn fra ledningsnettet. Innspilt smuss kan påvirke funksjonen negativt og/eller kan medføre skader på hånddusjens funksjonsdeler. Hansgrohe påtar seg inget ansvar for skader som resulteres av dette.

**Montasje**

**Obs!** Armaturen skal monteres iht. gyldige standarder. De skal spyles og sjekkes!

**Justering**

Det er nødvendig med korrektur når temperaturen målt ved uttaksstedet avviker fra temperaturen som er innstilt på termostaten. Her skal man passe på følgende: Skalegrep dreies inntil vann med 38 °C kommer ut av uttaksstedet. Grepskruen løsnes, grepet trekkes tilbake og dreies til stilling for 38 °C. Grep settes på igjen og grepskruen trekkes fast (se side 22).

**Temperaturbegrensning**

Temperaturområdet begrenses til 38 °C ved hjelp av sikkerhetssperren. Ønsker man en høyere temperatur enn 38 °C kan sperren deaktivertes ved trykk på sikkerhetsknappen.

**Safety Function**

Takket være egenskapen "Safety Function" kan det forhåndsinnstilles en ønsket maks. temperatur, f.eks. 42 °C. se side 21.

**Tekniske data**

Tekniske data	max. 1 MPa
Anbefalt driftstrykk:	0,1 – 0,5 MPa
Prøvetrykk	1,6 MPa
(1 Mpa = 10 bar = 147 PSI)	
Varmtvannstemperatur	max. 80° C
Anbefalt temperatur for varmt vann	65° C
Gjennomstrømningsytelse:	ca.58 l/min 0,3 MPa

**Vedlikehold**

Termostater trenger ikke noe spesielt vedlikehold. Funksjonen til returløpssperren skal iht. DIN EN 1717 og i samsvar med de nasjonale og lokale forskrifter sjekkes regelmessig (DIN 1988 en gang i året). Ved denne anledningen skal du også sjekke smussfangere som finns på MTC regulerings-enheten (6.1). Etter montering av MTC regulerings-enheten (6) skal utløpstemperaturen absolutt sjekkes som beskrevet under punkt "Justeringer". Sjekk i hvert tilfelle at vannforsyningen er slått på og at den maksimale varmtvannstemperaturen ligger opp til tappestedet.

For å holde regulerings-enheten bevegelig, skal termostaten stilles fra tid til annen på helt varmt og helt kaldt.

Силикон (без оцетна киселина!)

Благодарение на Safety Function (функция за безопасност) желаната максимална температура може да се настрои предварително напр. на макс. 42 С.

Юстиране

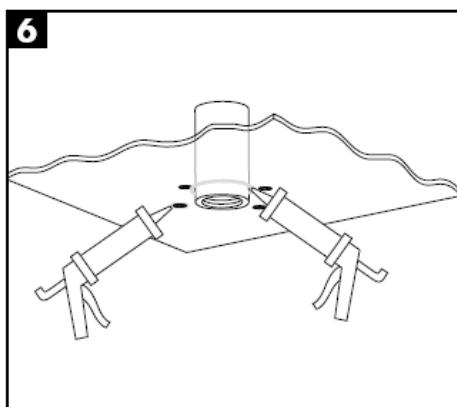

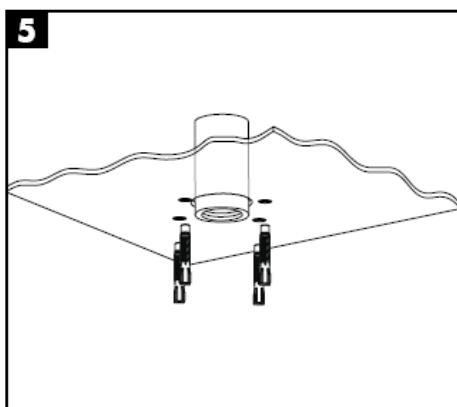

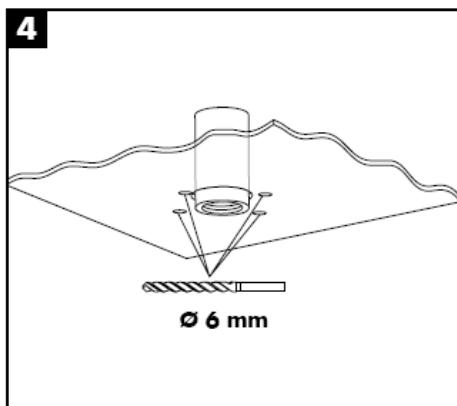

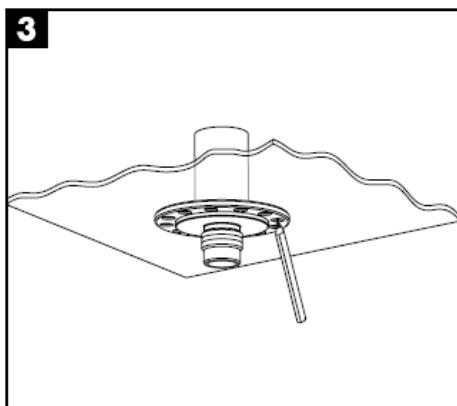

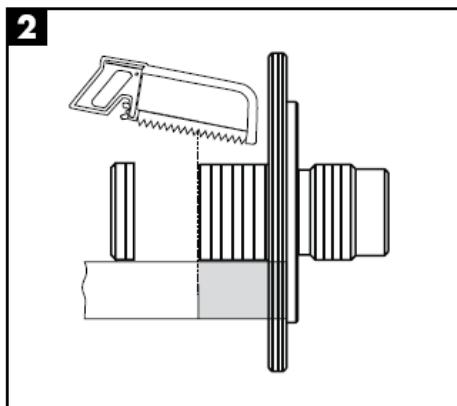

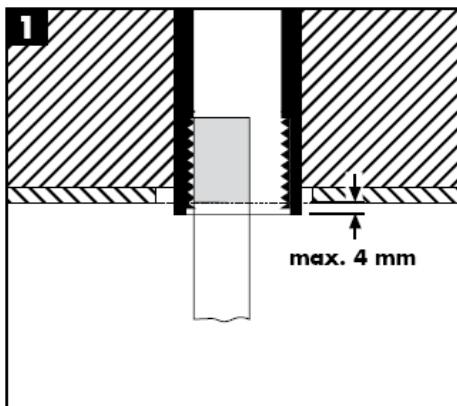

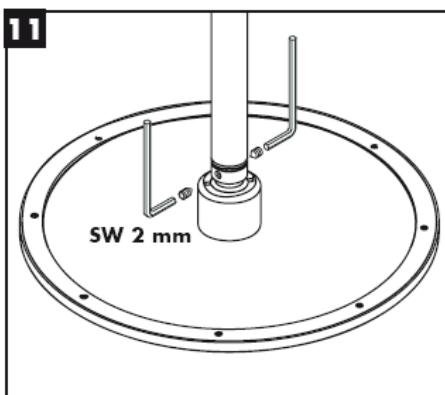

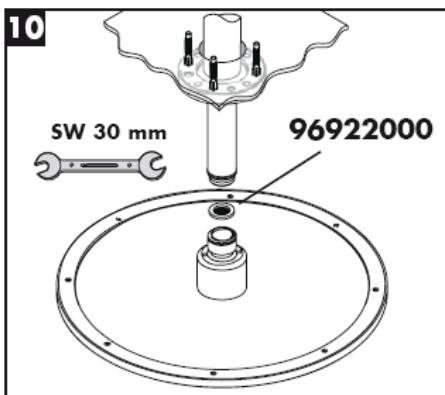

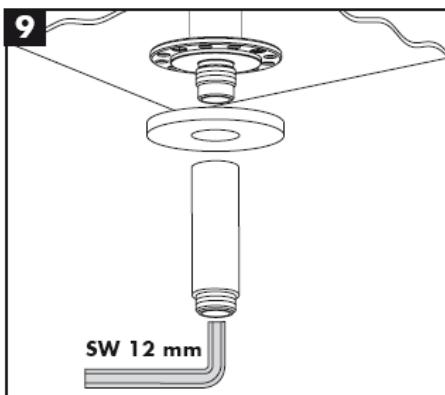

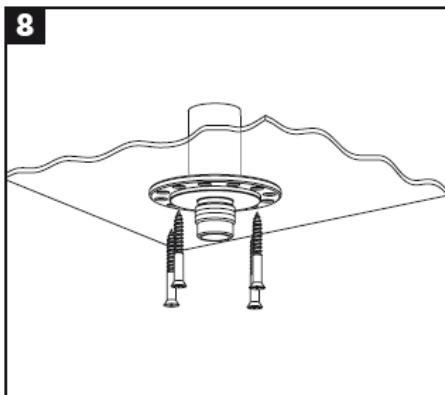

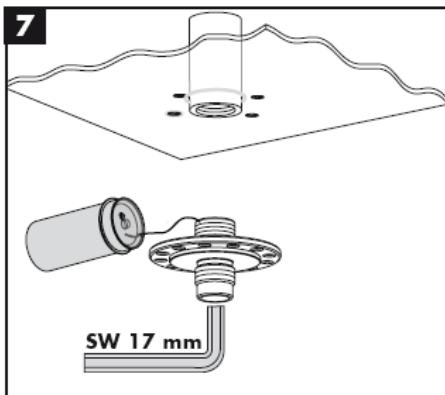

Когато разпръсквателят функционира, той заедно с рамото на разпръсквателя има тегло от прибл. 10 кг. Поради това е позволено единствено използване на подходящи за мазилки материали за закрепване! Приложените винтове и дюбели са само за масивна зидария.

Позволено е единствено използване на подходящи за мазилки материали за закрепване! Приложените винтове и дюбели са само за масивна зидария.

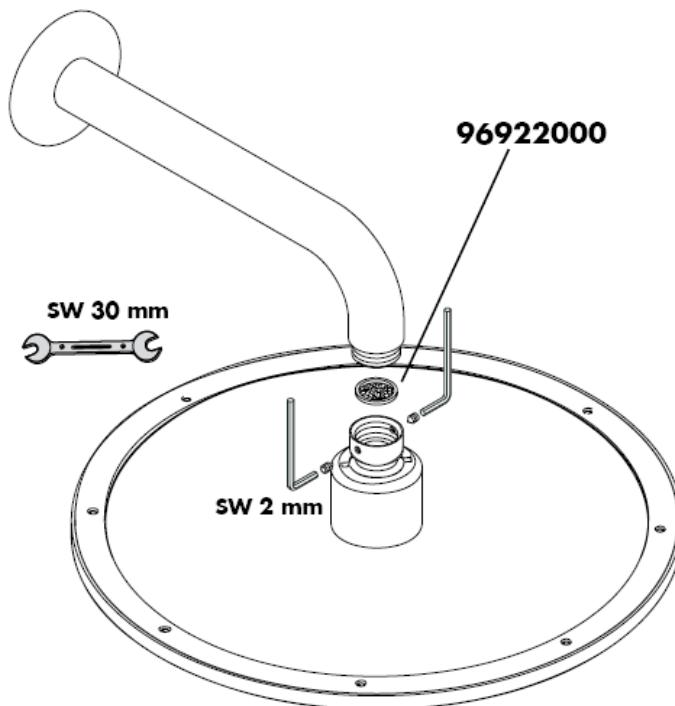

Трябва да се изчисли достатъчна мощност на изтичане.

Оптималното функциониране се гарантира само във връзка с термостати Hansgrohe High Flow.

Опакованото заедно с разпръсквателя уплътнение с цедка трябва да се монтира, за да се избегне натрупване на замърсявания от водопроводната мрежа. Натрупването на замърсявания може да наруши функцията и/или да доведе до увреждания на функционалните части на разпръсквателя, Hansgrohe не носи отговорност за получилите се по този начин щети.

**Монтаж**

**Внимание!** Арматурата трябва да се монтира, промие и провери в съответствие с валидните норми!

**Юстиране**

Ако измерената температура на мястото на водовземане се различава от настроената на термостата температура, е необходима корекция. При това да се има пред вид следното: Завъртете ръкохватката със скала, докато на мястото на водовземане изтече вода с 38 С. Развийте винта на ръкохватката, издъргайте назад ръкохватката и я завъртете до положението 38 С. Поставете ръкохватката и затегнете винта на ръкохватката (вижте стр. 22).

**Ограничение на температурата**

Температурният диапазон се ограничава до 38 С с помощта на обезопасителна бариера (защита от попарване). Ако желаете по-висока температура, бариерата от 38 С може да се надвиши с натискане на копчето за обезопасяване.

**Safety Function (Функция за безопасност)**

Благодарение на Safety Function (функция за безопасност) желаната максимална температура може да се настрои предварително напр. на макс. 42 С. вижте стр. 21.

**Технически данни**

Работно налягане: max. 1 МПа  
 Работно налягане: 0,1 – 0,5 МПа  
 Контролно налягане: 1,6 МПа  
 (1 МПа = 10 bar = 147 PSI)

Температура на горещата вода: max.80° С  
 Препоръчителна температура на горещата вода:

65° С  
 Мощност на потока: ca.58 l/min 0,3 МПа

**Поддръжка**

Термостатите не се нуждаят от специална поддръжка Съгласно DIN EN 1717 редовно трябва да се проверява функционирането на приспособленията за предотвратяване на обратния поток в съответствие с националните или регионални изисквания (DIN 1988 веднъж годишно). При тази възможност проверявайте и уловителите на мръсотия, които се намират на регулиращия елемент MTC (6.1). След монтажа на регулиращото звено MTC (6) непременно проверете температурата на изхода, както е описано в точка „Настройка“. Непременно проверете предварително, дали захранването с топла вода е включено и дали на мястото на източване е налична макс. температура на топлата вода.

За да се гарантира лекоподвижността на регулиращото звено, от време на време термостатът трябва да се поставя на максимално топло и на максимално студено.

**Сервизни части вижте стр. 3**

Silikon (pa acid uthulle!)

Falë Safety Function mund t  p rcaktohet temperatura maksimale e d shiruar, p.sh. 42 C.

Justimi

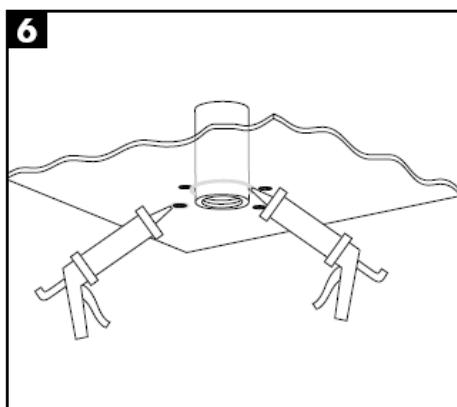

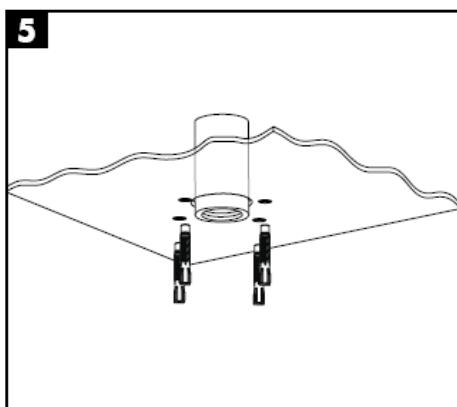

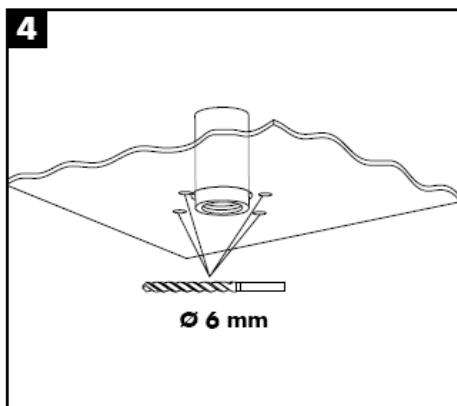

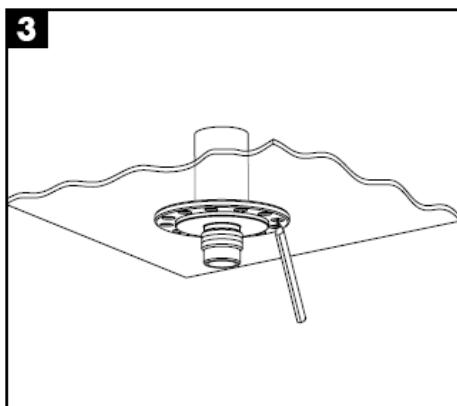

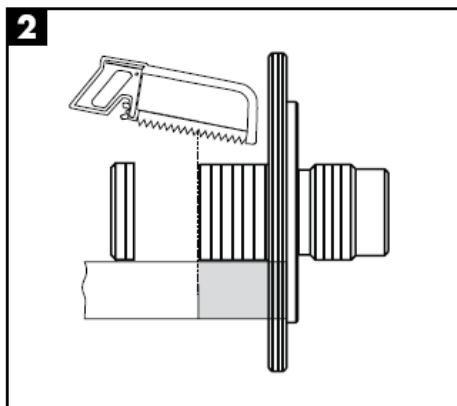

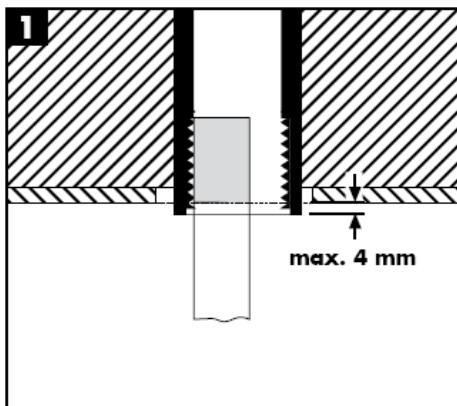

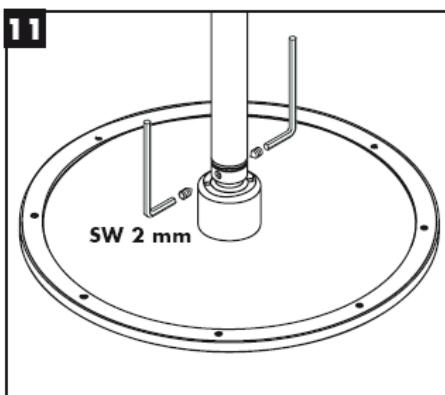

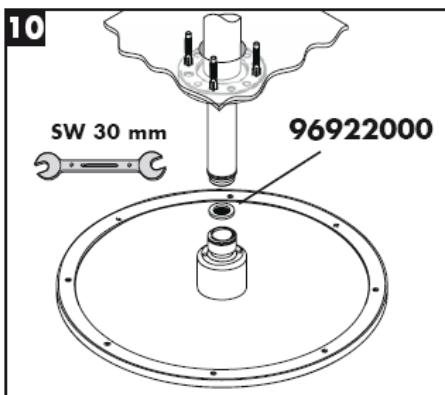

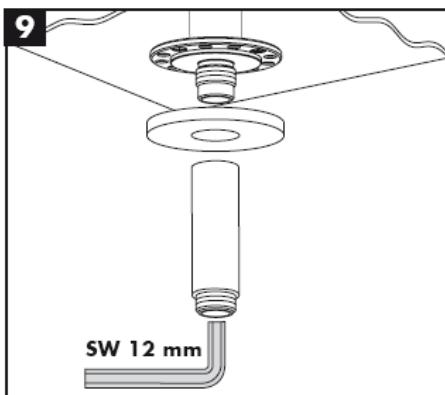

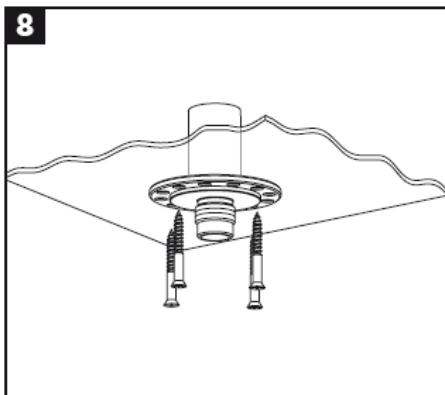

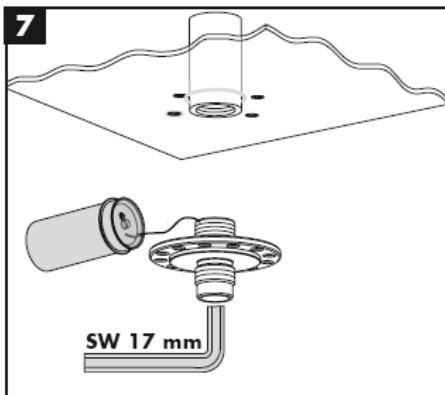

Nëse spërkatësja është në funksion, atëherë ajo së bashku me krahun e spërkatëses peshon 10 kg. Mund të përdoret vetëm material i përshtatshëm për montimin në mure! Vidat dhe dadot e bashkëngjitura janë vetëm për mure masive.

Mund të përdoret vetëm material i përshtatshëm për montimin në mure! Vidat dhe dadot e bashkëngjitura janë vetëm pér mure masive.

Kapaciteti i rrjedhjes duhet dimensionuar në mënyrë të mjaftueshme.

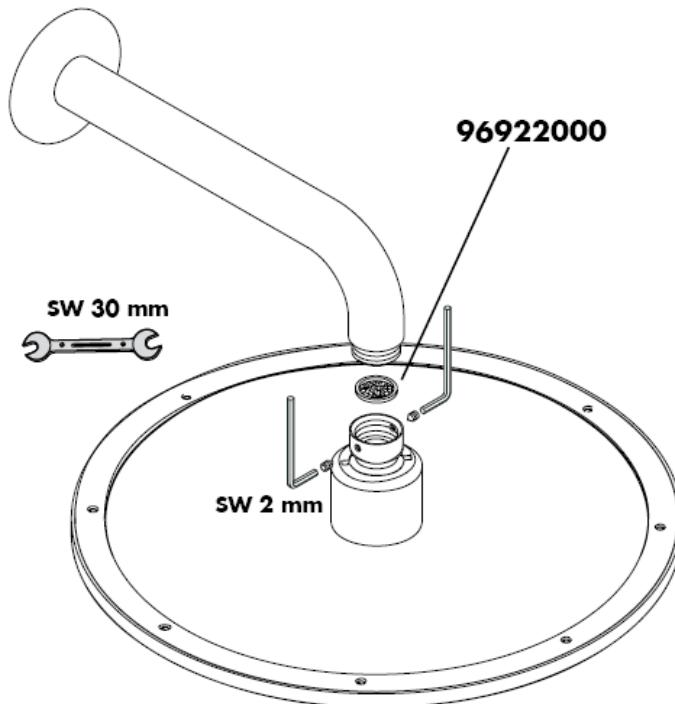

Funksionimi optimal garantonohet vetëm në kombinim me termostatet High Flow të Hansgrohe.

---

Sita që i kemi bashkëngjitur spërkatëses duhet përdorur për të evituar thithjen e papastërtive nga rrjeti i ujësjellësit. Ndotjet mund të dëmtojnë pjesë funksionale të spërkatëses. Hansgrohe nuk merr përgjegjësinë për dëmet e shkaktuara në këtë mënyrë.

**Montimi**

**Kujdes!** Armatura duhet montuar, shpërlarë dhe kontrolluar në bazë të normave të vlefshme!

**Justimi**

Korrigimet janë të nevojshme, nëse temperatura e matur në pikën e rrjedhjes së ujit nuk është e njëjtë me temperaturën e përcaktuar në termostat. Gjatë kësaj duhet pasur parasysh: Rrotulloni dorezën e shkallëzimeve deri sa në pikën e rrjedhjes të rrjedhë ujë me temperaturë 38 °C. Lironi vidhën e dorezës, tërhiqeni dorezën dhe çojeni në pozicionin 38 °C. Vendoseni përsëri dorezën në vend dhe shtrëngoni vidën (shih faqen 22).

**Kufizimi i temperaturës**

Zona e temperaturës kufizohet me anë të bllokadës së sigurisë në 38 °C (ruajta nga përvëlimi).

Nëse dëshironi të keni një temperaturë më të lartë, atëherë mund të kalohet kufiri i caktuar prej 38 °C duke shtypur butonin e sigurisë.

**Funksionet e sigurisë**

Falë Safety Function mund të përcaktohet temperatura maksimale e dëshiruar, p.sh. 42 °C. shih faqen 21.

**Të dhëna teknike**

Presioni gjatë punës max. 1 MPa

Presioni i rekomanduar: 0,1 – 0,5 MPa

Presioni i rekomanduar: 1,6 MPa

(1 MPa = 10 bar = 147 PSI)

Temperatura e ujit të ngrohtë max.80° C

Temperatura e rekomanduar e ujit të ngrohtë:65° C

Kapaciteti i rrjedhjes: ca.58 l/min 0,3 MPa

**Mirëmbajtja**

Termostatet nuk kanë nevojë për mirëmbajtje të posaçme. Penguesit e rrjedhjes në drejtim të kundërt duhen kontrolluar rregullisht në bazë të normave DIN EN 1717 konform normave nationale dhe regionale (DIN 1988 një herë në vit). Kontrolloni me këtë rast edhe mbledhësit e papastërtive të cilët ndodhen në njësinë rregulluese MTC (6.1). Pas montimit të njësisë rregulluese MTC kontrolloni patjetër temperaturën në dalje, siç e kemi përshkruar në pikën "justimi". Para kësaj kontrolloni patjetër se a është i ndezur furnizimi me ujë të ngrohtë dhe a është caktuar temperatura maksimale në pikën që del uji i ngrohtë.

Për të lehtësuar përdorimin e njësisë rregulluese, termostati do të duhej çuar herë pas here nga shumë i ngrohtë në shumë të ftotë.
